Geotechnology National Research Council (U.S.). Geotechnical Board,1989 **Geological and Geotechnical Engineering in the New Millennium** National Research Council,Division on Earth and Life Studies,Board on Earth Sciences and Resources,Committee on Geological and Geotechnical Engineering,Committee on Geological and Geotechnical Engineering in the New Millennium: Opportunities for Research and Technological Innovation,2006-01-31 The field of geoengineering is at a crossroads where the path to high tech solutions meets the path to expanding applications of geotechnology In this report the term geoengineering includes all types of engineering that deal with Earth materials such as geotechnical engineering geological engineering hydrological engineering and Earth related parts of petroleum engineering and mining engineering The rapid expansion of nanotechnology biotechnology and information technology begs the question of how these new approaches might come to play in developing better solutions for geotechnological problems This report presents a vision for the future of geotechnology aimed at National Science Foundation NSF program managers the geological and geotechnical engineering community as a whole and other interested parties including Congress federal and state agencies industry academia and other stakeholders in geoengineering research Some of the ideas may be close to reality whereas others may turn out to be elusive but they all present possibilities to strive for and potential goals for the future Geoengineers are poised to expand their roles and lead in finding solutions for modern Earth systems problems such as global change emissions free energy supply global water supply and urban systems *Geotechnology* National Research Council (U.S.). Geotechnical Board,Thomas R. Kuesel,1989 *Geotechnical Practice for Waste Disposal* D.E. Daniel,2012-12-06 Earth scientists and geotechnical engineers are increasingly challenged to solve environmental problems related to waste disposal facilities and cleanup of contaminated sites The effort has given rise to a new discipline of specialists in the field of environmental geotechnology To be effective environmental geotechnologists must not only be armed with the traditional knowledge of fields such as geology and civil engineering but also be knowledgeable of principles of hydrogeology chemistry and biological processes In addition the environmental geotechnologist must be completely up to date on the often complex cadre of local and national regulations must comprehend the often complex legal issues and sometimes mind boggling financial implications of a project and must be able to communicate effectively with a host of other technical specialists regulatory officials attorneys local land owners journalists and others The field of environmental geotechnology will no doubt continue to offer unique challenges The purpose of this book is to summarize the current state of practice in the field of environmental geotechnology Part One covers broadly applicable principles such as hydrogeology geochemistry and contaminant transport in soil and rock Part Two describes in detail the underlying principles for design and construction of new waste disposal facilities Part Three covers techniques for site remediation Finally Part Four addresses the methodologies for monitoring The topics of waste disposal and site remediation are extra ordinarily broad

Underground Engineering for Sustainable Urban Development National Research Council, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Committee on Geological and Geotechnical Engineering, Committee on Underground Engineering for Sustainable Development, 2013-02-26 For thousands of years the underground has provided humans refuge useful resources physical support for surface structures and a place for spiritual or artistic expression More recently many urban services have been placed underground Over this time humans have rarely considered how underground space can contribute to or be engineered to maximize its contribution to the sustainability of society As human activities begin to change the planet and population struggle to maintain satisfactory standards of living placing new infrastructure and related facilities underground may be the most successful way to encourage or support the redirection of urban development into sustainable patterns Well maintained resilient and adequately performing underground infrastructure therefore becomes an essential part of sustainability but much remains to be learned about improving the sustainability of underground infrastructure itself At the request of the National Science Foundation NSF the National Research Council NRC conducted a study to consider sustainable underground development in the urban environment to identify research needed to maximize opportunities for using underground space and to enhance understanding among the public and technical communities of the role of underground engineering in urban sustainability *Underground Engineering for Sustainable Urban Development* explains the findings of researchers and practitioners with expertise in geotechnical engineering underground design and construction trenchless technologies risk assessment visualization techniques for geotechnical applications sustainable infrastructure development life cycle assessment infrastructure policy and planning and fire prevention safety and ventilation in the underground This report is intended to inform a future research track and will be of interest to a broad audience including those in the private and public sectors engaged in urban and facility planning and design underground construction and safety and security
