Ecology And Management Of North American Savannas:

Ecology and Management of North American Savannas Guy R. McPherson, 2023-01-10 Savannas are ecosystems with a continuous grass layer and scattered trees or shrubs. These lands occupy nearly a third of the earth's land surface and are an important resource not only in world economies but also as repositories of biodiversity. Because savannas are generally thought of as tropical ecosystems, most reviews of the literature have tended to disregard savannas found in temperate zones. Yet these ecosystems are both extensive and diverse in North America, ranging from longleaf pine habitats along the Atlantic coastal plain to xeric piñon juniper communities of the Great Basin. Ecosystems seemingly disparate yet similar enough to merit study as savannas. This book provides an overview of the patterns and processes shared by these ecosystems and offers substantive ideas regarding future management and research efforts. It describes the composition, geographic distribution, climate, soils, and uses of savannas throughout North America, summarizing and integrating a wide array of literature. While discussing these ecological patterns and processes, McPherson develops a framework for implementing management practices and safeguarding the future of these important wildland ecosystems. *Ecology and Management of North American Savannas* takes a major step toward establishing the science of savanna ecology for North America. It encourages constructive debate and relevant research on these important systems and will also serve as a useful resource in biogeography, plant ecology, and rangeland management. *Tropical Biology and Conservation Management - Volume X*

Kleber Del Claro, Paulo S. Oliveira, Victor Rico-Gray, 2009-05-11 This *Encyclopedia of Tropical Biology and Conservation Management* is a component of the global *Encyclopedia of Life Support Systems (EOLSS)* which is an integrated compendium of twenty-one encyclopedias. Tropical environments cover the most part of still preserved natural areas of the Earth. The greatest biodiversity, as in terms of animals and plants as microorganisms, is placed in these hot and rainy ecosystems spread up and below the Equator line. Additionally, the most part of food products with vegetal or animal origin that sustain nowadays human beings is direct or undirected dependent of tropical productivity. Biodiversity should be looked at and evaluated not only in terms of numbers of species but also in terms of the diversity of interactions among distinct organisms that it maintains. In this sense, the complexity of web structure in tropical systems is a promise of future to nature preservation on Earth. In the chemicals of tropical plant and animals could be the cure to infinite number of diseases, new food sources, and who knows what more. Despite these facts, tropical areas have been exploited in an irresponsible way for more than 500 years due to the lack of an ecological conscience of men. Exactly in the same way we did with temperate areas and also tropical areas in the north of Equator line. Nowadays, it is estimated that due to human exploitation, nation conflicts, and social problems, less than 8% of tropical nature inside continental areas is still now untouchable. The extension of damage in the tropical areas of oceans is unknown. Thus, so all knowledge we could accumulate about tropical systems will help us as in the preservations of these important and threatened ecosystems as in a future recuperation when it was possible. Only

knowing the past and developing culture mainly that directed to peace to a better relationship among nations and responsible use and preservation of natural resources human beings will have a long future on Earth These volumes Tropical Biology and Natural Resources was divided in sessions to provide the reader the better comprehension possible of issue and also to enable future complementation and improvements in the encyclopedia Like we work with life we intended to transform this encyclopedia also in a life volume in what new information could be added in any time As president of the encyclopedia and main editor I opened the theme with an article titled Tropical Biology and Natural resources Historical Pathways and Perspectives providing the reader an initial view of the origins of human knowledge about the tropical life and what we hope to the future In the sequence we have more than 100 chapters distributed in ten sessions Tropical Ecology TE Tropical Botany TB Tropical Zoology TZ Savannah Ecosystems SE Desert Ecosystems DE Tropical Agriculture TA Natural History of Tropical Plants NH Human Impact on Tropical Ecosystems HI Tropical Phytopathology and Entomology TPE Case Studies CS This 11 volume set contains several chapters each of size 5000 30000 words with perspectives applications and extensive illustrations It is the only publication of its kind carrying state of the art knowledge in the fields of Tropical Biology and Conservation Management and is aimed by virtue of the several applications at the following five major target audiences University and College Students Educators Professional Practitioners Research Personnel and Policy Analysts Managers and Decision Makers and NGOs

Routledge Handbook of Ecological and Environmental Restoration Stuart K. Allison, Stephen D. Murphy, 2017-05-18 Ecological restoration is a rapidly evolving discipline that is engaged with developing both methodologies and strategies for repairing damaged and polluted ecosystems and environments During the last decade the rapid pace of climate change coupled with continuing habitat destruction and the spread of non native species to new habitats has forced restoration ecologists to re evaluate their goals and the methods they use This comprehensive handbook brings together an internationally respected group of established and rising experts in the field The book begins with a description of current practices and the state of knowledge in particular areas of restoration and then identifies new directions that will help the field achieve increasing levels of future success Part I provides basic background about ecological and environmental restoration Part II systematically reviews restoration in key ecosystem types located throughout the world In Part III management and policy issues are examined in detail offering the first comprehensive treatment of policy relevance in the field while Part IV looks to the future Ultimately good ecological restoration depends upon a combination of good science policy planning and outreach all issues that are addressed in this unrivalled volume

Western North American Juniperus Communities Oscar van Auken, 2007-12-04

In North America *Juniperus* woodlands occupy approximately 55 million hectares an area larger than the state of Texas. Various species of *Juniperus* have been increasing in density and are expanding into associated grasslands reducing the size of the grasslands. The reason for the *Juniperus* expansion is highly debated but has important implications for global change and fire regime studies. *Western North American Juniperus Communities* addresses various aspects of the biology, ecology and management of *Juniperus* woodlands and savannas by synthesizing past, current and proposed future research. The book will provide professionals with a solid background in *Juniperus* ecosystems enabling them to manage the communities for maximum sustained productivity and diversity. Although the book focuses on *Juniperus* communities in North America a discussion of other regions and larger research implications is included as well. *Savanna Woody Plants and Large Herbivores* Peter Frank Scogings, Mahesh Sankaran, 2019-07-25. Insights on current research and recent developments in understanding global savanna systems. Increasingly recognized as synonymous with tropical grassy biomes, savannas are found in tropical and sub tropical climates as well as warm temperate regions of North America. *Savanna Woody Plants and Large Herbivores* examines the interactions between woody plants and browsing mammals in global savannas focusing primarily on the C4 grassy ecosystems with woody components that constitute the majority of global savannas and discusses contemporary savanna management models and applications. This much needed addition to current research examines topics including the varying behavior of browsing mammals, the response to browsing by woody species and the factors that inhibit forage intake. Contributions from an international team of active researchers and experts compare and contrast different savanna ecosystems offering a global perspective on savanna functioning, the roles of soil and climate in resource availability and organism interaction and the possible impacts of climate change across global savannas. Fills a gap in literature on savanna management issues including biodiversity conservation and animal production. Applies concepts developed in other biomes to future savanna research. Complements contemporary books on savanna or large herbivore ecology. Focuses on the woody component of savanna ecosystems and large herbivore interactions in savannas. Compares tree-mammal systems of savannas and other eco systems of temperate and boreal regions. Provides numerous case studies of plant-mammal interactions from various savanna ecosystems. *Savanna Woody Plants and Large Herbivores* is a valuable addition to those in fields such as ecology, wildlife and conservation biology, natural resource management and environmental science.
