Molecular Geometry of Body Pattern in Birds Antonio Lima-de-Faria, 2012-03-19 After having read this book you will never see birds in the same way again The unexpected patterns displayed by a bird's body have been seen as bizarre events that demanded little attention or were described as amazing curiosities None of these surprising features seem to be fortuitous They appear to be an integral part of a rigid order and a coherent geometry which is directed by simple gene interactions and molecular cascades occurring at various cellular levels and at different times during the organism's development A novel geometry unfolds in front of your eyes giving the body configurations another meaning Lima de Faria is Professor Emeritus of Molecular Cytogenetics at Lund University Lund Sweden This is his sixth book dealing with the molecular organization of the chromosome and its implications for the understanding of the mechanisms responsible for biological evolution

Dynamic Energy and Mass Budgets in Biological Systems S. A. L. M. Kooijman, 2000-03-23 The Dynamic Energy Budget theory unifies the commonalities between organisms as prescribed by the implications of energetics and links different levels of biological organisation cells organisms and populations The theory presents simple mechanistic rules that describe the uptake and use of energy and nutrients and the consequences for physiological organization throughout an organism's life cycle All living organisms are covered in a single quantitative framework the predictions of which are tested against a variety of experimental results at a range of levels of organisation The theory explains many general observations such as the body size scaling relationships of certain physiological traits and provides a theoretical underpinning to the method of indirect calorimetry In each case the theory is developed in elementary mathematical terms but a more detailed discussion of the methodological aspects of mathematical modelling is also included
