Efferent Organization And The Integration Of Behavior:

Efferent Organization and The Integration of Behavior Jack Maser, 2012-12-02 Efferent Organization and the Integration of Behavior is a nine chapter text that discusses the hypotheses and alternative conceptualizations of efferent mechanisms as well as the neural basis of patterned movement The opening chapters examine several behavioral categories the neural mediation of movement and the distinction between efferent response and efferent motor processes These chapters also present a revised theory of the role of the motor system in physiological regulation and neural metabolic integration in energy production for behavior These topics are followed by considerable chapters devoted to efferent organization of specific brain sections including the motor cortex pyramidal system globus pallidus substantia nigra diencephalon hippocampus and neocortex This text also deals with the instrumental conditioning based on alimentary or food reinforcements A chapter discusses the constraints on theoretical interpretations of neuroanatomical circuitry functions of noradrenergic and cholinergic brain systems The concluding chapter describes the relationship between the motor integration systems of extrapyramidal structures and the motivational systems of limbic structures This chapter also looks into the anatomical organization of self stimulation and the microelectrode data which delineate the response of single neurons to stimulation at hypothalamic self stimulation sites

Neural Mechanisms in Behavior H.B. Barlow, R.M. Boynton, E.V. Evarts, E.R. Kandel, F. Ratliff, J.E. Rose, R.F. Thompson, 2012-12-06 This book is the product of a two day symposium held at the University of Texas Austin in March 1978 There was double motivation for our hosting a symposium on neural mechanisms in behavior The 1977 1978 academic year marked both the 50th anniversary of the Department of Psychology at Texas and the 30th anniversary of the famous Hixon Symposium organized by the longest serving member of the department LLOYD JEFFRESS PHILIP GOUGH then chairman of the department suggested that the department celebrate these two historic events and honor itself in the process by holding the first of a series of symposia on topics in experimental psychology Approval and initial funding for this enterprise came from ROBERT KING then Dean of Social and Behavioral Sciences additional funds were provided by the Program in Cognitive Science of the Sloan Foundation Proceeds from the sale of this volume will all pass into a fund to help support subsequent symposia and volumes At 50 we are clearly a young department even for a psychology department but psychology was at least nominally present from the beginning of The University of Texas in 1883 Then courses in psychology were offered in the School of Philosophy and had wonderful titles such as Mental Science Strictly Speaking In 1898 the first experimental psychology course was offered Or at least it was intended to be offered the catalog indicated that it was contingent upon the availability of necessary equipment

The Psychobiology of Consciousness Richard Davidson, 2012-12-06 CONSCIOUSNESS AND THE BRAIN SELF REGULATION PARADOX The relationship of consciousness to biology has intrigued mankind throughout recorded history However little progress has been made not only in understanding these issues but also in raising fundamental questions central to the

problem As Davidson and Davidson note in their introduction William James suggested almost a century ago in his *Principles of Psychology* that the brain was the organ of mind and behavior James went so far as to suggest that the remainder of the *Principles* was but a footnote to this central thesis This volume brings together diverse biobehavioral scientists who are addressing the various aspects of the mind/body/behavior issue Although some of the authors have previously published together in other volumes by and large the particular combination of authors and topics selected by the editors makes this volume unique and timely Unlike the *Consciousness and Self Regulation* series Schwartz Shapiro 1976 1978 also published by Plenum this volume is devoted entirely to a psychobiological approach to consciousness Although readers will differ in their interest in specific chapters the well rounded investigator who is concerned with the psychobiology of consciousness will want to become intimately acquainted with all the views presented in this volume As noted by the individual contributors the topic of this volume stimulates fundamental questions which on the surface may appear trivial yet on further reflection turn out to have deep significance

Mechanisms of Learning and Motivation A. Dickinson, R. A. Boakes, 2014-01-14 This volume consists of a series of chapters honoring a Polish psychologist and neurophysiologist who died in 1973 Although his name was familiar to all of the contributors many had had no personal contact with him and had gained acquaintance with his ideas only through his publications

Aspects of the Development of Competence W. A. Collins, 2015-12-22 Published in the year 1981 *Aspects of the Development of Competence* is a valuable contribution to the field of Developmental Psychology

Neurobiology of Aging J. Ordy, 2013-06-29 Aging is one of the most universal and inevitable social and scientific challenges confronting man The lives of all multicellular organisms begin with conception extend through phases of development maturity senescence and finally end in death Man is no exception but has the unique feature of a complex brain It plays an integrative role in adaptation to the physical and social environments through reflexes conditioning and more complex forms of learning The brain is a repository for both inherited and acquired information With the development of speech and the formation of symbolic language the human brain has made it possible to transmit information culturally horizontal to other members of society in addition to genetic vertical transmission to progeny This horizontal transmission which has reached its highest form in man is a powerful extension of genetic transmission The brain may provide man all that is of importance in life It has played a key role in the evolution of life by maintaining and extending the life span Many mental or intellectual capacities of man reach a peak in early adulthood remain relatively constant throughout maturity and then appear to decline during senescence Behaviorally there appears to be a decrease in sensory learning and motor functions with aging in all mammalian species As integrated adaptive control systems the brain and neuroendocrines have been closely associated with the homeostatic adaptation to environmental challenges throughout the life span

