**Health Impact Assessment** John Kemm, Jayne Parry, Stephen Palmer, 2004-04-01 Health effects are often overlooked when planning development projects ranging from new runways at major airport sites to developing water supply systems to improve sanitation Health Impact Assessment HIA is the assessment of the health effects positive or negative of a project programme or policy It is therefore concerned with the health of populations and attempts to predict the future consequences for health of decisions which have not yet been implemented HIA is a new and growing field with numerous schools of thought and areas of controversy This book is the first to give a comprehensive overview of the concepts theory techniques and applications of HIA to aid all those preparing projects or carrying out assessments It draws on examples and thinking from many different disciplines and many parts of the world It identifies the areas of agreement and the questions remaining unanswered It maps a confused field and signposts possible directions for future progress HIA is intended to help decision makers in all areas foresee the consequences of their decisions to ensure the consequences are considered and reduce the risk of population health being damaged through some indirect and unintended consequence of a decision This book is a practical handbook for those preparing the assessments be they epidemiologists environmentalists health economists or public health specialists as well as serving as a conceptual guide for policy makers decision makers and planners at national and international level This book will serve both as a reference for the established HIA practitioner and as an introduction for the novice

**Health Impact Assessment** J. R. Kemm, Jayne Parry, Stephen R. Palmer, 2004 Providing a comprehensive overview of the concepts theory techniques and applications of Health Impact Assessment to aid all those preparing projects or carrying out assessments this book draws on examples and thinking from many different disciplines and many parts of the world

Health Impact Assessment Martin Birley, 2013-10-18 Health Impact Assessment HIA is primarily concerned with the future consequences of plans proposals and policies on the health of communities It is a rapidly growing complement to Environmental Impact Assessment increasingly mandated by national and international requirements Guidelines have been produced by many national and international organizations and it is being introduced in a number of undergraduate or postgraduate university curricula However there has been until now no broad based introductory text of international scope to the subject suitable for both these courses and for professional training The purpose of this book is to fill this gap and to introduce the subject of Health Impact Assessment using plain language in both general and specific contexts and with reference to both market and less developed economies As a result the reader should be able to describe what HIA can and cannot achieve identify the components of a successful HIA and participate in an assessment as a member of a team Examples are provided from a number of planning and development sectors including extractive industry water resource management and housing The reader whether student or professional need not be a health specialist although prior knowledge of some public or environmental health would be an advantage

**Health Impact Assessment for Sustainable Water Management** Lorna Fewtrell, David Kay, M. Benjamin, 2008-07-15

Health Impact Assessment for Sustainable Water Management is a pioneering international text exploring and developing this emerging discipline. It is the first to take an international perspective seeking to draw generic lessons from both the developed and developing nations' experience in this new area of activity. The approach is being applied in policy development to strengthen the evidence base and across a wide spectrum of resource developments: industrial and urban infrastructure projects and in aid projects in developing countries. This book illustrates the importance of considering health in water management developments and demonstrates the role of health impact assessment (HIA) in this process. Case studies illustrate a range of management approaches to different system implementation issues and scale factors ranging from domestic rainwater harvesting for the supply of non-potable water to a large scale hydroelectric project. The concept, objectives, terminology and challenges of HIA are introduced and illustrated by case studies including rainwater harvesting, greywater reuse, sustainable drainage and evaluations of the health impacts of flooding. Developing country case studies include a small scale irrigation project in Zimbabwe, a large hydro electric scheme in Lao People's Democratic Republic and the implementation issues surrounding the use of domestic wastewater as a resource in demand by agricultural enterprises in Pakistan. The case studies illustrate different HIA approaches including the use of quantitative and qualitative information and provide benchmarks of current practice for practitioners seeking to apply HIA in the emerging agendas in both developed and developing nations. The critical appraisals within each chapter offer both best practice exemplars as well as explanations of problems and mistakes of past project implementation and define the requirements for the policy communities who will be increasingly required to accommodate HIA information in resource allocation decisions. As a result, this book will be of interest to planners, developers, policy makers, public health, environmental and water utility scientists and practitioners.
