## **Ergonomics Man In His Working Environment:**

Ergonomics K. Murrell, 2012-12-06 Until quite recently conditions in industry were often rough Long hours were worked in insanitary and murky workshops often with little regard to the effects upon the workpeople who were considered to be expendable Now however these adverse conditions have been recognized and so remedied that there remains little in industrial conditions to disturb the public conscience This does not mean that conditions of work in office or factory are perfect The obvious and dramatic abuses of the human frame may have gone but in their place have arisen stresses and strains which taking effect only in the long term are generally undramatic and often unrecognized They exist none the less No organized effort to study the effect of working conditions on man's performance was made until the end of World War I when the Industrial Fatigue Research Board was set up For the first time men trained in the human sciences entered industry to study men at work They made contributions which set a new standard of scientific investigation into human performance and allowed executive action on the basis of evidence rather than of hunch The Board's work differed from the contribution of Gilbreth in America in that the principles of Motion Study which he developed were to a large extent based on intelligent observation rather than controlled experiment During the 1920s the National Institute of Industrial Psychology was founded and there was close collaboration between it and the I F R B      **Ergonomics** K. Human factors is a scientific discipline which examines the interactions between components of a system whilst aspiring to improve system performance and human well being Paramedics are often the first on scene in emergency and urgent situations and the quality of care that patients receive is dependent on the performance of the paramedic often working alone or as part of a small team and frequently in challenging environments This book is an accessible and informative guide to the concepts of human factors and ergonomics in the field of paramedic practice It shows how an understanding and application of these principles can improve paramedic performance and well being and ultimately patient care The system components of paramedic practice consist of the patient the environment the equipment the paramedic and their team the organisation they work in and the wider culture This book brings together a range of specialist contributors to consider each of these components in detail through chapters which explore situational awareness human centred design the well being of the paramedic systems thinking and safety culture among other topics It aims to provide paramedics with practical advice and the knowledge of human factors that they need to make their first contact with a patient in need as safe and effective as
