management is the central clinical task of medical care Until the 1970s there was no generally accepted method of ensuring a scientific critical approach to clinical decision making And while traditional clinical authority was under attack there was increasing concern about the way in which doctors made decisions about patient care In this book Jeanne Daly traces the origins essential features and achievements of evidence based medicine and clinical epidemiology over the past few decades Drawing largely on interviews with key players she offers unique insights into the ways that practitioners of evidence based medicine set out to generate scientific knowledge about patient care and how in the process they reshaped the way medicine is practiced and administered *Environmental Epidemiology* Roberto Bertollini, Michael D. White,2012-12-06 My conviction is that the matters addressed in this volume are of transcendental importance if we are to face up to the challenges of the 1990s and beyond How for instance are we to cope with a truly ecological approach to public health and all its concomitant changes of risk groups worldwide unless there is a full appreciation of the population perspective throughout the health establishment The global village has achieved a measure of interdependence requiring recognition by all concerned with the health of both individuals and communities that there is an urgent need to share our knowledge and deploy our resources in the best interests of people everywhere The history of public health initiatives the origins of epidemiology and the tragic separation virtually a divorce of public health from medicine recounted in the chapters that follow argue strongly for an early rapprochement Health professionals who complement each other s knowledge and skills can be reunited through their common reliance on epidemiology as a major fundamental science for the entire health enterprise Henceforth epidemiology should be ranked in importance with cellular and molecular biology immunology and the social and systems sciences all are essential if we are to cope with the vast array of diseases and disorders that face us in both the developed and developing worlds We need more first rate laboratory scientists clinicians nurses aides village health work ers and managers committed to serving the public **Arteriosclerosis 1981** National Heart, Lung, and Blood Institute. Longitudinal Research F. Schulsinger,Sarnoff A. Mednick,J. Knop,2012-12-06 This volume is the product of a course on longitudinal prospective re search arranged by the three editors in Arhus Denmark in 1978 The course was supported by the

Nordisk Kulturfond for young researchers from the Nordic countries who had planned or had simply involved themselves in longitudinal prospective research projects of various kinds. The twenty six participants represented a wide range of professions: statisticians, psychologists, psychiatrists, nutritionists and public health researchers. The teachers came from many countries and represented many disciplines. The course was very successful especially from the point of view of the quality and investment of the teachers. We felt also that the course met a strong need in this relatively new field of research. Therefore we asked the teachers to prepare written versions of their lectures so that they could have wider dissemination; they agreed to do so. The present book is composed of these contributions. The first chapter after outlining some of the problems with traditional strategies in mental health research goes on to suggest some of the possible preventive applications of longitudinal research methods. Included in Parts II and III are papers on design problems and on the tools of long term research such as genetics and classification, biological measurements, epidemiological guidelines, statistical models, disease registers and developmental psychology.
