Julie and Bethan's Equilibrium Choices when Offered Insurance at a Premium Based on the Average Probability of Being Sued

When offered insurance at a premium of €.30 per euro of coverage. Julie buys less than full insurance, point e₃, since the insurance is actuarially unfair against her. If she could, Bethan would choose point b, but the insurance company will not allow her to over-insure. Equilibrium in Insurance Markets with Asymmetric Information and Adverse Selection Jonathan A. K. Cave, 1984 This report examines possible outcomes of greater competition in insurance markets. The report describes the nature of insurance offerings in equilibrium if firms offer multiple policies but it replaces the conventional assumption that each policy must earn nonnegative profits with the more realistic requirement that the portfolio of policies offered by the firm earn nonnegative profits in the aggregate Theorems regarding the existence optimality and uniqueness of the subsidy equilibrium are presented together with a simple characterization of the subsidy equilibrium and a comparison with existing equilibrium notions Because the subsidy patterns from low to high that emerge under this formulation appear to characterize multiple option insurance plans such as the Federal Employees Health Benefits Plan this model may be more useful than conventional methods in the analysis of such plans How Adverse Selection Affects the Health Insurance Market Paolo Belli, 2001 There may be a price to pay in terms of inefficient coverage if competition among health insurers is encouraged as a way to give patients greater choice and to achieve better control over insurance providers Health Services Restructuring in Canada Charles M.
