Embryo Research in Pluralistic Europe D. Solter, D. Beylerveld, M.B. Friele, J. Holówka, H. Lilie, R. Lovell-Badge, C. Mandla, U. Martin, R. Pardo Avellaneda, 2013-03-09 Recent advances in techniques and understanding in the fields of genetics embryology and reproductive biology have opened up new ways to treat a wide range of medical problems They range from new options for infertility treatment and pre implantation genetic diagnosis to stem cell based therapies for debilitating diseases Since all these approaches involve the manipulation of human gametes embryos or embryonic cells and could also permit more contentious uses they have stimulated a controversial debate as to what aims are desirable and to what extent experiments on human embryos are morally permissible if permissible at all The situation is further complicated by the fact that scientific projects are increasingly realized through international co operation and that patients are increasingly ready to seek morally contentious medical treatment wherever it is available and thus to bypass national legislation In view of this situation the Europ ische Akademie assembled a temporary interdisciplinary project group in which scientists from universities and non university research organizations in Europe working on the relevant subjects were brought together and charged with establishing a knowledge base and providing suggestions for long term solutions that would be acceptable for society Presented here are the results of this project ranging from a discussion of the theoretical and practical possibilities in human embryo experimentation and its alternatives in research on adult stem cells a comparison of the situations and prospects of regulation of embryo research in Europe a survey of European public attitudes and a philosophical analysis of the arguments and argumentative strategies used in the debate

*Empirically Informed Ethics: Morality between Facts and Norms* Markus Christen,Carel van Schaik,Johannes Fischer,Markus Huppenbauer,Carmen Tanner,2013-10-07 This volume provides an overview of the most recent developments in empirical investigations of morality and assesses their impact and importance for ethical thinking It involves contributions of scholars both from philosophy theology and empirical sciences with firm standings in their own disciplines but an inclination to step across borders in particular the one between the world of facts and the world of norms Human morality is complex and probably even messy and this clean distinction becomes blurred whenever one looks more closely at the various components that enable and influence our moral actions and ethical orientations In that way morality may indeed

be located between facts and norms and an empirically informed ethics that is less concerned with analytical purity but immerses into this moral complexity may be an important step to make the contributions of ethics to this world more valuable and relevant

**Encyclopedia of Stem Cell Research**, 2008 Provides an understanding of the basic concepts in stem cell biology and addresses the politics ethics and challenges currently facing the field From publisher description [Sin No More](#) John Dombrink, Daniel Hillyard, 2007-11 Sin No More offers a vivid examination of some of the most morally and politically disputed issues of our time abortion gay rights assisted suicide stem cell research and legalized gambling These are moral values issues all of which are hotly sometimes violently contested in America The authors cover these issues in depth looking at the nature of efforts to initiate reforms to define constituencies to mobilize resources to frame debates and to shape public opinion all in an effort to achieve social change create or re write legislation Of the issues under scrutiny only legalized gambling has managed to achieve widespread acceptance despite moral qualms from some Publisher description

**Intervening in the Brain** Reinhard Merkel, G. Boer, J. Fegert, T. Galert, D. Hartmann, B. Nuttin, S. Rosahl, 2007-07-28 The wealth of insights into the brain's functioning gained by neuroscience in recent years led to the development of new possibilities for intervening in the brain such as neurotransplantation neural prostheses and brain stimulation techniques Moreover new and safer classes of psychopharmaceutical drugs lend themselves to neuroenhancement applications i.e. they could be used to enhance cognitive capacities or emotional well being without therapeutic need This book offers extensive state of the art accounts for these novel kinds of intervention indicates future developments and discusses the relevant philosophical ethical and legal issues

**Business Ethics of Innovation** Gerd Hanekamp, 2007-05-06 Firms that operate in a market economy often depend upon innovations in order to achieve competitive advantages that sustainably secure their survival Business ethics is thus largely concerned with questions about the decisional freedoms involved in innovation processes Innovations oftentimes raise novel questions about the role of the state or the structure of society Business ethics needs to provide a framework for balancing the different perspectives values and interests at stake This balance must be achieved at the level of the firm in order to facilitate adequate long term decisions but it should also be sought at higher including regulatory levels Achieving this balance will require an ethical framework for entrepreneurial action The particular disciplines engaged in generating innovations as well as all relevant fields of applied ethics should be involved in the balancing process Business Ethics of Innovation is thus necessarily an interdisciplinary endeavour This volume assesses general questions of how business ethics can help to structure innovations and specifically discusses pharmaceutical innovations as well as innovations in the IT sector

**Nanotechnology** Harald Brune, Holger Ernst, Armin Grunwald, Werner Grünwald, Heinrich Hofmann, Harald Krug, Peter Janich, Marcel Mayor, Wolfgang Rathgeber, Günter Schmid, Ulrich Simon, Viola Vogel, Daniel Wyrwa, 2006-06-23 Since nanotechnology is considered a key for the 21st century its promises have been assessed by various scientific communities By meeting at the nanoscale various disciplines from physics via chemistry to

biology from engineering to medicine contribute synergetically to the newly created knowledge base and the resulting technological advances. Considering that large societal sectors will be impacted, the unique aspect of this two year study was to assess nanotechnology from various interrelated perspectives: scientific progress, industrial relevance, economic potential, educational needs, potential adverse health effects, and philosophical aspects. The goal of this study was to derive integrated recommendations which consider the large range of societal implications reflecting the different views in an integrative manner. The study attempts to link previously isolated statements, bundling the various concepts and giving unified recommendations to decision makers in relevant society sectors such as politics, economy, and research. Special attention was given to the European situation with respect to commercial consequences, an aspect that has not yet received the attention it deserves so far.
