Geriatric Neuropsychology An Assessment Guide:

An Assessment Guide To Geriatric Neuropsychology Holly Tuokko, Thomas Hadjistavropoulos, 2014-04-04 At least half of all neuropsychological assessments are performed on elderly persons but the information clinicians need to make appropriate judgment calls is widely scattered Several books offering general descriptions of the cognitive functioning of the aged or of neuropsychological conditions affecting them are helpful to practitioners but do not provide reliable and valid normative information Two books that do provide this information do not focus on geriatric populations A concise yet comprehensive summary of what we now know about those over 65 with an extensive bibliography An Assessment Guide to Geriatric Neuropsychology fills the gap The neuropsychological assessment of elderly persons involves not only the performance based measurement of various capacities but heavy reliance on reports from caregivers both formal and informal about the day to day functioning of the affected person It also raises important yet often neglected ethical concerns The authors discuss all the measures that detect and discriminate among cognitive disorders of elderly persons including special measures relevant to caregiver reports and provide useful tables to assist in differential diagnosis They also reflect on the ethical issues that often confront the assessor of an elderly individual informed consent confidentiality the right of bodily autonomy and self determination and appropriate feedback This book will be an invaluable resource for all those called on to evaluate older clients

A Handbook of Geriatric Neuropsychology Shane S. Bush, Brian P. Yochim, 2022-07-12 A Handbook of Geriatric Neuropsychology Practice Essentials Second Edition brings together experts in the field to integrate the knowledge and skills needed to understand and treat older adults who are experiencing problems with memory and other thinking skills With three new sections including coverage of other conditions beyond neuropsychological disorders special assessment contexts and more on interventions and ethics as well as multiple new chapters and significant updates from the first edition this book provides a strong foundation for clinicians educators and researchers invested in the wellbeing of older adults The impact and experience of aging like the practice of neuropsychology evolves over time Similarly through advances in science and professional techniques neuropsychological practice has continued to evolve Neuropsychological evaluation remains the most effective method of diagnosing age related cognitive decline cognitive difficulties that result from psychological factors and other related disorders as well as determining how the various disorders impact functioning and quality of life This book explores these areas and offers state of the art assessment techniques to assess changes in cognition and behavior and to distinguish normal changes from neuropathology This book is a go to resource and key reference for psychologists who serve older adults with known or suspected cognitive problems as well as those who are invested in promoting brain wellness It provides much of the information needed to establish and improve foundational and functional competencies in geriatric neuropsychology and establish practices that are personally and professionally rewarding all aimed at promoting the understanding and wellbeing of older adults

Handbook on the Neuropsychology of Aging and Dementia

Lisa D. Ravdin, Heather L. Katzen, 2012-09-14 With the aging of the baby boomers and medical advances that promote longevity older adults are rapidly becoming the fastest growing segment of the population. As the population ages so does the incidence of age-related disorders. Many predict that 15%–20% of the baby boomer generation will develop some form of cognitive decline over the course of their lifetime, with estimates escalating to up to 50% in those achieving advanced age. Although much attention has been directed at Alzheimer's disease, the most common form of dementia, it is estimated that nearly one third of those cases of cognitive decline result from other neuropathological mechanisms. In fact, many patients diagnosed with Alzheimer's disease likely have co-morbid disorders that can also influence cognition, i.e., vascular cognitive impairment, suggesting mixed dementias are grossly underdiagnosed. *The Clinical Handbook on the Neuropsychology of Aging and Dementia* is a unique work that provides clinicians with expert guidance and a hands-on approach to neuropsychological practice with older adults. The book will be divided into two sections: the first addressing special considerations for the evaluation of older adults and the second half focusing on common referral questions likely to be encountered when working with this age group. The authors of the chapters are experts and are recognized by their peers as opinion leaders in their chosen chapter topics. The field of neuropsychology has played a critical role in developing methods for early identification of late-life cognitive disorders as well as the differential diagnosis of dementia. Neuropsychological assessment provides valuable clinical information regarding the nature and severity of cognitive symptoms associated with dementia. Each chapter will reinforce the notion that neuropsychological measures provide the clinician with sensitive tools to differentiate normal age-related cognitive decline from disease-associated impairment, aid in differential diagnosis of cognitive dysfunction in older adults, as well as identify cognitive deficits most likely to translate into functional impairments in everyday life.

Psychological Assessment of Veterans Shane S. Bush, 2014 Psychological assessment is practiced in wide-ranging settings to address the varied clinical and administrative needs of veteran populations. Such assessment blends record review, clinical interviews of the veteran and collateral sources of information, behavioral observations, and psychological testing. This book promotes the care and well-being of veterans by bringing together knowledgeable and experienced psychologists to discuss a range of psychological assessment methods and procedures. It aims to help patients and their families, healthcare providers, and concerned citizens gain an improved understanding of veterans' cognitive functioning, emotional states, personality traits, behavioral patterns, and daily functioning. The book begins with a history of the psychological assessment of veterans and investigates its efficacy in different settings, including outpatient mental health, long-term care, primary care, home-based primary care, and telemental health. Later chapters address assessment of a variety of disorders or presenting problems, including substance use disorders, psychotic disorders, mood disorders, and suicidal thoughts and behavior, PTSD, and other anxiety disorders, attention deficit hyperactivity disorder, dementia, pain, and pain-related disorders, and polytrauma. The book concludes with important special considerations, including assessment of

symptom and performance validity assessment of homeless veterans and health related quality of life and ethical legal and professional issues Psychological Assessment of Veterans provides an essential reference and guide for clinical psychologists including those working in the subspecialties and psychology trainees who work with veterans **Handbook of Assessment in Clinical Gerontology** Peter A.
