Spruell, 2011-06-10 The union of covalent and noncovalent chemistries manifested in the mechanical bond represents one of the great chemical triumphs of the last half century However until recently the preparation of mechanically interlocked compounds has often been an inefficient and limiting process This thesis provides a detailed account of the great strides taken to increase the synthetic accessibility of donor acceptor mechanically interlocked molecules by the application of highly efficient and ultra mild chemical transformations during their template directed synthesis These new departures in synthesis have indeed played a transformative role in that more complex higher order and functional architectures once only a dream are now comfortably within reach Specifically the formation of mechanical bonds in higher order rotaxanes and catenanes has become ever easier through the use of highly efficient click chemistries The resulting mechanically interlocked compounds are functional molecular media for a host of applications including information storage mechanical actuation and drug release Modern Cyclophane Chemistry Rolf Gleiter, Henning Hopf, 2006-03-06 Here the editors Rolf Gleiter and Henning Hopf present an excellent overview of all the important aspects and latest results in cyclophane chemistry Clearly structured and covering the entire range the book introduces readers to the most recent research in the field Twenty chapters written by well known scientists cover in

particular synthesis of carbo and heterocyclic cyclophanes and metallocenophanes structural and spectroscopic properties of cyclophanes current and future applications in synthesis and material science novel reactions of cyclophanes use of cyclophanes as building blocks in supramolecular chemistry for this fascinating class of compounds Thus this is not only an extremely valuable source of information for synthetic organic chemists but also a ready reference for scientists working in related fields of arene chemistry stereoselective synthesis material science and bioorganic chemistry 1996-2000 Ingmar Grenthe, 2003 A collection of the Nobel Lectures delivered by the prizewinners in chemistry together with Heath Chemistry CHRISTINE H.
