EC nomenclature

* each enzyme is classified by **EC number** (Enzyme Commission of IUBMB) – *6 classes*:

- EC 1.x.x.x oxidoreductases
- EC 2.x.x.x transferases
- EC 3.x.x.x hydrolases
- EC 4.x.x.x lyases
- EC 5.x.x.x isomerases
- EC 6.x.x.x ligases (synthetases)

Enzyme Nomenclature:

Enzyme Nomenclature 1992 International Union of Biochemistry and Molecular Biology. Nomenclature Committee, Edwin C. Webb, 1992-08-27 Offers general information on enzyme nomenclature provided by the Queen Mary and Westfield College Department of Chemistry in London England for the Nomenclature Committee of the International Union of Biochemistry and Molecular Biology NC IUBMB Lists recommended names for enzymes Enzyme Nomenclature 1978 Sam Stuart, 1979-01-01 Enzyme Nomenclature 1978 is based upon the recommendations of the Nomenclature Committee of the International Union of Biochemistry on the Nomenclature and Classification of Enzymes This book deals with the naming of enzymes The text describes problems encountered in the past when individual scientists named enzymes randomly resulting in duplication misnomers and confusion Some order followed upon the establishment of the International Commission on Enzymes This book also explains the classification and nomenclature scheme through general principles that should be followed in dealing with enzymes The text describes the systematic and trivial names the key to numbering of enzymes and the rules of classification and nomenclature The book also contains the enzyme list including the class of oxidoreductases transferases hydrolases lyases and ligases synthetases The appendix contains the nomenclature of electron transfer proteins which include flavoproteins proteins containing reducible disulfide cytochromes iron sulfur proteins and other metalloproteins An index lists all the enzymes in alphabetical order This handy reference will be useful for scientists involved in bio chemistry molecular biology micro biology and researchers whose works involve enzyme and medical research The Enzyme Reference Daniel L. Purich, R. Donald Allison, 2003-01-04 The aim of this work is to provide a fuller spectrum of information in a single source on enzyme catalyzed reactions than is currently available in any published reference work or as part of any Internet database The Enzyme Reference A Comprehensive Guidebook to Enzyme Nomenclature Reactions and Methods includes 20 000 review articles and seminal research papers Additionally it provides a novel treatment of so called ATPase and GTPase reactions to account for the noncovalent substratelike and productlike states of molecular motors elongation factors transporters DNA helicases G regulatory proteins and other energases Includes a compendium of over 6 000 enzyme reactions including enzyme commission numbers alternative names substrates products alternative substrates and properties Covers over 900 chemical structures of key metabolites and cofactors Index directs readers to the exact pages for over 9 500 enzyme names *Enzyme Nomenclature* International Union of Biochemistry and Molecular Biology. Nomenclature Committee, 1961 **Enzyme nomenclature 1978** Commission on Biochemical Commission on Biochemical Nomenclature, 2012-12-02 Enzyme Nomenclature 1978 is an attempt to address the problems and difficulties that arise in the naming of enzymes and coenzymes In this regard the International Union of Biochemistry established the International Commission on Enzymes with the task of creating a standard or code for the future naming of enzymes and to correct and organize the existing names and groups The text is divided to five chapters where the last two are references and index to the enzyme list

Chapter 1 establishes the premise of the text and explains the historical development of the commissions Chapter 2 meanwhile gives more details regarding the general principles of enzymes and their system of classification The rules for classification and nomenclature as well as the key to the numbering and classification of enzymes are also discussed Finally Chapter 3 lists all of the enzymes under several groups such as hydrolases and ligases The book will be a valuable source of reference not just for students but also for scientists and researchers in the field of biochemistry applied science and nutrition Enzyme nomenclature nineteen hundred and seventy-eight ,1979 Enzyme Nomenclature International

Enzyme Nomenclature International Union of Biochemistry. Nomenclature Committee,1978 Source Book of Enzymes John S. White,Dorothy C. White,1997-07-10 Enzymes which work as organic catalysts for chemical reactions are of interest to a wide range of scientific disciplines The Source Book of Enzymes provides a worldwide listing of commercially available enzymes offering the widest possible selection of enzyme products for specific applications The Source Book of Enzymes answers these important questions and many more Where can I find a particular enzyme What enzymes are available for purchase How do I select the appropriate enzyme for my application How do the available enzymes differ from one another What are the reaction conditions for optimum enzyme performance Who sells the enzyme I need The reliable research tool you will turn to again and again With the Source Book of Enzymes you will save hours of research time once wasted on searching through catalogs and product data bulletins This practical reference tool makes the selection process easy by providing systematic and comparative functional information about each enzyme Its global scope ensures that you will find the enzyme and supplier most suited to your needs and geographical location Students and educators researchers in academia industry and government bioengineers and biotechnologists and purchasing agents will find this an invaluable resource for conducting competitive assessments identifying new product trends and opportunities identifying enzyme properties and ordering specific enzymes *Enzyme Regulation in Metabolic Pathways* Lloyd Wolfenbarger, Jr.,2017-04-17 *Enzyme Regulation in Metabolic Pathways* shows the reader how to understand the roles of enzymes and their kinetic constants in intermediary metabolism It provides a means of correlating data obtained in experimental studies to multiple possible mechanisms through which some enzyme may catalyze the conversion of a substrate to a product Although not the most appropriate means of determining some potential kinetic mechanism quasi equilibrium assumptions are used throughout the book keeping the rate equation derivations simple Actual metabolic pathways with known presumed positive and negative regulation events are linked to these potential kinetic mechanisms using both rate equation derivations and data plots illustrating how the rate equation derivations can be used to explain the data plots This book will be a valuable

reference for students in biological sciences and biochemistry majors required to take a core course in enzymology
