Erosion In The Sungei Gombak Catchment:

Developments and Applications of Geomorphology J. E. Costa, P. J. Fleisher, 2012-12-06 The last decade has seen a remarkable increase in the application of geomorphology for numerous projects and investigations Geomorphology is now viewed as an indispensable partner of engineering and geology in the world of applied science For a discipline with few independent theories of its own geomorphology has become a cosmopolitan science drawing on many topics from allied sciences To compile a list of successful and viable applications and contributions would be an arduous chore if not an impossible task Instead we have compiled a set of invited papers that represent some of the practical developments and uses of geomorphology over the past decade Such a compilation of papers will reflect our own backgrounds biases associations and personal and professional experiences We make no apologies for the topics omitted but recognize that this volume could be prohibitively large if all the subdivisions of geomorphology were equally and fully covered Our goal in assembling the papers for this volume was to emphasize the concepts principles and applications of geomorphology While techniques procedures and practical applications are stressed the reason for each investigation is as important as the method employed This book therefore represents the methods used and reasons for applying geomorphology Where case studies are used they serve as examples that can be applied in related situations similar settings and other locations The authors have successfully addressed this goal in a broad selection of chapter topics

Water and the Rainforest in Malaysian Borneo Ian Douglas, 2022-01-01 This volume synthesizes and analyzes thirty years of hydrological research in the Danum Valley Conservation Area a lowland dipterocarp rainforest in Sabah Malaysia Ian Douglas explores the role of water in the rainforest ecosystem setting out the ecological climatological and geological context of present day hydrological processes soil erosion and stream sedimentation He emphasizes the role of extreme events and natural disturbances in sediment supplies and the evolution of drainage pathways and explains the pathways of rainfall and stream sediment Douglas then explores the impacts caused by logging the extreme pulses of sedimentation and the effects of log removal and logging road construction examining the effects of major storms in the 20 years after tree harvesting Methods of minimizing logging damage to soils and streams are discussed and the effects on flora and fauna are considered

The Future of Tropical Rain Forests in South East Asia J. Davidson, John Michael Davidson, Tho Yow Pong, Maarten Bijleveld, 1985

Geomorphological Hazards in High Mountain Areas J. Kalvoda, C.L. Rosenfeld, 2012-12-06 On the basis of a total of thirteen case examples from the Tien Shan Karakorum Himalaya and Tangula Shan central Tibet the risk potential and hazards are inferred from the development of landscape during the Quaternary The history of glaciers can be seen as of central importance for this The Ice Age glacial erosion created V shaped valleys which with their steep flanks as a consequence of the interglacial formation of V valleys have prepared and brought about landslides as well as rockslides and the hazards combined with them The same is true for the moraines which the glaciers have deposited high up in the valley flanks and related loose stone deposits Dry and

wet mass movements follow after heavy precipitation especially in the semi arid investigation areas and are catastrophes for the settlements and the communication routes in the valley floors Their key forms are debris cones and debris slopes as well as mudflows and alluvial fans In addition to the Ice Age glaciation history as a preparatory indirect factor the Holocene to present glaciation history is as a result of the damming up of glacier and moraine lakes and their outbursts a direct risk factor The examples presented of acute and already occurred cases of damage were investigated in the years 1989 1994

River Discharge to the Coastal Ocean John D. Milliman, Katherine L. Farnsworth, 2013-03-28 Rivers provide the primary link between land and sea Utilizing the world's largest database this book presents a detailed analysis and synthesis of the processes affecting fluvial discharge of water sediment and dissolved solids It also discusses the ways in which climatic variation episodic events and anthropogenic activities past present and future affect the quantity and quality of river discharge The book contains more than 165 figures many in full color including global and regional maps An extensive appendix presents the 1534 river database as a series of 44 tables that provide quantitative data regarding the discharge of water sediment and dissolved solids The complete database is also presented within a GIS based package available online at www.cambridge.org/milliman Now available in paperback reprinted with corrections this is an invaluable resource for researchers professionals and graduate students in hydrology oceanography geology geomorphology and environmental policy

The Physical Geography of Southeast Asia Avijit Gupta, 2005-02-24 This will be the first comprehensive and detailed volume on the physical environment of Southeast Asia and will be essential reading for geographers ecologists and environmental managers As the definitive reference work on the region it will cover all aspects of the biophysical environment and its current environmental problems and management practices The topics discussed range from a regional view of landforms and vegetation to specific cases including urban environments coral reefs volcanic hazards and the Mekong River Basin The contributors are distinguished scholars and have a long association with Southeast Asia This is the fourth volume to be published in the Oxford Regional Environment series

