Efficient Graph Rewriting and Its Implementation Heiko Dörr,1995-07-14 Atherosclerosis the most common disease in humans and also the main cause of death in the Western world only develops after an intima is formed The intima is defined as the region of the arterial wall from the endothelial surface to the luminal margin of the media This volume considers all aspects of intima formation based on results which had been obtained by studying three different models Spontaneous intima formation Experimentally induced intima formation Latrogenously induced intima formation **Efficient Graph**

Fourth South American Workshop on String Processing (WSP 1997) Ricardo Baeza-Yates, 1997-10-15 We use string processing to denote any use of computers to process and manage strings or sequences of symbols This includes text retrieval compression computational biology natural language processing word theory etc Strings can also be extended to other dimensions including images and complex objects such as trees or graphs These areas are important for many applications including text image or genetic databases Nowadays the

most important motivation for research is searching and managing the World Wide Web The Web contains terabytes of data and searching for information is becoming as difficult as finding a needle in a haystack Future versions of this work shop will focus on generic information retrieval query languages user interfaces and visualization tools **Fundamental**

Conditional and Typed Rewriting Systems Stephane Kaplan,1991-08-07 In recent years extensions of rewriting techniques that go beyond the traditional untyped algebraic rewriting framework have been investigated and developed Among these extensions conditional and typed systems are particularly important as are higher order systems graph rewriting systems etc The international CTRS Conditional and Typed Rewriting Systems workshops are intended to offer a forum for researchers on such extensions of rewriting techniques This volume presents the proceedings of the second CTRS workshop which contributed to discussion and evaluation of new directions of research The proceedings of the first CTRS workshop are in Lecture Notes in Computer Science Vol 308 Several important directions for extensions of rewriting

techniques were stressed which are reflected in the organization of the chapters in this volume Theory of conditional and Horn clause systems Infinite terms non terminating systems and termination Extension of Knuth Bendix completion Combined systems combined languages and modularity Architecture compilers and parallel computation Basic frameworks for typed and order sorted systems Extension of unification and narrowing techniques Intelligent Techniques for Planning Ioannis Vlahavas,Dimitris Vrakas,2005-01-01 The Intelligent Techniques for Planning presents a number of modern approaches to the area of automated planning These approaches combine methods from classical planning such as the construction of graphs and the use of domain independent heuristics with techniques from other areas of artificial intelligence This book discusses in detail a number of state of the art planning systems that utilize constraint satisfaction techniques in order to deal with time and resources machine learning in order to utilize experience drawn from past runs methods from knowledge systems for more expressive representation of knowledge and ideas from other areas such as Intelligent Agents Apart from the thorough analysis and implementation details each chapter of the book also provides extensive background information about its subject and presents and comments on similar approaches done in the past
