This book is about the interaction of laser radiation with various surfaces at variable parameters of radiation As a basic principle of classification we chose the energetic or intensity level of interaction of laser radiation with the surfaces These two characteristics of laser radiation are the most important parameters defining entire spectrum of the processes occurring on the surfaces during interaction with electromagnetic waves This is a first book containing a whole spectrum of the laser surface interactions distinguished by the ranges of used laser intensity It combines the surface response starting from extremely weak laser intensities 1 W cm^{-2} up to the relativistic intensities $10^{20} \text{ W cm}^{-2}$ and higher The book provides the basic information about lasers and acquaints the reader with both common applications of laser surface interactions laser related printers scanners barcode readers discs material processing military holography medicine etc and unusual uses of the processes on the surfaces under the action of lasers art conservation rangefinders and velocimeters space and earth explorations surface engineering and ablation and others The scientific applications of laser surfaces interactions surface optical nonlinearities surface enhanced Raman spectroscopy surface nanostructuring nanoripples and clusters formation X ray lasers and harmonic generation from the surfaces are discussed from the point of view of the close relations between the properties of surface and matter which is a cornerstone of most of studies of materials The novelty of the approach developed in *Laser Surface Interactions* is related with the interconnection of scientific studies with numerous applications of the laser surface interactions separated in different chapters by the ranges of laser intensities We present most recent achievements in this field The book provides valuable information for different ranges of reader s preparedness to the laser related topics from unprepared readers to students engineers and researchers professionals and academics **Ignition Devices for**
