Ecorestructuring Implications For Sustainable Development:

The WTO, Agriculture and Sustainable Development Heinrich Wohlmeyer, Theodor Quendler, 2017-09-08 Despite the Doha declaration of November 2001 the failure to start a new round of global trade negotiations at Seattle in December 1999 and the hostility of protesters to the trade liberalization process and growing global economic and social disparities was a wake up call for the World Trade Organisation WTO The ambitious goal of this ground breaking book is to identify the strengths and weaknesses of liberalized world trade in particular in the agricultural sector and to investigate to what extent the current WTO agreements provide the necessary fail safe devices to react to trade related negative impacts on sustainability environmental protection and food security The background and interrelationship between the WTO the tenets of sustainable development and the unique features of the agriculture and forestry sectors are explored and conclusions regarding the deficits of the world trade system and its conflicts with basic societal goals such as sustainability are drawn Agriculture and forestry have a particular affinity with what the authors call strong sustainability and are to be among the major agenda items in forthcoming WTO negotiations The book proposes that sustainable agricultural production techniques such as integrated and organic farming provide a series of related services to community and environment which could be severely prejudiced by wholesale trade liberalization and the imposition of the large scale production methods of the mega trade giants of the USA and Europe And yet the concept of sustainability is referred to only tangentially in the existing WTO agenda The WTO Agriculture and Sustainable Development argues that without a formal recognition of this failing the premise that free trade is inherently advantageous for all countries is a falsehood Further unfettered liberalization is unsustainable and a social and environmental multilateral framework must be agreed to reinterpret or adapt a host of WTO regulations that are at odds with sustainable development The core problem is that under the current system import duties can only be differentiated by direct goods and services and not by their means of production sustainable or otherwise Therefore a range of environmental policy measures in the agricultural sector such as the consideration of product life cycles the internalization of external costs and a coupling of trade liberalization with ecological obligations are proposed by the authors In addition they argue that unsustainable economic short termism must be curbed and the use of the stick of trade sanctions and the carrot of financial benefits for good environmental performance be permitted to promote sustainable agricultural practices This book will contribute greatly in addressing the lack of basic theoretical arguments at the intersection between trade and sustainable development a failing that has already been bemoaned by trade policy makers It is highly recommended reading for all those involved or interested in the WTO negotiations whether from multilateral organizations governments industry or civil society

Ecological Security Dennis Pirages, Theresa Manley DeGeest, 2004 Global environmental politics has emerged from its initial incarnation in the arena of low politics and is rapidly becoming a high politics concern Concern over water pollution air pollution deforestation and related basic environmental issues is

giving way to a broader ecological security agenda In this pathbreaking book Dennis Clark Pirages and Theresa Manley DeGeest argue for dramatically broadening the context in which security priorities are established in an age of increasing globalization Addressing the very fundamental question of the sources of premature human deaths and associated insecurity both historically and in the contemporary world the authors observe that in the twentieth century starvation killed nearly as many people as did military conflict But disease was responsible for killing nearly fourteen times as many people as was warfare And in the contemporary world of the twenty first century environmental terrorism and biological warfare are blurring the traditional distinctions between natural disasters accidental deaths and military casualties Ecological Security moves the analysis of global environmental and resource issues to the next level by developing an eco evolutionary perspective for analyzing emerging problems associated with rapid globalization Preserving future ecological security will depend upon maintaining dynamic equilibriums among human populations and between them and pathogenic microorganisms other species and the sustaining capabilities of nature This eco evolutionary framework is used to anticipate and analyze emerging demographic ecological and technological discontinuities and dilemmas associated with rapid globalization The authors conclude by stressing the need for new kinds of global public goods to mitigate the harshest impacts of these rapid and interrelated changes

Implementing Ecological Integrity Philippe Crabbé, Alan J. Holland, Lech Ryszkowski, L. Westra, 2012-12-06 This book contains some of the papers which were presented at the NATO Science Environmental Security Advanced Research Workshop on Implementing Ecological Integrity Restoring Regional and Global Environmental and Human Health held in Budapest from June 26 to July 1 1999 All papers presented are summarized in the Introduction and in some cases shorter versions are published A multidisciplinary core of American and Western European participants had met over the preceding years to discuss the concept of ecological integrity The term ecological integrity is found in environmental policy documents but generally is not defined It competes with other recent terms or environmental narratives such as ecosystem health and sustainable development and also with older ones such as conservation Therefore it is deemed important not only to sort out the definitions of these concepts but also to find out whether their practical implications differ Moreover it was interesting to find out whether participants from Central and Eastern European Countries CEEC and more generally from NATO partner countries would be first responsive to this concept and second would hold different views of it This explains the broad albeit not always consistent range of topics which are covered in this book The core group learned that CEEC and other NATO partners participants were responsive to the concept but that they were less exclusive of human influence

