Ecology The Experimental Analysis Of Distribution And Abundance Package:

Ecology Charles J. Krebs, 2009 Charles Krebs best selling majors level text approaches ecology as a series of problems that are best understood by evaluating empirical evidence through data analysis and application of quantitative reasoning No other text presents analytical quantitative and statistical ecological information in an equally accessible style for students Reflecting the way ecologists actually practice the new edition emphasizes the role of experiments in testing ecological ideas and discusses many contemporary and controversial problems related to distribution and abundance Ecology The Experimental Analysis of Distribution and Abundance Sixth Edition builds on a clear writing style historical perspective and emphasis on data analysis with an updated reorganized discussion of key topics and two new chapters on climate change and animal behavior Key concepts and key terms are now included at the beginning of each chapter to help students focus on what is most important within each chapter mathematical analyses are broken down step by step in a new feature called Working with the Data concepts are reinforced throughout the text with examples from the literature and end of chapter questions and problems emphasize application

view of modeling Provides authoritative insights into the latest in occupancy modeling Examines the latest methods in analyzing detection no detection data surveys Addresses critical issues of imperfect detectability and its effects on species occurrence estimation Discusses important study design considerations such as defining sample units sample size determination and optimal effort allocation

Spatial Analysis Marie-Josée Fortin, Mark R. T. Dale, 2005-04-21 The spatial and temporal dimensions of ecological phenomena have always been inherent in the conceptual framework of ecology but only recently have they been incorporated explicitly into ecological theory sampling design experimental design and models Statistical techniques for spatial analysis of ecological data are burgeoning and many ecologists are unfamiliar with what is available and how the techniques should be used correctly This book gives an overview of the wide range of spatial statistics available to analyse ecological data and provides advice and guidance for graduate students and practising researchers who are either about to embark on spatial analysis in ecological studies or who have started but are unsure how to proceed Only a basic understanding of statistics is assumed and many schematic illustrations are given to complement or replace mathematical technicalities making the book accessible to ecologists wishing to enter this important and fast growing field for the first time
