Climate change for forest policy-makers Food and Agriculture Organization of the United Nations,2019-02-18 The critical role of forests in climate change mitigation and adaptation is now widely recognized Forests contribute significantly to climate change mitigation through their carbon sink and carbon storage functions They play an essential role in reducing vulnerabilities and enhancing adaptation of people and ecosystems to climate change and climate variability the negative impacts of which are becoming increasingly evident in many parts of the world In many countries climate change issues have not been fully addressed in national forest policies forestry mitigation and adaptation needs at national level have not been thoroughly considered in national climate change strategies and cross sectoral dimensions of climate change impacts and response measures have not been fully appreciated This publication seeks to provide a practical approach to the process of integrating climate change into national forest programmes The aim is to assist senior officials in government administrations and the representatives of other stakeholders including civil society organizations and the private sector prepare the forest sector for the challenges and opportunities posed by climate change This document complements a set of guidelines prepared by FAO in 2013 to support forest managers incorporate climate change considerations into forest management plans and practices **Guide to the classical biological control of insect pests in planted and natural**

forests Food and Agriculture Organization of the United Nations, 2019-05-31 This publication explains the why and how of classical biological control in forestry and addresses the potential risks associated with such programmes. Written by a team of experts, it provides general theory and practical guidelines featuring 11 case studies of successful implementation efforts worldwide. While insect pests already damage millions of hectares of forest worldwide each year, the extent of such damage is increasing as the impacts of climate change become more evident and as international trade grows, facilitating the pests' spread. Classical biological control is a well-tried, cost-effective approach to the management of invasive forest pests, which involves the importing of natural enemies of non-native pests from their countries of origin with the aim of establishing permanent, self-sustaining populations capable of sustainably reducing pest populations below damaging levels.
