## What is the connection?

High blood sugar can cause damage to the walls of blood vessels

This damage can increase the build-up of fatty material

*The Heart in Diabetes* J.C. Chatham, C. Forder, John H McNeill, 1996-04-01      **Hormones and the Heart in Health and Disease** Leonard Share, 1999-06-01 The maintenance of arterial blood pressure and the distribution of blood flow to the various organs of the body depends on the control of the pumping action of the heart and of the resistance of the vascular beds in the individual organs in accordance with their metabolic needs These controls are achieved through the integrated actions of circulating hormones humoral factors that are synthesized and released in the heart and blood vessels and the autonomic nervous system The heart however is not only the target for the direct and indirect actions of a number of hormones and humoral factors it is also an endocrine organ in the traditional sense synthesizing and secreting into the circulation chemical factors that act at distant sites In this treatise *Hormones and the Heart in Health and Disease* we interpret endocrinology broadly and consider traditional hormones as well as autocoids that are secreted by the heart or that act on it In this overview the relevant chapters are indicated in parentheses The discovery of atrial natriuretic peptide ANP atrial natriuretic factor ANF in the 1980s indicated that the heart does indeed function as an endocrine organ in the classic sense ANP Chapter I is synthesized in the heart and secreted into the circulation for actions on the kidney where it is a potent natriuretic agent and on the vasculature where it causes vasodilation ANP can also affect myocardial contractility

**Frontiers in Cardiovascular Health** Naranjan S. Dhalla, Arun Chockalingam, H. Ivan Berkowitz, Pawan K. Singal, 2012-12-06 The Frontiers in Cardiovascular Health varies between and within nations depending upon the level at which the battle is fought for better cardiovascular health According to the 1997 World Health Report 15 million deaths i.e. 30% of the total number of deaths were attributable to cardiovascular diseases and this number is on the rise The projection for the year 2020 is quite alarming with an expected cardiovascular mortality reaching 50 million Much of this burden is projected to occur in developing countries more specifically in the most populous countries of the world namely China and India These countries are already burdened with infectious and parasitic diseases and are trying to eradicate such diseases With increasing life expectancies people all over the world especially in developing countries are exposed to degenerative atherosclerosis resulting in increased cardiovascular mortality and morbidity In developing countries resources available for health care are very limited For example many of the African countries spend less than 10 per person per year on his/her entire health care let alone cardiovascular health The average health care budget for nearly two thirds of the global population is well below 100 per year on a per capita basis Therefore in developing countries health promotion and primary prevention are the frontiers by necessity Improving awareness and health education is not only a matter of choice but is an absolute necessity

**Translational Cardiology** Cam Patterson, Monte S. Willis, 2012-07-04 Translational Cardiology Molecular Basis of Cardiac Metabolism Cardiac Remodeling Translational Therapies and Imaging Techniques provides an up to date introduction to the role circadian rhythms cardiac

plasticity and mechanotransduction play in the heart while at the same time introducing new developments in cellular viral and non biologic therapies that are in the process of being developed. Importantly the focus of this book is on topics that due to their novelty are largely not covered in the other major textbooks. A special emphasis is placed on the molecular basis of cardiac metabolism, new concepts in cardiac remodeling and translational therapies and imaging techniques currently under development for clinical use. The chapters are written by experts from diverse clinical and biomedical research backgrounds. Translational Cardiology: Molecular Basis of Cardiac Metabolism, Cardiac Remodeling, Translational Therapies and Imaging Techniques simplifies the complexity of the molecular basis of disease by focusing on patient oriented disease mechanisms and therapies and is of great value to a broad audience including physicians e.g. cardiologists, cardiovascular surgeons, pathologists as well as translational biomedical researchers in a wide range of disciplines.
