*Long Lives Are for the Rich* Jan Baars, 2023-07-26 Long Lives Are for the Rich is the title of a silent ominous program that affects the lives of millions of people In all developed countries disadvantaged and especially poor people die much earlier than the most advantaged During these shorter lives they suffer ten to twenty years longer from disabilities or chronic disease This does not happen accidentally health inequalities including those between healthy and unhealthy life styles are mainly caused by social inequalities that are reproduced over the life course This crucial function of the life course has become painfully visible during its neoliberal reorganization since the early 1980s Studies about aging over the life course from birth to death show the inhumane consequences as people get older In spite of the enormous wealth

that has been piled up in the US for a dwindling percentage of the population there has been growing public indifference about the needs of those in jobs with low pay and high stress but also about citizens from a broad middle class who can hardly afford high quality education or healthcare However this ominous program affects all recent mortality rates show that all Americans including the rich are unhealthier and dying earlier than citizens of other developed countries Moreover the underlying social inequalities are tearing the population apart with nasty consequences for all citizens including the rich Although the public awareness of the consequences has been growing neoliberal policies remain tempting for the economic and political elites of the developed world because of the enormous wealth that is flowing to the top All this poses urgent questions of social justice Unfortunately the predominant studies of social justice along the life course help to reproduce these inequalities by neglecting them This book analyzes the main dynamics of social inequality over the life course and proposes a theory of social justice that sketches a way forward for a country that is willing to invest in its greatest resource the creative potential of its population

**Treating AIDS** Thurka Sangaramoorthy, 2014-03-26 There is an inherently powerful and complex paradox underlying HIV AIDS prevention between the focus on collective advocacy mobilized to combat global HIV AIDS and the staggeringly disproportionate rates of HIV AIDS in many places In *Treating AIDS* Thurka Sangaramoorthy examines the everyday practices of HIV AIDS prevention in the United States from the perspective of AIDS experts and Haitian immigrants in South Florida Although there is worldwide emphasis on the universality of HIV AIDS as a social political economic and biomedical problem developments in HIV AIDS prevention are rooted in and focused exclusively on disparities in HIV AIDS morbidity and mortality framed through the rubric of race ethnicity and nationality Everyone is at equal risk for contracting HIV AIDS Sangaramoorthy notes but the ways in which people experience and manage that risk and the disease itself is highly dependent on race ethnic identity sexuality gender immigration status and other notions of difference Sangaramoorthy documents in detail the work of AIDS prevention programs and their effect on the health and well being of Haitians a transnational community long plagued by the stigma of being stereotyped in public discourse as disease carriers By tracing the ways in which public knowledge of AIDS prevention science circulates from sites of surveillance and regulation to various clinics and hospitals to the social worlds embraced by this immigrant community she ultimately demonstrates the ways in which AIDS prevention programs help to reinforce categories of individual and collective difference and how they continue to sustain the persistent and pernicious idea of race and ethnicity as risk factors for the disease
