Education Economic Growth And Income Distribution:

Education and Its Relation to Economic Growth, Poverty, and Income Distribution Jandhyala B. G. Tilak, 1989

This paper presents an extensive survey of empirical research evidence on the role of education in economic growth poverty and income distribution The author presents new analysis of more recent cross nation data on education and income distribution The analysis uses lagged variables on education which reconfirms some of the well established theses on the role of education in improving income distribution It also indicates that with significant improvements in educational levels the threshold level of education to significantly contribute to income distribution could change from primary to secondary education The author also questions some of the doubts expressed by critics in this context and reasserts that on the whole education is an important policy instrument that can be looked upon with hope towards improving inequities

Economy of Education Mark Gradstein, M. Justman, Volker Meier, 2005 The dominant role played by the state in the financing regulation and provision of primary and secondary education reflects the widely held belief that education is necessary for personal and societal well being The economic organization of education depends on political as well as market mechanisms to resolve issues that arise because of contrasting views on such matters as income inequality social mobility and diversity This book provides the theoretical framework necessary for understanding the political economy of education the complex relationship of education economic growth and income distribution and for formulating effective policies to improve the financing and provision of education The relatively simple models developed illustrate the use of analytical tools for understanding central policy issues After offering a historical overview of the development of public education and a review of current econometric evidence on education growth and income distribution the authors lay the theoretical groundwork for the main body of analysis First they develop a basic static model of how political decisions determine education spending then they extend this model dynamically Applying this framework to a comparison of education financing under different regimes the authors explore fiscal decentralization individual choice between public and private schooling including the use of education vouchers to combine public financing of education with private provision and the social dimension of education its role in state building the traditional melting pot that promotes cohesion in a culturally diverse society

Growth Theo S. Eicher, Stephen J. Turnovsky, 2007-01-26 Even minute increases in a country's growth rate can result in dramatic changes in living standards over just one generation. The benefits of growth, however, may not be shared equally. Some may gain less than others and a fraction of the population may actually be disadvantaged. Recent economic research has found both positive and negative relationships between growth and inequality across nations. The questions raised by these results include: What is the impact on inequality of policies designed to foster growth? Does inequality by itself facilitate or detract from economic growth, and does it amplify or diminish policy effectiveness? This book provides a forum for economists to examine the theoretical, empirical, and policy issues involved in the relationship between growth and inequality. The aim is to develop a framework for determining the role of public policy in enhancing both growth and equality. The diverse range of topics examined in both developed and developing countries includes natural resources, taxation, fertility, redistribution, technological change, transition, labor markets, and education. A theme common to all the essays is the importance of education in reducing inequality and increasing growth.

Higher Education, Employment, and Economic Development in India Ram Kumar Mishra, Sandeep Kumar Kujur, K. Trivikram, 2023-05-23 This volume examines the role of higher education and employment in economic development in emerging economies like India. It looks at the contours of higher education policies and the labour market dynamics to explore ways to address joblessness and income disparity. The book discusses themes such as quality and access to higher education, the shift towards private investment in higher education, demographic dividend, and joblessness among youth, social and income inequalities, labour migration, and employment, and the participation of women in the workforce among others. It provides insights into the challenges relating to employment generation in the industrial sector. It also offers solutions and policy measures to move towards sustainable growth, better employment opportunities in various sectors of industries, and human development. Rich in empirical data, this volume will be of interest to students and researchers of education, economics, development studies, sociology, gender studies, and social and economic policy.

Economic Growth, Income Distribution and Poverty Reduction in Contemporary China Shujie Yao, 2004-11-10 China has experienced over a quarter century of rapid economic growth which has had a phenomenal impact on the global economy. Entering into the twenty-first century implies that China has begun a new phase of economic and social development. Yao reviews the economic development history of contemporary China from 1949 to the present, paying special attention to growth, inequality, and poverty reduction. A real Chinese economic miracle should have two important features: high income growth and a fair distribution system so that poverty can be eradicated.

Population Growth, Income Distribution, and Economic Development Nico Heerink, 2012-12-06 In this book, a model of long-term interrelationships between income distribution, population growth, and economic development is developed and estimated from data for 54 countries. The results indicate that a reduction of income inequality leads to lower fertility and mortality, to improved basic needs satisfaction, and to lower labour force participation of young and old males and of females in Asia and

Africa The effect of income distribution on saving and consumption is found to be negligible These outcomes suggest that family planning and health policies in LDCs will show better results when they are supplemented with policies aimed at making the poor benefit from economic growth As regards development policy the results indicate that a reduction of income inequality does not impair the formation of physical capital but enhances the formation of human capital and lowers the growth rate of the labour force

Inequality and Education Revisited Mr.David Coady,Allan Dizioli,2017-05-26 This paper presents new results on the relationship between education expansion and income inequality While human capital theory suggests that income inequality increases with inequality of education outcomes the expected relationship between income inequality and the level of education is ambiguous Consistent with these theoretical priors when dynamic panel estimation techniques are used to address issues of persistence and endogeneity we find a large positive statistically significant and stable relationship between education inequality and income inequality especially in emerging and developing economies and among older age cohorts The relationship between income inequality and education levels is positive but small and not always statistically significant but we find a statistically significant negative relationship with schooling levels of younger cohorts Statistical tests indicate that our dynamic estimators are consistent and that our identifying instruments are valid Policy simulations suggest that education expansion will continue to be inequality reducing but that this role will diminish as countries develop
