Health Telematics for Clinical Guidelines and Protocols Colin Gordon, J. P. Christensen, 1995 Guidelines for clinical practice sometimes also termed practice policies receive increasing attention from clinicians and health services as means for applying best current knowledge to maximise the quality and efficiency of delivered care Earlier studies confirm the growing and widespread importance of this trend within medicine and the widely recognised potential for healthcare telematics as a means to enable the use of clinical guidelines to deliver fullest benefits to patients This book explores the scope and needs for further work in this area Listed by Biological Abstracts RRM BIOSIS volume 47 issue 4 April 1994 the papers presented are wide ranging such that anyone with an interest in any aspect of guideline development or application is likely to find something worthwhile It is therefore a book to dip into according to the reader's interest Even clinicians with little knowledge of telematics will find several chapters on the principles of clinical guidelines and protocols of interest while those from the field of telematics will find plenty of material regarding the complexities of representation of clinical knowledge L Boydell S E Belfast Health and Social Services Trust Belfast UK Journal of Telemedicine and Telecare volume 2 no 1 1996 p 61 62

Bone Research in Biomechanics G. Lowet, 1997 This book focuses on the structure of bone and its consequences for the mechanical behaviour of the bone structure The first part of this book focuses on the development of models to predict the adaptation of bone due to changes on the mechanical loading situation such as provoked by an implant But far more important than the computer power presently available the incorporation of knowledge on the biological processes have led to new kinds of models Next to the development of models itself the issue of model validation though comparison with clinical data is a main issue addressed in the papers of this symposium The second part dealing with the relationship between bone architecture and competence of bone focuses on the morphology of trabecular bone structure This work is mainly carried out in the context of research on osteoporosis and look for the relation between bone structure and fracture risk The last part is devoted to ultrasound research in bone biomechanics Several methods have been described for the in vitro and in vivo measurement of ultrasound velocity and attenuation both on cortical and on trabecular bone The reader will not only discover the state of the art when reading though this book This book can give a taste of the fascinating perspectives the research in bone biomechanics still have to offer even after more than 100 years

techniques currently employed for the computer analysis of these signals with a particular attention to the most innovative approaches based on the non linear analysis including applications of the chaos theory fractal analysis I f modelling and the time variant estimation of BP and HR characteristics The biological interpretation of the results obtained by these computerized procedures and the applicability of these techniques in a clinical setting are fully addressed in the second part of the book

Telenurse R. A. Mortensen, 1997 This book is dedicated to the promotion of the International Classification Nursing practice ICNP in Europe and to demonstrate how comparative tele matic based nursing data can be used in nursing modules of the electronic patient records Using ICNP as structured data entry will counter the lack of uniform comparative descriptive data on nursing care and enhance the clinical nursing research potential of electronic patient records It is the aim of TELENURSE not only to advance nursing documentation from the stage of paper and pen to the stage of modern telematic but also to advance electronic nursing documentation from isolated systems to integrated nursing modules of the electronic patient records Integrations spanning from data integration to integration of nursing modules with an overall architecture of electronic patient records require on the one hand different competencies and skills On the other hand integration can only be accomplished between equal partners The marriage of nursing knowledge to telematic knowledge within TELENURSE is believed to result in new generations of comprehensive and integrated telematic applications which will be of benefit to the whole health care sector This book will update you on the insights with respect to the electronic applicability of the ICNP in a European Health Environment
