The elderly represent the fastest growing segment of the population in developed countries reflected in the patient population presenting to EDs and hospitals. These patients more often than not have greater comorbidities, more complicated workups and utilize more laboratory and radiologic services. This text is designed to teach emergency physicians how best to care for this specific demographic of patients. It addresses physiologic changes, high risk conditions and atypical presentations associated with elderly patients in the ED that result in frequent misdiagnosis or delays in diagnosis. It instructs the readers how best to care for elderly patients in order to minimize morbidity and mortality, addressing some of the difficult psychosocial issues that confront health care providers that care for elderly patients such as psychiatric disease and end of life care. The utility of this text is not limited to emergency physicians but it should be useful to all health care providers involved in the treatment of elderly patients with acute medical or surgical conditions.

The Handbook of Next-Generation Emergency Services Barbara Kemp, Bart Lovett, 2021-02-28. This exciting new resource comprehensively describes Next Generation Emergency Services. It will enable implementers, regulators, legal and technical professionals to understand how the introduction of this new approach to delivering emergency services will impact their work. Beginning with an overview of the field and explaining what will change as the transition is made from circuit switched to IP based networks, the book provides guidance and detail related to the technologies that enable Next Generation services, the current state of emergency services, how to plan and execute a move to a standards compliant NG9 1 1 service including the network design, the operations and maintenance procedures and the legal and regulatory requirements and mandates. This Handbook explains NG9 1 1 networks, functions that they provide, the environments in which they are implemented and the process by which they can be built and maintained. It provides a comparison to Basic 9 1 1 and E9 1 1 systems that dominate the field of emergency services today. The reader is guided through an emergency call from its inception by the Caller to the Public Safety Answering Point (PSAP), Call Taker to Dispatch to First Responders, explaining how Basic 9 1 1, E9 1 1 and NG9 1 1 support each leg of this journey. Chapters explaining the underlying networks and the service standards provide details to those who need them for their daily work or as reference. Next Generation 9 1 1 services are carried over data networks that use the Internet Protocol (IP) to establish communications flows between the calling and called parties. These flows are created in a fundamentally different way than are those created on the circuit switched networks that carry Basic 9 1 1 and E9 1 1 calls. The differences between packet switched and circuit switched networks are explained and the challenges and opportunities offered by creating call flows using packet switched networks are also described.

Doing Research in Emergency and Acute Care Michael P. Wilson, Kama Z. Guluma, Stephen R. Hayden, 2015-11-09. A practical guide to understanding and navigating the unique challenges faced by physicians and other professionals who wish to undertake research in the ED or other acute care setting.

Focusing on the hyper acute and acute care environment and fulfilling two closely related needs 1 the need for even seasoned researchers to understand the specific logistics and issues of doing research in the ED and 2 the need to educate clinically active physicians in research methodology This new text is not designed to be a complex encyclopedic resource but instead a concise easy to read resource designed to convey key need to know information within a comprehensive framework Aimed at the busy brain either as a sit down read or as a selectively read reference guide to fill in knowledge gaps chapters are short compartmentalized and are used strategically throughout the text in order to introduce and frame concepts This format makes it easy and even entertaining for the research novice to integrate and absorb completely new and typically dry material The textbook addresses aspects of feasibility efficiency ethics statistics safety logistics and collaboration in acute research Overall it grants access for the seasoned researcher seeking to learn about acute research to empathically integrate learning points into his or her knowledge base As the ED is the primary setting for hyper acute and acute care and therefore a prime site for related clinical trial recruitment and interventions the book presents specific logistical research challenges that researchers from any discipline including physicians research nurse coordinators study monitors or industry partners need to understand in order to succeed
