Ayyub, 2001-06-27 Experts despite their importance and value can be double edged swords They can make valuable contributions from their deep base of knowledge but those contributions may also contain their own biases and pet theories Therefore selecting experts eliciting their opinions and aggregating their opinions must be performed and handled carefully w *Risk and Uncertainty in Dam Safety* Desmond N. Dias, Alec Morton, John Quigley, 2017-11-16 This book is about elicitation the facilitation of the quantitative expression of subjective judgement about matters of fact interacting with subject experts or about matters of value interacting with decision makers or stakeholders It offers an integrated presentation of procedures and processes that allow analysts and experts to think clearly about numbers particularly the inputs for decision support systems and models This presentation encompasses research originating in the communities of structured probability elicitation calibration and multi criteria decision analysis often unaware of each other s developments Chapters 2 through 9 focus on processes to elicit uncertainty from experts including the Classical Method for aggregating judgements from

multiple experts concerning probability distributions the issue of validation in the Classical Method the Sheffield elicitation framework the IDEA protocol approaches following the Bayesian perspective the main elements of structured expert processes for dependence elicitation and how mathematical methods can incorporate correlations between experts Chapters 10 through 14 focus on processes to elicit preferences from stakeholders or decision makers including two chapters on problems under uncertainty utility functions and three chapters that address elicitation of preferences independently of or in absence of any uncertainty elicitation value functions and ELECTRE Two chapters then focus on cross cutting issues for elicitation of uncertainties and elicitation of preferences biases and selection of experts Finally the last group of chapters illustrates how some of the presented approaches are applied in practice including a food security case in the UK expert elicitation in health care decision making an expert judgement based method to elicit nuclear threat risks in US ports risk assessment in a pulp and paper manufacturer in the Nordic countries and elicitation of preferences for crop planning in a Greek region

Expert Knowledge and Its Application in Landscape Ecology Ajith H. Perera, C. Ashton Drew, Chris J. Johnson, 2011-10-21 Typically landscape ecologists use empirical observations to conduct research and devise solutions for applied problems in conservation and management In some instances they rely on advice and input of experienced professionals in both developing and applying knowledge Given the wealth of expert knowledge and the risks of its informal and implicit applications in landscape ecology it is necessary to formally recognize and characterize expert knowledge and bring rigor to methods for its applications In this context the broad goal of this book is to introduce the concept of expert knowledge and examine its role in landscape ecological applications We plan to do so in three steps First we introduce the topic to landscape ecologists explore salient characteristics of experts and expert knowledge and describe methods used in capturing and formalizing that knowledge

Second we present examples of research in landscape ecology from a variety of ecosystems and geographic locations that formally incorporate expert knowledge These case studies address a range of topics that will interest landscape ecologists and other resource management and conservation professionals including the specific roles of expert knowledge in developing testing parameterizing and applying models estimating the uncertainty in expert knowledge developing methods of formalizing and incorporating expert knowledge and using expert knowledge as competing models and a source of alternate hypotheses Third we synthesize the state of knowledge on this topic and critically examine the advantages and disadvantages of incorporating expert knowledge in landscape ecological applications The disciplinary subject areas we address are broad and cover much of the scope of contemporary landscape ecology including broad scale forest management and conservation quantifying forest disturbances and succession conservation of habitats for a range of avian and mammal species vulnerability and conservation of marine ecosystems and the spread and impacts of invasive plants This text incorporates the collective experience and knowledge of over 35 researchers in landscape ecology representing a diverse range of disciplinary subject areas and geographic locations Through this text we will catalyze further thought and investigations on expert knowledge among the target readership of researchers practitioners and graduate students in landscape ecology

Geological Repository Systems for Safe Disposal of Spent Nuclear Fuels and Radioactive Waste Michael J Apted, Joonhong Ahn, 2010-07-27 Geological disposal has been internationally adopted as the most effective approach to assure the long term safe disposition of the used nuclear fuels and radioactive waste materials produced from nuclear power generation nuclear weapons programs medical treatments and industrial applications Geological repository systems take advantage of natural geological barriers augmented with engineered barrier systems to isolate these radioactive materials from the environment and from future populations Geological repository systems for safe disposal of spent nuclear fuels and radioactive waste critically reviews the state of the art technologies scientific methods regulatory developments and social engagement approaches directly related to the implementation of geological repository systems Part one introduces geological disposal including multiple barrier geological repositories as well as reviewing the impact of nuclear fuel recycling practices and underground research laboratory activities on the development of disposal concepts Part two reviews geological repository siting in different host rocks including long term stability analysis and radionuclide transport modelling Reviews of the range of engineered barrier systems including waste immobilisation technologies container materials low pH concretes clay based buffer and backfill materials and barrier performance are presented in Part three Part four examines total system performance assessment and safety analyses for deep geological and near surface disposal with coverage of uncertainty analysis use of expert judgement for decision making and development and use of knowledge management systems Finally Part five covers regulatory and social approaches for the establishment of geological disposal programs from the development of radiation standards and risk informed performance based regulations to

environmental monitoring and social engagement in the siting and operation of repositories With its distinguished international team of contributors Geological repository systems for safe disposal of spent nuclear fuels and radioactive waste is a standard reference for all nuclear waste management and geological repository professionals and researchers Critically reviews the state of the art technologies scientific methods regulatory developments and social engagement approaches related to the implementation of geological repository systems Chapters introduce geological disposal and review the development of disposal concepts Examines long term stability analysis the range of engineered barrier systems and barrier performance

Assessing Nanoparticle Risks to Human Health Gurumurthy Ramachandran,2011-09-14 The book will take a systematic look at nanoparticle risks within the paradigm of risk assessment consider the limitations of this paradigm in dealing with the extreme uncertainties regarding many aspects of nanoparticle exposure and toxicity and suggest new methods for assessing and managing risks in this context It will consider the occupational environment where the potential for human exposure is the greatest as well as the issues relevant to occupational exposure assessment e g the exposure metric and the evidence from toxicological and epidemiological studies A chapter will be devoted to how conventional risk assessment can be carried out for a candidate nanoparticle e g carbon nanotubes and the limitations that arise from this approach We will propose several alternate methods in another chapter including screening assessments and adapting the rich methodological literature on the use of experts for risk assessment Another chapter will deal with non occupational populations their susceptibilities and life cycle risk assessments There will be a chapter on current risk management and regulatory oversight frameworks and their adequacy This chapter will also include a discussion of U S and E U approaches to risk assessment as well as corporate approaches
