Hypertension and Heart Failure Maria Dorobantu, Victor Voicu, Guido Grassi, Enrico Agabiti-Rosei, Giuseppe Mancia, 2024-03-04 The second edition of this well received book will offer both new insights into the intimate mechanisms of transition from hypertension to heart failure and clinical practice advice on the prevention and treatment of heart failure in hypertensive population Heart failure is the result of the hypertension s effects on the heart and it is a growing public health problem as it affects 20 50% of the adult population in developed countries In this context the international scientific community is continuously struggling to develop better strategies in screening diagnosing and treating hypertension and its deleterious effects Thus this field is continuously changing with new important information being added constantly A part of the book dedicated to diagnostics comprising a chapter on new perspectives on multimodality imaging and a special chapter on diastolic dysfunction The arrhythmic complications of hypertensive heart disease are discussed in two chapters on atrial fibrillation and ventricular arrhythmias respectively Readers will also find new chapters regarding hypertension and heart failure in special populations such as cancer patients young patients pregnancy and patients with a history of SARS CoV2 infection This book is a useful tool for clinicians but also to the research community interested in heart failure and

consequences of hypertension on heart who want to be up to date with the new developments in the field **The Oxford Medicine: Diseases of bronchi, lungs, mediastinum, heart, arteries, and blood** Henry Asbury Christian,1920

Renin Angiotensin System and the Heart Walmor C. De Mello,2005-10-31 Recent studies have shown that the heart possesses an intrinsic renin angiotensin system that is controlled by tissue specific parameters that are activated by biomechanical stress This book reviews the latest information on the way in which both the plasma and cardiac renin

angiotensin systems affect heart function It covers the cell and molecular biology of these systems with contributions on renin synthesis uptake and the intracellular signalling pathways Particular insight comes from transgenic mouse models in which either mouse or human genes for various components of the renin angiotensin system are expressed Other topics covered include wound healing as well as the trophic effects of aldosterone Contains the most recent findings on the renin angiotensin system and the heart Written by an international team of distinguished scientists Covers both the cellular and molecular basis of the renin angiotensin system and the clinical relevance of this research A Woman's Heart ,

systolic office and home BP measurements were positively associated with dysglycemia. Participants with dysglycemia vs normoglycemia more often had MH. The findings were in line with previous research and strengthened the association between dysglycemia and MH. In Study II we examined the associations between MH and markers of CVD in 4122 individuals without BP lowering treatment. Of participants 4.2% had MH and these were more often men and had higher BMI than those with normotension. Participants with MH also had higher odds for CACS 100 and an association which has previously been suggested as a trend. In Study III we examined the relation between soluble P-selectin as a measure of thrombotic activity, plasma high sensitivity C-reactive protein (hsCRP) as a measure of inflammation and home BP in 4548 participants. Both markers were higher in each hypertension phenotype compared with sustained normotension. The quartile of participants with the highest sP-selectin values had higher odds for CACS 100 and carotid artery plaques. The association between sP-selectin and sustained hypertension was novel and not affected by adjustments for hsCRP. In Study IV 28 healthy participants aged 18-30 years old were evaluated for the effects of a daily intake of licorice containing 100 mg of GA compared with a control product for 2 weeks. During the licorice intake period the systolic home BP increased with 3.1 mmHg and the suppression of serum aldosterone and plasma renin levels indicated that this was due to the licorice intake. In conclusion this thesis further strengthens the idea that both home and office BP measurements have values beyond that of the other and that home BP may be most valuable in individuals with dysglycemia and obesity and in men. Finally licorice may be more potent than previously known suggesting the need for increased awareness.

Förhållande mellan blodtryck och hypertoni

Hypertoni är en av de vanligaste sjukdomarna i världen och är en av de största riskfaktorerna för hjärt-kärlsjukdom. Hypertoni har identifierats som en av de viktigaste riskfaktorerna för hjärt-kärlsjukdom och förhållande mellan blodsocker och hypertoni har varit ett viktigt forskningsområde. Hypertoni och förhållande mellan blodsocker samexisterar ofta med hypertoni. Lakritsintag har visat sig ha en positiv effekt på blodtrycket och dess beståndsdel glycyrrhizinsyra (GA) har visat sig ha en positiv effekt på blodtrycket. Den europeiska unionen och Världshälsoorganisationen har beslutat att ett intag av upp till 100 mg per dag sannolikt är säkert för de flesta individer. Den gränsvärden för blodtryck som mätts på mottagningen av medicinskt utbildad personal har hemblodtryck. Flera faktorer inkluderar starkare koppling till framtida hjärt-kärlsjukdom. Genom att kombinera mottagnings och hemblodtryck ger det att diagnostisera maskerad hypertoni. MH och hemblodtrycket förhållande trots normalt mottagningsblodtryck och vitrockhypertoni. WCH och mottagningsblodtrycket men inte hemblodtrycket förhållande. Syftet med denna avhandling var att vidare utforska hemblodtryck i relation till förhållande mellan blodsocker och hjärt-kärlsjukdom och lakritsintag. Avhandlingens fyra arbeten baseras på två studier. I de första tre arbetena analyserades data från Linköpingens kohorten i the Swedish CardioPulmonary bioImage Study (SCAPIS), en prospektiv studie av män och kvinnor i åldern 50-64 år. I det sista arbetet analyserades data från en lottad verkställighetsstudie. Data i studierna bestod av enkätsvar, blodprover samt mottagnings och hemblodtrycksmätningar. I studie I och III ingick venpuls och gshastighet, kalkhalt i kranskärl vid skiktning, CACS och plackförkomst i halspulsdröarna vid ultraljudsundersökning som markörer för