The Hippocampus Robert Isaacson, 2012-12-06 These books are the result of a conviction held by the editors authors and publisher that the time is appropriate for assembling in one place information about functions of the hippocampus derived

from many varied lines of research Because of the explosion of research into the anatomy physiology chemistry and behavioral aspects of the hippocampus some means of synthesis of the results from these lines of research was called for We first thought of a conference In fact officials in the National Institute of Mental Health suggested we organize such a conference on the hippocampus but after a few tentative steps in this direction interest at the federal level waned probably due to the decreases in federal support for research in the basic health sciences so keenly felt in recent years However the editors also had come to the view that conferences are mainly valuable to the participants The broad range of students of all ages of brain behavior relations do not profit from conference proceedings unless the proceedings are subsequently published Furthermore conferences dealing with the functional character of organ systems approached from many points of view are most successful after participants have become acquainted with each other's work Therefore we believe that a book is the best format for disseminating information and that its publication can be the stimulus for many future conferences

Progress in Psychobiology and Physiological Psychology James M. Sprague, Alan N. Epstein, 2013-10-22 Progress in Psychobiology and Physiological Psychology Volume 9 reviews developments in the fields of psychobiology and physiological psychology with emphasis on selected areas of research relating brain mechanisms and behavior Topics covered range from sensory perceptual systems in mammals to behavioral modulation of visual responses in monkeys Brain pathways for vocal learning in birds are also examined along with neural mechanisms in taste aversion learning Comprised of seven chapters this volume begins with an insightful account of the evolution of concepts regarding cortical organization relevant to perception in mammals Studies of single unit activity in awake behaving monkeys are then presented followed by a discussion on the neural control of song in birds In particular the brain pathways involved in vocal learning in birds are defined anatomically and physiologically including the presence of hemispheric dominance and the sensitivity to steroid hormones Subsequent chapters focus on the response characteristics of the cells in the forebrain that give stimuli their significance for associative learning the neuropsychological mechanisms of taste aversion learning and the psychobiology of thirst The final chapter is devoted to the pineal gland and its anatomical connection to the eyes together with pineal hormones polypeptides and proteins This book should appeal to biologists psychologists and physiologists

The Human Nervous System George Paxinos, Juergen K Mai, 2004-01-19 This long awaited update of the classic The Human Nervous System stands as an impressive survey of our knowledge of the brain spinal cord and peripheral nervous system The book has been completely redone and brought up to date An impressive and respected cast of international authors have contributed 37 chapters on topics ranging from Brain Evolution all phases of Brain Development to all areas of the adult brain and peripheral pathways along with careful descriptions of the spinal cord and peripheral nervous system brainstem and cerebellum The Human Nervous System Second Edition will again serve as the gold standard providing a one stop source of up to date information about our knowledge of the human nervous system This second edition of the standard

reference on the human nervous system is extensively and completely revised and updated from the 1990 first edition. Written by the leading researchers many chapters have been completely rewritten new chapters have been added. A new section on Evolution and Development provides a broader perspective and all chapters include references and perspectives to neurological disease. *Brain, Behaviour and Evolution* David A. Oakley, H. C. Plotkin, 2018-02-19. Originally published in 1979 this book provides students with an example of the ways in which an evolutionary perspective can rephrase and clarify traditional questions and issues in psychology. The format provides the student firstly with the minimal amount of basic information in neuroanatomy genetics and modern evolutionary theory in a form which is readily related to the remainder of the volume. The book then goes on to consider the relationships between different forms of explanation in biology and the role of brain behaviour students in these relationships. Finally the reader is given an opportunity to follow the reasoning which stems from a biological approach when applied to topics in human behaviour such as learning dreaming sleeping exploration anxiety reasoning intelligence and consciousness. Modern evolutionary biology places man in a broader context than does traditional psychology and this new perspective reduces our tendency to view life solely from a human standpoint. The significance as well as the uniqueness of some traditionally human attributes are challenged by this approach.

Neurophysiology and Psychophysiology G. C. Galbraith, M. L. Kietzman, E. Donchin, 2021-09-30. Originally published in 1988 in several respects this book is a tribute to the outstanding career of the late Donald B Lindsley 1907-2003 who over a span of more than 55 years had contributed greatly to the development of research in the fields of neurophysiology psychophysiology and experimental psychology. The impetus for the book was a conference held at UCLA to honor Professor Lindsley for his numerous and significant contributions to psychology. The chapters of this book have been written by Professor Lindsley's colleagues and co-workers and by former students and postdoctoral fellows. The introductory chapter written by Lindsley himself tells of 2000 years of pondering. The chapter is a discussion of the lengthy history of neurophysiology psychophysiology and behaviour. Many of the topics mentioned in this chapter are subsequently presented in the book as reports of ongoing research in the field. **Neuropsychology After Lashley** Jack Orbach, 2018-09-03. Originally published in 1982 about 50 years after the publication of Lashley's *Brain Mechanisms and Intelligence*. The aim of this book was to review Lashley's major contributions and to trace the development of physiological psychology through the experimental work of Lashley's students and colleagues and those influenced by Lashley's writings. The contributors were invited to review their own experimental work in a lecture and to indicate how Lashley's seminal contributions might have exerted an influence in shaping or directing their thinking. This volume is the result of their efforts. The Developing

