Genesis, Structure, and Meaning in Gary Snyder's Mountains and Rivers Without End Anthony Hunt, 2016-12-20 When Gary Snyder's long poem *Mountains and Rivers Without End* was published in 1996 it was hailed as a masterpiece of American poetry. Anthony Hunt offers a detailed historical and explicative analysis of this complex work using among his many sources Snyder's personal papers, letters, and interviews. Hunt traces the work's origins as well as some of the sources of its themes and structure, including N drama, East Asian landscape painting, the rhythms of storytelling, chant, and song; Jungian archetypal psychology; world mythology; Buddhist philosophy; and ritual. Native American traditions and planetary geology, hydrology, and ecology. His analysis addresses the poem not merely by its content but through the structure of individual lines and the arrangement of the parts, examining the personal and cultural influences on Snyder's work. Hunt's benchmark study will be rewarding reading for anyone who enjoys the contemplation of Snyder's artistry and ideas and more generally for those who are intrigued by the cultural and intellectual workings of artistic composition.

The Ouroboros Equation: A Fractal Apocalypse Rachel Blake, 2024-11-14 Reality is fracturing. Dr. Anya Sharma, a brilliant cryptographer, has unlocked a hidden order within prime numbers: the Ouroboros Equation, a self-replicating fractal pattern mirroring the universe's expansion. But Anya's triumph turns to terror as the equation inverts, and reality itself begins to unravel. A shimmering sphere of non-Euclidean space appears above CERN. The Mandela Effect spreads like wildfire, eroding shared memories and rewriting history. Birds flock in impossible formations; gravity pulses erratically; and cityscapes twist into Escher-like labyrinths. The world is descending into a fractal apocalypse. Anya, a woman of unwavering logic, must navigate a world where logic no longer holds. She assembles a team as unconventional as the reality they face: Cyrus, a quantum physicist haunted by simulated realities; Esmeralda, a performance artist whose work finds chilling resonance in the chaotic transformations; and Elias, a historian who unearths ancient prophecies mirroring their current crisis. Together, they race against the collapsing world, their investigation leading them from MIT labs to the hushed archives of the Vatican Library. They're not just fighting a physical threat; they're battling an epistemological meltdown where truth itself is mutable. Their only hope lies in the Atacama Desert, with a reclusive astronomer who has discovered a way to whisper into the heart of the fractal storm. Combining cutting-edge science, ancient rituals, and Esmeralda's breathtaking art installations, they attempt a high-stakes performance: a symphony of science and art to harmonize with the very equation that threatens to consume them. But can they rewrite reality before it rewrites them? Can they transform the Ouroboros Equation from an agent of destruction into a catalyst for rebirth?
