**Learning Objectives:** To explain the importance of the management and control of the firm's financial resources.

**Case Report**—A 60-year-old male patient with a 10-year history of type 2 diabetes mellitus and a 20-year history of hypertension presented to the emergency department with a 2-day history of severe, constant, and progressive abdominal pain. The pain was located in the right upper quadrant and was associated with nausea and vomiting. The patient had no fever, chills, or changes in bowel habits. He had no history of trauma, alcohol consumption, or recent travel. His medical history was significant for type 2 diabetes mellitus, hypertension, and hyperlipidemia. He was currently taking insulin, lisinopril, and atorvastatin. His vital signs were stable, and his physical examination was unremarkable. Laboratory tests showed a white blood cell count of 12,000/mm<sup>3</sup> with a left shift, a serum amylase level of 120 U/L, and a serum lipase level of 180 U/L. His abdominal ultrasound showed a normal-sized gallbladder with no stones or sludge. A computed tomography (CT) scan of the abdomen showed a normal-sized pancreas with no evidence of pancreatitis. The patient was treated with intravenous fluids, pain management, and antiemetics. He was discharged on the third day of admission with a diagnosis of acute pancreatitis of unknown etiology. He was advised to follow up with his primary care physician and to avoid alcohol and fatty foods.
