Epistemology, Methodology, and the Social Sciences Robert S. Cohen, Marx W. Wartofsky, 2013-03-09 The last decades have seen major reformations in the philosophy and history of science What has been called post positivist philosophy of science has introduced radically new concerns with historical social and valuative components of scientific thought in the natural sciences and has raised up the demons of relativism subjectivism and sociologism to haunt the once calm precincts of objectivity and realism Though these disturbances intruded upon what had seemed to be the logically well ordered domain of the philosophy of the natural sciences they were no news to the social sciences There the messy business of human action volition decision the considerations of practical purposes and social values the role of ideology and the problem of rationality had long conspired to defeat logical reconstructionist programs The attempt to tarne the social sciences to the harness of a strict hypothetico deductive model of explanation failed Within the social sciences phenomenological Marxist hermeneuticist action theoretical approaches vied in attempting to capture the distinctiveness of human phenomena In fact the philosophy of the natural sciences even in its hard forms has itself become infected with the increasing reflection upon the role of such social scientific categories in the attempt to understand the nature of the scientific enterprise

methodology of social sciences identifying commonalities historic continuities and genuine differences *Teaching Research Methods in the Social Sciences* Mark Garner, Claire Wagner, Barbara Kawulich, 2016-04-01 How can excellence in the teaching of research methods be encouraged and ensured This question has become increasingly important following the adoption of research methodology as a core part of many postgraduate and undergraduate courses There has however been little discussion about the aims and methods of teaching the subject In this volume a number of authors from a variety of countries and disciplines employ their knowledge and experience towards the development of a pedagogical culture in research methods Their aim is to establish the extent of common concerns and challenges and to demonstrate ways in which these are being met Intended to provide both a stimulus and source materials for the development of a more substantial and systematic literature in the field the book will be of great interest to all those teaching research methods courses within social science disciplines *Linguistic Fuzzy Logic Methods in Social Sciences* Badredine Arfi, 2010-06-17 The book titled *Linguistic Fuzzy Logic Methods in Social Sciences* is a first in its kind Linguistic fuzzy logic theory deals with sets or categories whose boundaries are blurry or in other words fuzzy and which are expressed in a formalism that uses words to compute not numbers termed in engineering as soft computing This book presents an accessible introduction to this linguistic fuzzy logic methodology focusing on its applicability to social sciences Specifically this is the first book to propose an approach based on linguistic fuzzy logic and the method of computing with words to the analysis of decision making processes strategic interactions causality and data analysis in social sciences The project consists of systematic theoretical and practical discussions and developments of these new methods as well as their applications to various substantive issues of interest to international relations scholars political scientists and social scientists in general Epistemology and methodology in the social sciences: the case of statistical discipline ; The rise of demography as an autonomous science Robert A. Horváth, 1983 Epistemology & Methodology I: M. Bunge, 2012-12-06 In this Introduction we shall state the business of both descriptive and normative epistemology and shall locate them in the map of learning This must be done because epistemology has been pronounced dead and methodology nonexistent and because when acknowledged at all they are often misplaced 1 DESCRIPTIVE EPISTEMOLOGY The following problems are typical of classical epistemology i What can we know ii How do we know iii What if anything does the subject contribute to his knowledge iv What is truth v How can we recognize truth vi What is probable knowledge as opposed to certain knowledge vii Is there a priori knowledge and if so of what viii How are knowledge and action related ix How are knowledge and language related x What is the status of concepts and propositions In some guise or other all of these problems are still with us To be sure if construed as a demand for an inventory of knowledge the first problem is not a philosophical one any more than the question What is there But it is a genuine philosophical problem if construed thus What kinds of object are knowable and which ones are not However it is doubtful that philosophy can offer a correct answer to this problem without the help of science and technology For example

