Health from Space Research Austrian Soc Aerospace Medicine.,1992 Health from Space Research Austrian Society for Aerospace Medicine (ASM),2012-12-06 Space physiology and space medicine are fairly recent sciences born of the desire to launch man into space and bring him safely back again Weightlessness and cosmic radiation conditions which can neither be adequately simulated nor reproduced on earth are on the other hand used as research tools for medical experiments in particular in the fields of neurophysiology internal medicine as well as genetics and radiation dosimetry The newly established Austrian Society for Aerospace Medicine provides a basis for multidisciplinary approaches to spaceflight biomedical research Diagnostic prognostic and elective operational and preventive measures can be fostered by activities of the Society In October 1991 the first Austrian was launched into orbital flight and fulfilled an ambitious scientific program which was dominated by life science experiments in the areas of cardiovascular medicine fluid electrolyte research neurophysiology endocrinology genetics and radiation biology The results from these experiments presented in this book will help to improve the management of biomedical problems in daily life **Health from Space Research** Austrian Society for Aerospace Medicine,1992-01-01 *Biological and Medical Research in Space* David Moore,Peter Bie,Heinz Oser,2012-12-06 Life Science studies in space were initially driven by the need to explore how man could survive spaceflight conditions the effects of being launched under high accelerations exposed to weightlessness and radiation for different periods of time and returned to Earth in safety In order to substantiate the detailed knowledge of potentially adverse effects many model experiments were launched using organisms which ranged from bacteria plants invertebrates rodents and primates through to man Although no immediate life threatening effects were found these experiments can be considered today as the precursors to life science research in space Many unexplained effects on these life forms were attributed to the condition of weightlessness Most of them were poorly recorded poorly published or left simply with anecdotal information Only with the advent of Skylab and later Spacelab did the idea emerge and indeed the infrastructure permit weightlessness to be considered as an extended tool for research into some fundamental mechanisms or processes as associated with the effect of gravity on organisms at all levels The initial hypothesis to extrapolate from hypergravity through $1 \times g$ to near $0 \times g$ effects could no longer be retained since many of the experiment results were seen to contradict the models or theories in the current textbooks of biology and physiology The past decade has been dedicated primarily to exploratory research

National Library of Medicine Current Catalog National Library of Medicine (U.S.),1993 Outer Space in Society, Politics and Law Christian Brünner,Alexander Soucek,2012-08-30 Spaceflight is a rational undertaking yet full of emotions It is a dream of mankind and a multi billion industry likewise It is subject to a distinct branch of law and moreover part of modern pop culture In short spaceflight is fascinating Outer Space in society politics and law is an interdisciplinary approach to the understanding of modern space law Technical cultural and historical aspects lay the foundation for a sound

comprehension why space law norms have been established and what they mean in practice The reader will realize the impact space and spaceflight have on society from Stonehenge to climate change A new approach to presenting space law comprehensive and illustrative We live in a society absolutely dependent on science and technology and yet have cleverly arranged things so that almost no one understands science and technology That s a clear prescription for disaster Carl Sagan

Space of Service to Humanity G. Haskell, Michael J Rycroft, 2013-03-11 G Haskell Symposium Convenor Vice President for Academic Services and Outreach International Space University By taking Space of Service to Humanity as the theme for the inaugural event in its series of annual symposia the International Space University ISU is asserting that this application of space technology requires special attention at this time Future symposia will examine the issues of the day from different perspectives In keeping with the fundamental principles of ISU the symposium took a global perspective as distinct from national or regional perspectives and treated both technical and non technical topics Oral and poster presentations were delivered in the scientific engineering economic legal political and philosophical domains All oral papers were delivered in plenary session to encourage cross fertilization between specialities and posters were readily available for viewing throughout the three day event As an international and interdisciplinary forum for the sharing of experience and for discussion and debate the symposium proved to be a stimulating and worthwhile event for the 135 participants from 25 countries and 5 international organizations with backgrounds in industry government and academia

More than four decades have passed since a human first set foot on the Moon Great strides have been made in our understanding of what is required to support an enduring human presence in space as evidenced by progressively more advanced orbiting human outposts culminating in the current International Space Station ISS However of the more than 500 humans who have so far ventured into space most have gone only as far as near Earth orbit and none have traveled beyond the orbit of the Moon Achieving humans further progress into the solar system had proved far more difficult than imagined in the heady days of the Apollo missions but the potential rewards remain substantial During its more than 50 year history NASA s success in human space exploration has depended on the agency s ability to effectively address a wide range of biomedical engineering physical science and related obstacles an achievement made possible by NASA s strong and productive commitments to life and physical sciences research for human space exploration and by its use of human space exploration infrastructures for scientific discovery The Committee for the Decadal Survey of Biological and Physical Sciences acknowledges the many achievements of NASA which are all the more remarkable given budgetary challenges and changing directions within the agency In the past decade however a consequence of those challenges has been a life and physical sciences research program that was dramatically reduced in both scale and scope with the result that the agency is poorly positioned to take full advantage of the scientific opportunities offered by the now fully equipped and staffed ISS laboratory or to effectively pursue the scientific research needed to support the development of advanced human exploration capabilities Although its review has left it deeply concerned about the current state of NASA s life and physical sciences research the Committee for the Decadal Survey on Biological and Physical Sciences in Space is nevertheless convinced that a focused science and engineering program can achieve successes that will bring the space community the U S public and policymakers to an understanding that we are ready for the next significant phase of human space exploration The goal of this report is to lay out steps and develop a forward looking portfolio of research that will provide the basis for recapturing the excitement and

value of human spaceflight thereby enabling the U S space program to deliver on new exploration initiatives that serve the nation excite the public and place the United States again at the forefront of space exploration for the global good
