Both Sides of the Border Linda Fernandez, Richard T. Carson, 2005-12-30 The Mexican United States border represents much more than the meeting place of two nations Our border communities are often a line of first defense absorbing the complex economic environmental and social impacts of globalization that ripple through the region In many ways our success or failure in finding solutions for the environmental social and economic issues that plague the region may well define our ability to meet similar challenges thousands of miles from the border zone Border residents face the environmental security concerns posed by water scarcity and transboundary air pollution the planning and infrastructure needs of an exploding population the debilitating effects of inadequate sanitary and health facilities and the crippling cycle of widespread poverty Yet with its manifold problems the border area remains an area of great dynamism and hope a

multicultural laboratory of experimentation and grass roots problem solving Indeed as North America moves towards a more integrated economy citizen action at the local level is pushing governments to adapt to the driving forces in the border area by creating new institutional arrangements and improving old ones If there is one defining feature of this ground up push for more responsive transboundary policies and institutions it is a departure from the closed formalistic models of the past to a more open transparent and participatory model of international interaction Sterile Insect Technique V.A. Coates,2007-01-09 Sometimes by accident and sometimes on purpose humans have transported plants and animals to new habitats around the world Arriving in ever increasing numbers to American soil recent invaders have competed with preyed on hybridized with and carried diseases to native species transforming our ecosystems and creating anxiety among environmentalists and the general public But is American anxiety over this crisis of ecological identity a recent phenomenon Charting shifting attitudes to alien species since the 1850s Peter Coates brings to light the rich cultural and historical aspects of this story by situating the history of immigrant flora and fauna within the wider context of human immigration Through an illuminating series of particular invasions including the English sparrow and the eucalyptus tree what he finds is

that we have always perceived plants and animals in relation to ourselves and the polities to which we belong Setting the saga of human relations with the environment in the broad context of scientific social and cultural history this thought provoking book demonstrates how profoundly notions of nationality and debates over race and immigration have shaped American understandings of the natural world Life Out of Bounds Chris Bright,1998 Bright a research assistant at the environmental educational non profit organization Worldwatch Institute describes and evaluates the spread of alien or exotic organisms that are destroying ecosystems around the world Annotation copyrighted by Book News Inc Portland OR
