The Songs of Sappho Sappho, Marion Mills Miller, 1925 **"The" Historians' History of the World** Henry Smith Williams, 1907 **Carbon Management** National Research Council, Division on Earth and Life Studies, Board on Chemical Sciences and Technology, Chemical Sciences Roundtable, 2001-08-15 Considerable international concerns exist about global climate change and its relationship to the growing use of fossil fuels Carbon dioxide is released by chemical reactions that are employed to extract energy from fuels and any regulatory policy limiting the amount of CO₂ that could be released from sequestered sources or from energy generating reactions will require substantial involvement of the chemical sciences and

technology R D community Much of the public debate has been focused on the question of whether global climate change is occurring and if so whether it is anthropogenic but these questions were outside the scope of the workshop which instead focused on the question of how to respond to a possible national policy of carbon management Previous discussion of the latter topic has focused on technological economic and ecological aspects and on earth science challenges but the fundamental science has received little attention This workshop was designed to gather information that could inform the Chemical Sciences Roundtable in its discussions of possible roles that the chemical sciences community might play in identifying and addressing underlying chemical questions

Implications of the Euro Mark Baimbridge, Brian Burkitt, Philip Whyman, 2006-05-02 To date critical analysis of the EMU project has largely been advanced from the centre right spectrum of British politics Comparable questions from the centre left have failed to find a coherent voice Although the European fault line cannot be characterized as a neat Left Right issue there are noticeable divisions in opinion across British business the trade union movement and within the Labour Party Offering a unique insight into this key debate from the centre left eurosceptic view point this book provides a rigorous analysis of all the salient economic and political issues of concern such as the economics of a single currency employment and social implications sovereignty political determination The arguments presented in this volume highlight the emergence of a coherent alternative to deepening economic integration as a platform to build a just and equitable society Contributions are drawn from leading academics trade union leaders and prominent politicians both from the Labour Party and the wider progressive Left in British politics This informative and thought provoking book will be indispensable reading for students and practitioners in economics politics and international relations as well as those interested in this highly contentious topic

Breaking the Surface Douglass Whitfield Bailey, 2018 In *Breaking the Surface* Doug Bailey offers a radical alternative for understanding Neolithic houses providing much needed insight not just into prehistoric practice but into another way of doing archaeology Using his years of fieldwork experience excavating the early Neolithic pit houses of southeastern Europe Bailey exposes and elucidates a previously under theorized aspect of prehistoric pit construction the actions and consequences of digging defined as breaking the surface of the ground *Breaking the Surface* works through the consequences of this redefinition in order to redirect scholarship on the excavation and interpretation of pit houses in Neolithic Europe offering detailed critiques of current interpretations of these earliest European architectural constructions The work of the book is performed by juxtaposing richly detailed discussions of archaeological sites Etton and The Wilsford Shaft in the UK and Magura in Romania with the work of three artists who cut Ron Athey Gordon Matta Clark Lucio Fontana with deep and detailed examinations of the philosophy of holes the perceptual psychology of shapes and the linguistic anthropology of cutting and breaking words as well as with cultural diversity in framing spatial reference and through an examination of pre modern ungrounded ways of living *Breaking the Surface* is as much a creative act on its own in its mixture of work from disparate periods and regions its use of radical text interruption

and its juxtaposition of text and imagery as it is an interpretive statement about prehistoric architecture Unflinching and exhilarating it is a major development in the growing subdiscipline of art archaeology Chaos, Cosmos and Creation in Early Greek Theogonies Olaf Almquist, 2022-01-13 Cosmological narratives like the creation story in the book of Genesis or the modern Big Bang are popularly understood to be descriptions of how the universe was created However cosmologies also say a great deal more Indeed the majority of cosmologies ancient and modern explore not simply how the world was made but how humans relate to their surrounding environment and the often thin line which separates humans from gods and animals Combining approaches from classical studies anthropology and philosophy this book studies three competing cosmologies of the early Greek world Hesiod's Theogony the Orphic Derveni Theogony and Protagoras creation myth in Plato's eponymous dialogue Although all three cosmologies are part of a single mythic tradition and feature a number of similar events and characters Olaf Almquist argues they offer very different answers to an ongoing debate on what it is to be human Engaging closely with the ontological turn in anthropology and in particular with the work of Philippe Descola this book outlines three key sets of ontological assumptions analogism pantheism and naturalism found in early Greek literature and explores how these competing ontological assumptions result in contrasting attitudes to rituals such as prayer and sacrifice

Most, 2022 *Studies on the Derveni Papyrus* volume II brings together two new editions of the

first fragmentarily extant columns of the Derveni Papyrus and seven scholarly articles devoted to their interpretation The Derveni Papyrus is by far the most important textual discovery of the 20th century regarding early Greek philosophy religion exegetical theory and practice linguistic ideas and a host of other areas and issues But the editorial and interpretative history of this extraordinary document has been very checkered While the interpretation of the better preserved later columns is still highly controversial in many regards at least the text of those columns has by and large found a scholarly consensus but the editorial and interpretative situation with the worse preserved first columns is quite different This volume offers not one but two editions of the first columns by Richard Janko and by Valeria Piano given that it is not currently possible to agree upon a single edition and it explains clearly and in detail the papyrological problems and doubts that lead to these two editions making it possible for readers even non papyrologists to form their own informed judgment about the most likely readings to be adopted Furthermore it contains a number of articles by leading scholars on the Derveni Papyrus above all offering original solutions to the question of the relation between the earlier and the later columns but also providing analysis and interpretation of other related problems
