Environmental—Chlorine, which is commonly used in the manufacture of plastics, is being phased out of production by DuPont Co. in a voluntary effort to reduce the use of the chemical. The company has announced that it will phase out production of polychlorinated biphenyls (PCBs) by 1990. PCBs are used in a variety of electrical and electronic equipment. RESEARCH The first of the studies by the Swiss team, which was published in *Environmental Microbiology*, investigated the role of bacteria in the formation of soil aggregates. The researchers found that bacteria play a key role in the formation of soil aggregates, which are the building blocks of soil structure. The study also found that the presence of bacteria in soil aggregates is linked to the presence of organic matter, which is a key component of soil fertility.

The Educator's Guide To Substance Abuse Prevention Sanford Weinstein,1999-08-01 The Educator's Guide to Substance Abuse Prevention is for educators and other school personnel who are concerned about student drug use and school violence. It will help them to appreciate and use their humanity professional skills educational ideals and the school curriculum as tools for substance abuse prevention. Teachers' concerns are addressed in several ways. First, the text provides a guide through which they may resolve personal and professional concerns about the commitments, limits, and boundaries of their working relationships with students. Second, it describes tasks that teachers can perform and mental health issues they can address in creating classroom policies, procedures, and rules to promote healthful learning activity in the classroom. Third, the author summarizes and interprets research and theory about substance abuse as they apply specifically to educational prevention and to professional teaching practice, arguing that classroom management strategies, learning activities, and social interaction are a teacher's primary tools of prevention and showing how teachers may use these tools in any curricular area and without direct reference to drugs. A highlight of this text is its emphasis on helping teachers to explore drug-related issues from within the context of their own curricular specialties and to integrate substance abuse prevention with the curriculum in many school subjects, including the arts, literature, social studies, history, government, science, and culture. Action-oriented prevention strategies based on these content areas are suggested. The Educator's Guide to Substance Abuse Prevention focuses primarily on teaching, learning, and prevention rather than on information about drugs; helps teachers to better use what they already do know and are in order to respond competently, responsibly, and with sensitivity to the needs of their students; attends to the needs of teachers who do prevention work and the needs of children who are the target of prevention efforts; describes student disappointment and disillusionment with family, school, and community as sources of risk; and the legitimate domain in which teachers may serve a curative role. Provides extensive coverage of historical, social, and cultural issues related to substance abuse and school violence and alerts teachers to the risk to children posed by extremist adult groups, prominent negative role models, popular culture, and peer pressure. [The Education-drug Use Connection](#) Jerald G. Bachman,2008 Does success in school protect teenagers from drug use? Does drug use impair scholastic success? This book tackles a key issue in adolescent development and health: the education-drug use connection. The authors examine the links and likely causal connections between educational experiences, delinquent behavior, and adolescent use of tobacco.

alcohol marijuana and cocaine The book uses data from the University of Michigan's Monitoring the Future project It focuses on a large and nationally representative sample of 8th grade students in the United States who were initially surveyed in 1991 1993 and then followed over the vitally important developmental period between ages 14 and 22 The volume uses a variety of statistical analysis techniques and the findings can be understood by individuals with limited as well as with extensive backgrounds in research design The findings convincingly demonstrate that if young people can be successful in school it can improve a broad range of outcomes in their lives not the least of which is their ability to resist pressures to use drugs The book provides a summary of the findings and conclusions a review of relevant literature a detailed discussion of the survey and analysis methods the academic attainment of those in the longitudinal panel the delinquent behaviors of panel members as they relate to measures of educational success and the patterns of initiation continuation and cessation for each substance cigarettes marijuana cocaine and alcohol This book is intended for anyone who deals with education and or substance use including educational developmental and social psychologists sociologists epidemiologists educators and policy makers The analysis of panel survey data using a variety of techniques will also appeal to survey methodologists and students
