Geomorphic Processes In Environments With Strong Seasonal Contrasts Vol Ii Geomorphic Systems Catena Supplement 13:

Geomorphic Processes in Environments with Strong Seasonal Contrasts Anton C. Imeson, Maria Sala, 1988

Geomorphic Processes in Environments with Strong Seasonal Contrasts: Hillslope processes Anton C. Imeson, Maria Sala, Adrian M. Harvey, International Geographical Union. Commission on Measurement, Theory, and Application in Geomorphology, 1988

Interpreting Pre-Quaternary Climate from the Geologic Record Judith Totman Parrish, 1998 The earth's pre Quaternary period more than two million years ago has been studied systematically only since the 1960's when geologists started to take seriously the concept that the continents have changed position on the earth's surface While previous books have dealt with climate models and paleoclimate this is the first to offer a sustained exploration of the methods that are the foundation of any interpretation of earth processes

Deserts and Desert Environments Julie J Laity, 2009-01-28 Taking a global perspective this book provides a concise overview of drylands including their physical biological temporal and human components Examines the physical systems occurring in desert environments including climate hydrology past and present lakes weathering hillslopes geomorphic surfaces water as a geomorphic agent and aeolian processes Offers an accessible introduction to the physical biological temporal and human components of drylands Investigates the nature environmental requirements and essential geomorphic roles of plants and animals in this stressful biological environment Highlights the impact of human population growth on climate desertification water resources and dust storm activity Includes an examination of surface atmosphere interactions and the impact of ENSO events

Soil Erosion and Sediment Redistribution in River Catchments Philip Neil Owens, Alison J. Collins, 2006 There can be little doubt that issues relating to soils and sediments are moving up the political agenda and a realization that we need to collectively manage and protect both soil and water resources In order to manage this delicate interface attention is being increasingly directed towards holistic land river management demanding a greater appreciation of the interaction between soils and sediments This book reviews the major achievements recently made in soil erosion and sediment redistribution research and management and identifies future requirements

Contemporary Meanings in Physical Geography Andre Roy, Stephen Trudgill, 2014-04-08 Over the past twenty years geography as an academic discipline has become more and more reflective asking the key questions What are we doing Why are we doing it These questions have so far been more enthusiastically taken up by human geography rather than physical geography Contemporary Meanings in Physical Geography aims to redress the balance Written and edited by a distinguished group of physical geographers Contemporary Meanings in Physical Geography comprises of a collection of international writer's thoughts which reveal personal motivations and look at tensions in the worlds of meaning in which physical geography is involved How are the meanings of the physical environment derived Is the future of physical geography one where the only or at least the dominant meanings

are framed in the contexts of environmental issues Covering a diverse and lively selection of topics the contributors of this book offer guides to the contemporary debates in the philosophy of physical geography and introduce the reader to its wider cultural significance This book is an essential companion to anyone studying or with an interest in physical geography

Arid Zone Geomorphology David S. G. Thomas, 2011-02-08 The new edition of Arid Zone Geomorphology aims to encapsulate the advances that have been made in recent years in the investigation and explanation of landforms and geomorphological processes in drylands Building on the success of the previous two editions the Third Edition has been completely revised and updated to reflect the latest developments in the field Whilst this latest edition will remain a comprehensive reference to the subject the book has been restructured to include regional case studies throughout to enhance student understanding and is clearly defined into five distinct sections Firstly the book introduces the reader to Large Scale Controls and Variability in Drylands and then moves on to consider Surface Processes and Characteristics The Work of Water The Work of the Wind The book concludes with a section on Living with Dryland Geomorphology that includes a chapter on geomorphological hazards and the human impact on these environments Once again recognised world experts in the field have been invited to contribute chapters in order to present a comprehensive and up to date overview of current knowledge about the processes shaping the landscape of deserts and arid regions In order to broaden the appeal of the Third Edition the book has been reduced in extent by 100 pages and the Regional chapters have been omitted in favour of the inclusion of key regional case studies throughout the book The Editor is also considering the inclusion of a supplementary website that could include further images problems and case studies

Catena Supplement, 1988

The Earth's Land Surface Kenneth J Gregory, 2010-03-23 Given the sheer scale of the topic under consideration here Professor Gregory does well to condense it into bite size pieces for the reader I recommend this text to all undergraduate students of physical geography and earth sciences particularly to those in their first and second years This book is a comprehensive and crucially inexpensive text that will provide students with a useful source on geomorphology Lynda York The Geographical Journal I would highly recommend this to anyone doing geology or geography at university as a go to book for geomorphology and landform Sara Falcone Teaching Earth Science An excellent source of information for anyone who needs a well informed easy to use reference volume to introduce them to the fascinating complexities of the earth's land surface past present and future Angela Gurnell Queen Mary University of London This introductory text details the land surface of the earth in a readable style covering the major issues key themes and sensitivities of the environments landscape Emphasising the major ideas and their development each chapter includes case studies and details of influential scientists not necessarily geomorphologists who have contributed to the progress of understanding Providing a very clear explanation of the understanding achieved and of the debates that have arisen the book is comprised of 12 chapters in four sections Visualising the land surface explains and explores the composition of the land surface and outlines how it has been studied Dynamics of the land surface considers the

dynamics affecting the earth's land surface including its influences processes and the changes that have occurred

Environments of the land surface looks to understand the land surface in major world regions highlighting differences between the areas

Management of the land surface is an examination of the current and future prospects of the management of the earth's land surface

With pedagogical features including further reading questions for discussion and a glossary this original lively text is authored by one of the leading experts in the field and will be core reading for first and second year undergraduates on all physical geography courses

Advances in Hillslope Processes M. G. Anderson, Susan M. Brooks, 1996

Mediterranean Desertification and Land Use C. Jane Brandt, John B. Thornes, 1996-12-09

Desertification of land degradation has become a major environmental issue in scientific and political circles

This product of the MEDALUS project forms an important part of the EU's initiative to manage changing semi arid environments

Vegetation and Erosion J. B. Thornes, 1990-07-19

Stressing the significance of vegetation in geomorphology an often ignored area it presents the results of the 1988 British Geomorphological Research Group conference which brought together work in progress or recently completed on plant processes and geomorphological interactions

According to the editor these results while encouraging are only a start indicating a preponderance of past work dealing with vegetation simply as an extrinsic variable

The text focuses on vegetation as a highly dynamic and vital component that affects virtually all processes and therefore all geomorphological histories

By raising these and other issues it indicates a variety of avenues for future investigation

Physical Geography K J Gregory, 2005-10-10

This four volume set begins by examining the knowledge of physical geography from the quantitative revolution to current state of mathematical models

The principal environment spheres for example the biosphere are examined to show the greater concern with environmental dynamics now central to the discipline

This work includes studies of environmental change looking at short term as well as longer term change and evaluating aspects of global change

Volume IV focuses on the total physical environment examining human activity and human impact environmental hazards and applied physical geography
