In "Redefining Reality: Philosophical and Epistemological Foundations of a New Mathematics," we embark on a transformative journey to reshape the landscape of mathematical thought. This exploration is not just about altering mathematical principles but about rethinking the very fabric of reality as understood through the lens of mathematics. Our current mathematical framework, marked by its complexity and abstract nature, often diverges from intuitive understanding and real-world applicability. The New Mathematics proposes a radical shift — a move towards a system that is deterministic, unified, and inherently more aligned with human intuition. This paper delves into the philosophical underpinnings of this shift, reevaluating the nature of mathematical truth and the role of mathematics in interpreting and understanding our world. It offers a vision of a new era in mathematics, one that simplifies complex concepts and unites disparate branches into a coherent whole, profoundly impacting both theoretical exploration and practical application.

Keywords: New Mathematics, philosophical foundations, epistemological considerations, deterministic calculus, unified algebra, simplified number theory, deterministic probability, linear systems theory, universal computational theory, quantum-classical mechanics bridge, educational reform, practical applications, mathematical reality redefinition.