only these disciplines can tell us whether man can know not only phenomena appearances but also noumena things in themselves or self existing objects New Thinking in Complexity for the Social Sciences and Humanities Ton Jörg,2011-08-09 The underlying idea and motive for the book is that the notion of complexity may humanize the social sciences may conceive the complex human being as more human and turn reality as assumed in our doing social science into a more complex that is a richer reality for all The main focus of this book is on new thinking in complexity with complexity to be taken as derived from the Latin word complexus that which is interwoven The trans disciplinary approach advocated here will be trans disciplinary in two ways firstly by going beyond the separate disciplines within the fields of both natural sciences and social sciences and secondly by going beyond the separate cultures of the natural sciences and of the social sciences and humanities Research Methodology in Social Science Krishan Kumar Singh,2022-01-15 Research Methodology in Social Science Research Methodology in Social Sciences is of great importance in disciplines and interested people on searching various knowledge or solution to a phenomenon The main purpose of the book is to share scholarly knowledge about research and its complexity This book can be used to train the basics and techniques involved on doing inquiries from different views The experience shows that no single cure for all diseases So when comes to research there is no single research methodology or technique which fits all circum stances Hence the book tries to identify a family of approaches towards various research situations and distinguish their outcomes The Search for a Methodology of Social Science S. Turner,2013-03-09 Stephen Turner has explored the ongms of social science in this pioneering study of two nineteenth century themes the search for laws of human social behavior and the accumulation and analysis of the facts of such behavior through statistical inquiry The disputes were vigorously argued they were over questions of method criteria of explanation interpretations of probability understandings of causation as such and of historical causation in particular and time and again over the ways of using a natural science model From his careful elucidation of John Stuart Mill s proposals for the methodology of the social sciences on to his original analysis of the methodological claims and practices of Emile Durkheim and Max Weber Turner has beautifully traced the conflict between statistical sociology and a science offactual description on the one side and causal laws and a science of nomological explanation on the other We see the works of Comte and Quetelet the critical observations of Herschel Buckle Venn and Whewell and the tough scepticism of Pearson all of these as essential to the works of the classical founders of sociology With Durkheim s essay on Suicide and Weber s monograph on The Protestant Ethic Turner provides both philosophical analysis to demonstrate the continuing puzzles over cause and probability and also a perceptive and wry account of just how the puzzles of our late twentieth century are of a piece with theirs The terms are still familiar reasons vs **Epistemology & Methodology I:** Mario BUNGE,1983-08-31 In this Introduction we shall state the business of both descriptive and normative epistemology and shall locate them in the map oflearning This must be done because epistemology has been pronounced dead and methodology nonexistent and because

when acknowledged at all they are often misplaced 1 DESCRIPTIVE EPISTEMOLOGY The following problems are typical of classical epistemology i What can we know ii How do we know iii What if anything does the subject contribute to his knowledge iv What is truth v How can we recognize truth vi What is probable knowledge as opposed to certain knowledge vii Is there a priori knowledge and if so of what viii How are knowledge and action related ix How are knowledge and language related x What is the status of concepts and propositions In some guise or other all of these problems are still with us To be sure if construed as a demand for an inventory of knowledge the first problem is not a philosophical one any more than the question What is there But it is a genuine philosophical problem if construed thus What kinds of object are knowable and which ones are not However it is doubtful that philosophy can offer a correct answer to this problem without the help of science and technology For example only these disciplines can tell us whether man can know not only phenomena appearances but also noumena things in themselves or self existing objects Critical Rationalism, the Social Sciences and the Humanities I.C. Jarvie, N. Laor, 1994-12-31 An outstanding feature of this book is the broad range of the contributors drawn from Europe the Middle East and North America testifying both to the range of Professor Agassi's interests and the geographical spread of his influence Most contributors use Agassi's ideas as a springboard to engage in debate on issues or offer a contribution in an area that interests him In this volume contributors consider such questions as Agassi's philosophy of education in practice as well as in theory the impact of psychologism in philosophy the origins of critical rationalism in the Bible the debates in economics stimulated by the work of Popper and Agassi and many other topics Besides the special topics the reader gains some sense of the fruitfulness of critical rationalism in the hands of Agassi's friends and colleagues
