Epidemiology Of Arterial Blood Pressure:

Epidemiology of Arterial Blood Pressure H. Kesteloot, J.V. Joossens, 2012-12-06 Hypertension is a major health problem and contrary to ischemic heart disease which occurs only in Western countries its distribution is almost universal. It is this universality that has prompted us to gather in this book data on arterial blood pressure obtained in different parts of the world. Moreover, cerebrovascular mortality which is the commonest cause of death from hypertension is decreasing in most Western countries and in Japan and the reasons for this are still far from clear. A major problem in comparing blood pressure values from different centers is the standardization of the measurement. Complete standardization will never be achieved if one takes into account the numerous factors that may influence blood pressure in epidemiological studies. Whether blood pressures are measured by doctors or by technicians, are recorded at home in the working place or in a hospital, in sitting, standing or supine position, and is taken during the same examination, all of these, whether a blood sample, factors can influence blood pressure measurement. But meals, time of day, blood pressure being higher in the evening, heart rate, cuff size, stethoscope used, digit preference, month of year, temperature etc. can equally influence the measurement. Home reading of arterial blood pressure at standardized times is probably the best answer to all of these problems and has been used with gratifying results in a comparative study between Belgium and Korea. Current Bibliography of Epidemiology, 1975 Monthly with annual cumulations. Comprehensive current index to periodical medical literature intended for use of practitioners, investigators and other workers in community medicine who are concerned with the etiology, prevention and control of disease. Citations are derived from MEDLARS tapes for Index Medicus of corresponding date. Arrangement by 2 sections: i.e. Selected subject headings and Diseases, organisms, vaccines. No author index. **Cumulated Index Medicus**, 1966 Epidemiology of Chronic Disease: Global Perspectives Randall E. Harris, 2019-04-11 Epidemiology of Chronic Disease Global Perspectives is the most current and authoritative resource on the epidemiology, etiology, pathogenesis, risk factors and preventive factors of over 50 major chronic diseases and conditions. This comprehensive text provides readers with an excellent basis for examining current hypotheses regarding chronic disease epidemiology. *Lifelong Management of Hypertension* H. Mitchell Perry Jr., 2012-12-06 In the thirty years since the advent of effective pharmacologic treatment for hypertension, the world of the hypertensive has been transformed beyond recognition. The first change involved only malignant hypertensives with enough residual renal parenchyma to survive. Such a hypertensive could trade inevitable renal failure unless an intracerebral bleed occurred first for a rigid regimen which prevented his blood pressure from destroying him but which was associated with nearly intolerable side effects. Over the next 20 years, increasing numbers of patients with hypertension of decreasing severity were treated with drugs that had fewer and fewer side effects. In 1970, with the medical world finally ready to accept the concept, the well-known Veterans Administration Study demonstrated that morbidity and mortality could be diminished in moderately hypertensive patients by antihypertensive therapy that had minimal side effects.

As a result there has been a major attempt to bring everyone with elevated blood pressure under lifelong pharmacologic control. It is difficult however to know what levels of blood pressure deserve treatment many who when therapy first became available would not have even been considered hypertensive are now candidates for treatment. The lower the pressure the larger the potential population to be treated but the smaller the individual risk and hence the smaller the possible benefit. The point where decades of diminished quality of life from treatment begins to outweigh a possible late life complication is yet to be determined.

Coronary Heart Disease Epidemiology Michael Marmot, M. G. Marmot, Paul Elliott, 2005. Coronary heart disease is the leading cause of death worldwide affecting millions of people in both developed and developing countries. The dual aims of this book are to review the well established and emerging risk factors in coronary heart disease and to apply this knowledge to public health approaches to disease prevention. The book includes authoritative accounts of studies within a single population and international studies important areas of methodological development trials to test preventive strategies and the application of epidemiological and other knowledge to the development of public health policy for the prevention of widespread disease. It is an all encompassing work containing contributions from the world authorities in the field. The book is divided into four sections. The introduction reviews advances in the understanding of and the current status of risk factors for CHD. Section 2 looks at recent global trends and emerging patterns of CHD morbidity and mortality in several countries and includes chapters on work done under the auspices of WHO on the global burden of disease in relation to smoking and blood pressure. Section 3 focuses on advances in understanding the aetiology of CHD with each chapter focused on a particular risk factor. Section 4 explores measures of prevention and intervention in terms of public health policy with specific examples from around the world.

Ophthalmic Epidemiology Ching-Yu Cheng, Tien Yin Wong, 2022-05-24. *Ophthalmic Epidemiology: Current Concepts to Digital Strategies* provides a comprehensive guide to graduate students, ophthalmologists and researchers in ophthalmic epidemiology. It covers recently developed new methodologies, technologies and resources in ocular epidemiological research such as telemedicine, disease registries, EMR, bio banks and omics. This book also summarizes recent epidemiological findings and provides up to date data on ocular diseases. Furthermore, it introduces and discusses the uses of epidemiology in the evaluation of health services and population screening programs and reviews the application of epidemiology in intervention trials in the communities. Key Features: Comprehensive guide to the epidemiology of common eye diseases. Provides updates on the prevalence and risk factors of eye diseases. Outlines how epidemiological techniques can be utilized to evaluate ophthalmic health services and programs.
