Photo-electricity Arthur Llewelyn Hughes, 1914 *Neural circuits underlying emotion and motivation: Insights from
optogenetics and pharmacogenetics* Anton Ilango, Mary Kay Lobo, 2015-06-04 Application of optogenetic and
pharmacogenetic tools to study the neural circuits underlying emotional valence feeding arousal and motivated behaviors has
provided crucial insights into brain function Expression of light sensitive proteins into specific neurons and subsequent
stimulation by light optogenetics to control neuronal activity or expression of designer receptors exclusively activated by
designer drugs DREADD in specific neuronal populations with subsequent activation or suppression of neuronal activity by
an otherwise inert ligand pharmacogenetics provides control over defined elements of neural circuits These novel tools have
provided a more in depth understanding into several questions about brain function These include Regulation of sleep wake
transition by the interaction of hypocretin neurons of lateral hypothalamus and noradrenergic neurons of the locus coeruleus
Regulation of feeding by AGRP and POMC neurons in arcuate nucleus of the hypothalamus Place preference and positive
reinforcement by activation of DA neuron of VTA Place aversion by activation of VTA GABA and lateral habenula neurons
Opposing influences on reinforcement by activation of D1 and D2 expressing medium spiny neurons of dorsal striatum and
nucleus accumbens The list still grows From cell type specific manipulations to signaling properties in the cell Dietz et al
2012 with unprecedented temporal resolution these tools revolutionize the exploration of pathways connectivity Recent years
also witnessed the extension of applying these tools from studying emotional valence and motivated behavior to reactivation
of memory c fos based genetic approaches allowed us to integrate light sensitive opsins or DREADD receptor into specific
neurons that are activated by certain learning events for example fear Garner et al 2012 Liu et al 2012 In this Research Topic
we welcome researchers to contribute original research articles review articles methods and commentary on topics utilizing
optogenetic and pharmacogenetic tools to study the neural circuits underlying emotional valence motivation reinforcement
and memory We believe the Research Topic will shine light on various questions we have about brain function by using novel
optogenetic and pharmacogenetic tools and will hopefully inspire ongoing research to overcome the hurdles of using these
tools to advance clinical applications Photo-Induced Metastability in Amorphous Semiconductors Alexander V.