Governing the Energy Transition Geert Verbong,Derk Loorbach,2012-03-29 The Energy Transition the inevitable shift away from cheap centralized largely fossil based energy systems is one of the core challenges of our time This book provides a coherent and novel insight into the nature of this challenge and possible strategies to accelerate and guide such transitions It brings together prominent European scholars and practitioners from the fields of energy transition research and governance to draw attention to the current complex dynamics in the energy domain and offer elegant and provocative explanations for current crises and lock ins They identify multiple energy transition pathways that emerge and increasingly compete and emphasize the need and possibilities for novel governance By analysing the complexity of energy transition processes and the difficulties in shifting to sustainable pathways this text questions the extent to which actually governing energy transitions is already reality just an illusion or a bare necessity **Proceedings of the International Conference**

Confronting Consumption Thomas Princen,Michael Maniates,Ken Conca,2002-06-21 Comforting terms such as

sustainable development and green production frame environmental debate by stressing technology not green enough economic growth not enough in the right places and population too large Concern about consumption emerges if at all in benign ways as calls for green purchasing or more recycling or for small changes in production processes Many academics policymakers and journalists in fact accept the economists view of consumption as nothing less than the purpose of the economy Yet many people have a troubled intuitive understanding that tinkering at the margins of production and purchasing will not put society on an ecologically and socially sustainable path Confronting Consumption places consumption at the center of debate by conceptualizing the consumption problem and documenting diverse efforts to confront it In Part 1 the book frames consumption as a problem of political and ecological economy emphasizing core concepts of individualization and commoditization Part 2 develops the idea of distancing and examines transnational chains of consumption in the context of economic globalization Part 3 describes citizen action through local currencies home power voluntary simplicity ad busting and product certification Together the chapters propose cautious consuming and better producing as an activist and policy response to environmental problems The book concludes that confronting consumption must become a driving focus of contemporary environmental scholarship and activism

Sustainable Technology Development Paul Weaver,Leo Jansen,Geert van Grootveld,Egbert van Spiegel,Philip Vergragt,2017-09-08 In the time it takes to read this sentence about fifteen people will be added to the world s population Read the sentence again and there will be thirty Tomorrow each of these people will be demanding greater prosperity Production and consumption are increasing fast but will have to grow even faster in the future to keep up with population growth and a world increasingly divided by inequality How should we react to these trends Certainly many use growth figures to forecast disaster But there is an alternative vision one of a sustainable future in which growth is seen not as a threat but as the driving force behind innovation This is the scenario worked out in the Netherlands by Sustainable Technology Development STD a five year programme of research and learning by doing based on setting up new innovation networks and working with new methods to search for sustainable technological solutions In order to make sustainability tangible STD made a leap in time What human needs will have to be satisfied fifty years from now Taking a sustainable future vision as a starting point STD demonstrated what steps we should take today for new technologies and systems to be in place in time These results are now available for the first time in a comprehensive specifically written English language book together with a description of the unique working method of STD and the results and key lessons from a set of the programme s illustrative case studies This book serves as a manual for industry governments and social leaders wanting to prepare themselves for a sustainable future Sustainable Technology Development sets out the programme s underpinning philosophy and describes its approach methods and findings Delivering sustainability means finding ways to meet human needs using a fraction of the natural resources we use today The world s richer nations would be wise to target at least ten fold improvements by 2050 in the productivity with which conventional natural resources and environmental services are used And they need to bring new sustainable resources on stream to augment the resource base and replace the use of unsustainable alternatives Sustainable Technology Development marks a significant contribution to our understanding of innovation processes and how these might be influenced in favour of sustainable technology development In principle

technology could play a pivotal role in sustainable development Whether it does or not depends on whether innovators can be encouraged to make this an explicit goal adopt long term time horizons and search for renewable technologies Given the long lead times involved there is no time to waste in beginning the search The STD programme has begun to make inroads into one of the most urgent of all needs concerning sustainable development that for innovation in the innovation process itself
