Geriatric Medicine:

Geriatric Medicine C.K. Cassel, J.R. Walsh, 2012-12-06 With the appearance of a textbook as comprehensive as this one it is clear that the field of geriatrics is coming of age The broad scope of these volumes shapes a substantial answer to the question What is geriatrics and why should we be interested in it As I see it there are at least five reasons First the scientific or intellectual reason gerontology is the study of aging from the biologic psychological and social perspectives There is increasing interest in the fascinating insights into the biologic mechanisms of aging errors in protein synthesis DNA repair mechanisms alterations of the neuroendocrine system changes in the immune system genetic controls and somatic mutations Second the demographic reason this is the century of old age There has been a 26 year gain in the average life expectancy This gain compares with that acquired from 3 000 years B C the Bronze Age to the year 1900 which was about 29 years Therefore in one century there has been a gain in the average life expectancy almost equal to 5 000 previous years of human history In 1830 one of three newborn infants survived beyond 60 years of age Principles and Practice of Geriatric Medicine M.S. John Pathy, Alan J. Sinclair, John E. Geriatric Medicine Michael R. Wasserman, Debra Bakerjian, Sunny Linnebur, Sharon Brangman, Matteo Cesari, Sonja Rosen, 2024-02-19

Both volumes sold as a combined set for a one time purchase Older adults represent the most rapidly growing demographic in the U S and in many developed countries around the world The field of geriatric medicine is still relatively young and is only recently seeing a significant increase in peer reviewed literature Medicare and Medicaid expenditures related to older adults are nearly a trillion dollars year in the US How our healthcare system cares for older adults and how those older adults navigate an increasingly complex system is of the utmost importance According to the Institute of Medicine physicians and other healthcare professionals receive an inadequate amount of training in geriatric medicine Geriatric medicine is based on the concept of delivering person centered care with a focus on function and quality of life It is essential that physicians nurse practitioners physician assistants pharmacists social workers and other health care professionals all be knowledgeable about the geriatric approach to care Geriatric medicine varies from most other fields in medicine While many specialties function on the basis of evidence based literature geriatricians and other clinicians caring for older adults must integrate relatively limited evidence with variable physiological changes and complex psychosocial determinants Geriatricians are used to caring for 90 year olds with multiple chronic illnesses Their variable physiology leads to uncertain responses to pharmacotherapy and their personal goals and wishes need to be incorporated into any plan of care Practicing geriatric medicine requires the ability to see patterns But it goes one step further as the rules are constantly in flux Every patient is an individual with particular needs and goals In order to provide true person centered care to older adults one has to incorporate these factors into the decision making process The proposed handbook is designed to present a comprehensive and state of the art update that incorporates existing literature with clinical experience Basic science and the physiology of aging create a background but are not the main focus This is because every chapter has been written through the lens of person centered care This book is about focusing on what matters to the person and how that is not always about pathology and physiology The reader generally will not find simple solutions to symptoms diseases and syndromes In fact the key to caring for geriatric patients is the ability to think both critically and divergently at the same time Geriatrics encompasses multiple disciplines and spans all of the subspecialties It requires knowledge of working within an interdisciplinary team It requires an appreciation of how quality of life varies with each individual and creates treatment and care plans that also vary And most of all it requires a firm commitment to first learning who the person is so that all of the necessary data can be

analyzed and integrated into a true person centered plan of care This book aims to serve as an unparalleled resource for meeting these challenges Updated and revised from the previous edition this text features over 40 new peer reviewed chapters new references and a wide array of useful new tools that are updated on a regular basis by interdisciplinary and interprofessional experts in geriatric medicine *Brocklehurst's Textbook of Geriatric Medicine and Gerontology E-Book* Howard M. Fillit, Kenneth Rockwood, Kenneth Woodhouse, 2010-05-10 Popular with generations of practitioners Brocklehurst's Textbook of Geriatric Medicine and Gerontology has been the definitive reference of choice in the field of geriatric care The new 7th Edition by Howard M Fillit MD Kenneth Rockwood MD and Kenneth Woodhouse carries on this tradition with an increased clinical focus and updated coverage to help you meet the unique challenges posed by this growing patient population Consistent discussions of clinical manifestations diagnosis prevention treatment and more make reference quick and easy while over 255 illustrations compliment the text to help you find what you need on a given condition Examples of the latest imaging studies depict the effects of aging on the brain and new algorithms further streamline decision making Emphasizes the clinical relevance of the latest scientific findings to help you easily apply the material to everyday practice Features consistent discussions of clinical manifestations diagnosis prevention treatment and more that make reference quick and easy Includes over 255 illustrations including algorithms photographs and tables that compliment the text to help you find what you need on a given condition Provides summary boxes at the end of each chapter that highlight important points Features the work of an expert author team now led by Dr Howard M Fillit who provides an American perspective to complement the book's traditional wealth of British expertise Includes an expanded use of algorithms to streamline decision making Presents more color images in the section on aging skin offering a real life perspective of conditions for enhanced diagnostic accuracy Includes examples of the latest imaging studies to help you detect and classify changes to the brain during aging Offers Grade A evidence based references keyed to the relevant text **Medicare Matters** Christine Cassel, 2007-03-29 One of the great leaders of our time in American medicine tackles one of the great health care issues of our generation the design fate and principles of Medicare as a system Care for our aging population and coverage through Medicare provide key testing grounds for our nation's moral and technical capacity to extend health and relieve suffering Dr Cassel is unique in her ability to bridge the worlds of clinical science health care policy and social ethics as she helps us think through how best to meet that test This book is a welcome guide and a clear charter for a nation that cares or ought to care deeply about addressing the needs of its aging population Donald M Berwick MD MPP President and CEO Institute for Healthcare Improvement **Geriatric Medicine** Christine K. Cassel, John R. Walsh, 1984 Classic Papers in Geriatric Medicine with Current Commentaries Robert J. Pignolo, Monica Crane, Mary Ann Forciea, 2010-04-28 The field of geriatrics foundations is rooted in the classic papers of early descriptions of aging and age related diseases In Classic Papers in Geriatric Medicine with Current Commentaries the authors chose the classic papers providing a combination of expert