Humid Tropical Environments Alison Reading, Andrew C. Millington, Russell D. Thompson, 1995-10-30 The humid tropics contain some of the world's richest most diverse most important and most threatened environments This book draws on recent work by geographers biologists ecologists geologists and climatologists to present a complete and integrated appraisal of the natural environment of all the humid tropical regions of the world The most complete textbook on this key subject Fully illustrated throughout with photographs and diagrams Informative case studies and examples Considers the physical environment as a whole and stresses the link between the elements

Erosion and Sediment Yield D. E. Walling, Bruce Webb, 1996

Changes And Disturbance In Tropical Rain Forest In South East Asia Tim H Clutton-brock, David M Newbery, G T Prance, 2000-09-27

Views on the dynamics of tropical forests are changing rapidly with the recognition that their environment is variable on the decadal to century scale. Fluctuating climatic conditions partly determine tropical forest structure, species composition and dynamics. Tropical communities are also highly contingent in space and time with respect to site and historical factors. Tropical forests have experienced to some degree this disturbance regime in the past but climatologists are now predicting increasingly frequent extreme events in the new century. The combination of increasing deforestation and land use conversion by man plus an increasingly variable environment means a situation that could be very difficult to manage.

Geomorphology Richard J. Chorley, Stanley A. Schumm, David E. Sugden, 2019-04-10. Originally published in 1984. This major text covers the whole discipline of geomorphology, presenting a clear and comprehensive overview of the field, drawing on the full range of modern research. Landforms and their formative processes are treated on a broad spectrum of spatial scales and examples are drawn from the major geological, climatic and biotic environments. The book is divided conveniently into some 170 clearly defined sections to allow readers to make the most efficient use of those parts of the text relevant to their particular needs. After introducing the basic concepts such as systems analysis, morphologic and cascading systems, the historical evolutionary approach and process response geomorphology, the book moves on to the geological background to geomorphology and then the extensive third part deals with the geomorphic processes and responding landforms. Part four examines climatic geomorphology and the appendix touches on applied geomorphology, especially fluvial processes.

Limnology of a Small Malayan River Sungai Gombak J. Bishop, 2012-12-06. Rivers are recognized as major natural resources not only as sources of domestic, industrial and agricultural water and hydro electric power but also for food production and increasingly for recreation and tourist promotion. This awareness has led to increased study of lotic limnology particularly with respect to the development of the potentials of river systems. The concern over deterioration of watercourses as a result of poor land utilization and their use as repositories for man's rejectamenta has stimulated research into the basic dynamics of the river environment and its biotic communities. Before any assessment of pollution effects can be made or rational remedial action suggested there must be a sound, detailed knowledge of the natural characteristics of regional water courses as a reference standard. This knowledge can result only from investigating the whole drainage area as a unit ecosystem. E VANS 1956 rather than just the specific conditions in the river itself. cf SLACK 1955, HYNES 1969. Biotic data for any stream are of little value if divorced from consideration of the geology, hydrochemistry, land use and nutrient cycles of the watershed that generated them. The study of large rivers, potamobiology in the sense of ILLIES 1955, 1961, is a specialized area of research merging into lotic ecology in many aspects and cannot be considered here.

Studies of Soil Erosion and Sedimentation in Tanzania Anders Rapp, Paul Temple, 1973. Regeneration of Selected Tropical Tree Species in Corcovado National Park, Costa Rica Stanley Robert Herwitz, 1981. **Land And Soil Management** Alfredo Sfeir-Younis, 2019-04-11. Soil erosion has become a problem of crisis proportions in developing countries around the globe.

and better approaches to land management are desperately needed This book provides analytical frameworks to guide the creation and appraisal of soil erosion control programs The authors discuss a broad range of important issues involved in designing and implementing more effective soil conservation programs The book begins with a discussion of the physical and economic dimensions of soil erosion and an estimation of the extent of the problem It then explains how to improve the evaluation of soil conservation programs by integrating scientific knowledge with economic methods and procedures A series of practical illustrations graphically demonstrates the application of the concepts derived from the theory The most important organizational institutional technical and macroeconomic aspects of soil and land management appraisal are outlined and the major elements of project or program design are also pinpointed and illustrated Finally the book suggests areas most in need of future research **Bulletin of the Geological Society of Malaysia** Geological Society of Malaysia,1968 Handbook of Urban Ecology ,2011 *Conservacion de Suelos Y Agua Para Prevenir Deficit de Alimentos* Idefonso Pla Sentis,1987
