**English Speech Rhythm** Elizabeth Couper-Kuhlen, 1993-01-01 This monograph reconsiders the question of speech isochrony the regular recurrence of stressed syllables in time from an empirical point of view It proposes a methodology for discovering isochrony auditorily in speech and for verifying it instrumentally in the acoustic laboratory In a small scale study of an English conversational extract the gestalt like rhythmic structures which isochrony creates are shown to have a hierarchical organization Then in a large scale study of a corpus of British and American radio phone in programs and family table conversations the function of speech rhythm at turn transitions is investigated It is argued that speech rhythm serves as a metric for the timing of turn transitions in casual English conversation The articular rhythmic configuration of a transition can be said to contextualize the next turn as generally speaking affiliative or disaffiliative with the prior turn The empirical investigation suggests that speech rhythm patterns at turn transitions in everyday English conversation are not random occurrences or the result of a social psychological adaptation process but are contextualization cues which figure systematically in the creation and interpretation of linguistic meaning in communication