Individual in a Changing World Jane Goldberg, 2017-07-12 This two volume work levels both criticism and challenge to traditional developmental psychology For too long developmental psychologists have been studying individuals as if they developed in a sociocultural vacuum As psychologists began to study the individual's development more broadly they considered the impact of a number of other factors in the physical and social environment early education sociocultural differences mass communication alternative living arrangements and medical care to name but a few Volume I Historical and Cultural Issues examines the problems of behavioral development from historical political theoretical and cultural points of view A number of content areas already familiar to developmental psychologists are discussed Piaget's theory perceptual development socialization and language acquisition In addition topics relatively unfamiliar to American psychologists are included the contribution of early European developmentalists such as William and Clara Stern Alfred Binet and Eduard Spranger and an introduction to recent Soviet developmental theory Volume II Social and Environmental Issues considers the effects of changes in social and environmental conditions upon individual development The expanding impact of technology such as the communications media the importance of nutrition and the design of playgrounds and other spaces for growing children are among the changes examined as are the impact of social organizations and interactions within small groups focusing upon preschool education interaction within the family and personality development throughout the individual's life

Humanistic Psychology Joseph Royce, 2012-12-06 THE FORMATIVE TENDENCY I have often pointed out that in my work with individuals in therapy and in my experience in encounter groups I have been led to the conviction that human nature is essentially constructive When in a therapeutic climate which can be objectively defined a person becomes sharply aware of more of his or her internal experiencing and of the stimuli and demands from the external world thus acquiring a full range of options the person tends to move in the direction of becoming a socially constructive organism But many are critical of this point of view Why should such a positive direction be observed only in humans Isn't this just pure optimism So quite hesitantly because I have to draw on the work and thinking of others rather than on my own experience I should like to try to set this directional tendency in a much broader context I shall draw on my general reading in the field of science but I should like to mention a special indebtedness to the work of Lancelot Whyte in *The Universe of Experience* Harper and Row 1974 the last book he wrote before his death Though the book has flaws in my judgment this historian has some thought provoking themes to advance I have learned from many others as well *The Nature of Thought* P. W. Jusczyk, R. M. Klein, 2014-05-22 First published in 1980 This is a collection of lectures around Professor Emeritus Don O. Hebb of Dalhousie University on the major trends in cognitive psychology It includes essays on Hebb's ideas and impact on current psychological theorizing his structure of thought and a collection under the section of Information Processing Analysis

Variability in Human Performance Thomas J. Smith, Robert A. Henning, Michael G. Wade, Thomas Fisher, 2014-08-26 Understanding the conditions under which variability in performance may arise and the processes related to its emergence gives us insight into the development of techniques for improving the quality of performance Variability in Human Performance details the scientific and the practical implications of human performance variability by providing a broad perspective on how and why such variability occurs across a number of disciplinary domains The text takes an approach that rests upon the idea of context or design specificity in performance namely that variability in performance is closely referenced to design factors in the environment in which performance is occurring An exploration of the link between variability and related processes the book introduces a comprehensive framework for understanding human performance variability presented in terms of how human control of behavior is closely tied to design factors in the performance environment The authors introduce empirical evidence as well as practical examples and application areas in support of this framework The book begins with coverage of neurobiological and biomechanical basis of movement variability then examines rich and extensive empirical evidence available for context specificity in cognitive performance and learning as a basis for cognitive performance variability The book then reviews the evidence for context specificity in Student learning Displaced feedback conditions Human error behavior Affective performance Social and team performance The authors also explore work performance as influenced by complex sociotechnical systems and as a basis for performance variability applying control systems concepts to an interpretation of the nature and basis of performance variability in all of these domains They conclude by taking an evolutionary perspective on the origins and behavioral significance of human performance variability The book then provides strategies on how individuals groups and organizations can significantly reduce variability in human performance that often leads to systems failures

Motivation Evelyn Satinoff, Philip Teitelbaum, 2013-11-11 Motivation addresses a central problem in psychology Why does an animal s behavior fluctuate in the face of an unaltered environment In a sense this is the opposite of the question from which work on motivation began and for which Claude Bernard invented the concept of the fixity of the internal milieu How does an animal maintain constancy in the face of a fluctuating environment Dealing with motivation has become extremely complex as new experiments phenomena and theories have extended the concept This book embodies some of the ways in which work on motivation is currently proceeding One of the major changes has been the recognition that motivation cannot be explained without an understanding of the biological rhythms and activational systems that underlie behavior Another is that ecological and evolutionary perspectives add enormously to answering the central problem of why an animal does what it does when it does The book suffers from several omissions There is no chapter on the development of motivated behavior There is none on reward systems in the brain owing to the untimely death of James Olds whose

contribution would have enriched this book appreciably and to whom we dedicate it EVELYN SATINOFF PHILIP
