## Hazards of vacuum

### 3.1 Ignorance of hazards of ambient pressure

The same concepts for pressure apply to vacuum. However, in vacuum systems the pressure is pushing inward, not outward.

The pressure comes from the atmosphere — we don't feel it but a tank does when you pull vacuum on it.

If a tank is not designed for vacuum, it will likely be damaged if placed under vacuum.

Storage tanks and railcars are particularly susceptible to damage, but it can also happen to process vessels that are only rated for low pressures or very large pipes.