opinion and objective assessment The 15 areas in this volume represent the beginnings of practice and thoughts about the best ways to care for older patients Each paper is introduced by a commentary describing the singular contributions of the chosen paper with a short list of other important early papers in that area and in many cases reflect on progress in that particular field The commentaries are personal statements by the authors about the influence of the papers chosen not meant to be exhaustive reviews of the clinical area in question Classic Papers in Geriatric Medicine with Current Commentaries exemplifies the importance of a paper and its ability to retain its impact over time While many of the classic papers in this collection have stood the test of time others have gained classic status by virtue of their profound influence in relatively quick measure or because of timeliness in filling a void in knowledge **Geriatric Secrets** Mary Ann Forciea, Risa

Treatment for depression and evaluating response Post traumatic stress in older adults Sleep disorders Substance Abuse Suicide and Mental Health Services for Older Adults **Geriatric Home-Based Medical Care** Jessica L. Colburn, Bruce Leff, Mariah L. Robertson, Mattan Schuchman, 2024-11-25 Older adults are living longer with more chronic disease and functional impairment than at any other time in history Office based practice is inadequate to meet the needs of patients who have difficulty leaving their homes for routine or urgent visits and health care clinicians must choose between trying to manage their problems via telehealth or sending them to the emergency room via ambulance Indeed many clinicians receive little or no training in home based medical care and are unable to consider a home visit that might avert a health crisis or an emergency room visit Other clinicians know that house calls are possible but may not know how to work them into day to day practice In recent years a growing number of clinicians have focused their practice on home based medical care to meet the rising need In fact there has been a substantial increase in house calls provided to Medicare beneficiaries In 2023 over 750 000 traditional Medicare beneficiaries and in 2022 over 680 000 Medicare Advantage beneficiaries received longitudinal home based medical care While the number of house calls has increased rapidly the number of clinicians providing those visits has markedly decreased suggesting that clinicians who are providing such care are making it the sole focus of their practice This book is intended to be a practical reference for any clinician who has struggled to care for an older adult who has difficulty getting to the office By describing fundamental principles of geriatric house call medicine and application to specific diseases and conditions we hope to provide clinicians with the tools they need to provide timely compassionate and high quality care for their older adult patients The second edition has been updated to reflect changes in the healthcare system and approaches to care since the publication of the first edition *Geriatric Practice* Audrey Chun, 2019-10-29 This book serves as a comprehensive reference for the basic principles of caring for older adults directly corresponding to the key competencies for medical student and residents These competencies are covered in 10 sections each with chapters that target the skills and knowledge necessary for achieving competency Each of the 45 chapters follow a consistent format for ease of use beginning with an introduction to the associated competency and concluding with the most salient points for mastery Chapters also includes brief cases to provide context to the clinical reasoning behind the competency strengthening the core understanding necessary to physicians of the future Written by expert educators and clinicians in geriatric medicine *Geriatric Practice* is key resource for students in geriatric medicine family and internal medicine specialties hospice and nursing home training and all clinicians studying to work with aging patients *Fundamentals of Geriatric Medicine* Rodney M. Coe, Isadore Rossman, 1983 *Handbook of Geriatrics* Steven R. Gamber, 2013-06-29 As our population continues to age health professionals are being called on to care for an ever increasing number of elderly patients A thorough understanding of what constitutes normal aging versus age prevalent illness is essential In addition the atypical and nonspecific presentation of illness commonly encountered when caring for an older patient must be expected and watched for carefully

In recent years the health professional has been exposed to an exponentially increasing number of publications attempting to teach geriatric principles To date few publications lend themselves to use by the busy practitioner student or nurse in search of immediate facts flow sheets and clinically applicable data It was felt that the health professional would benefit greatly from a book based on the concept of a ready reference hand book with chapters filled with tables flow sheets and listings similar in scope to those in a well presented lecture series Our goal was to create a geriatrics handbook that would have value at the bedside as well as in the classroom It is to this end that the contributors dedicated their efforts
