Ecology Of Arctic Environments:

Ecology of Arctic Environments Sarah J. Woodin, Mick Marquiss, 1997-08 Leading ecologists discuss the issues currently affecting the Arctic's environment in this important review. Early chapters provide a background to the soils and periglacial processes of the Arctic and to the role of microbial and plant communities in ecosystem function. The following chapters consider the relationship between individual arctic species and their environment particularly in the context of climate whilst a further chapter draws together terrestrial and aquatic ecosystems. The book concludes with chapters concentrating on man's impacts on the arctic environment.

Arctic and Alpine Environments Jack D. Ives, Roger G. Barry, 2019-10-08 Originally published in 1974 *Arctic and Alpine Environments* examines the relatively simple ecosystems of arctic and alpine lands that still occupy extensive areas little disturbed by modern technology. The book argues that there is a necessity for carefully controlled development of the resources of these regions and suggests that there is a risk of irreversible disturbance without full understanding of these regions. This book provides a detailed documentation of cold stressed arctic and alpine terrestrial environments and systematically deals with the present and past physical environment, climate, hydrology and glaciology, biota, treeline, vegetation, vertebrate zoology and historical biogeography, abiotic processes, geomorphological and pedological and the role of man, bioclimatology, archaeology and technological impact including radioecology. The book will appeal to academics and students of environmental and biological science as well as providing a significant source for conservationists, government agencies and industrial organizations.

The Arctic Jack D. Ives, Roger G. Barry, 2019-09-18 Originally published in 2000 *The Arctic* provides a comprehensive overview of the region's rapidly changing physical and human dimensions and demonstrates the importance of communication between natural scientists, social scientists and local stakeholders in response to the tremendous challenges and opportunities facing the Arctic. It is an essential resource for all Arctic researchers, particularly those developing multidisciplinary projects. It provides an overview of key areas of Arctic research by renowned specialists in the field and each chapter forms a detailed, varied and accessible account of current knowledge. Each author introduces the subject to a specialist readership while retaining intellectual integrity and relevance for specialists. Overall, the richness of the material presented in this volume reflects the ecological and cultural diversity of this vast and environmentally critical part of the globe.

Arctic Environment Variability in the Context of Global Change Leonid P. Bobylev, Kirill I. Kovlevich, Kondrat'ev, Ola M. Johannessen, 2003-12-16 The main focus of this book is the study of environmental dynamics in the Arctic coupled with ecosystem dynamics. Particular emphasis has been placed on problems of the composition of the Arctic atmosphere as well as changes in the composition due to human impacts. The book also analyzes observational data and numerical modeling results that characterize the Arctic basin pollution dynamics and its impact on ecosystems. Other topics covered include problems of general circulation in the atmosphere and oceans beginning with the 1930s when the Arctic was regarded as the kitchen of global weather and climate.

Whitton, 2012-07-05 Cyanobacteria have existed for 3.5 billion years yet they are still the most important photosynthetic organisms on the planet for cycling carbon and nitrogen The ecosystems where they have key roles range from the warmer oceans to many Antarctic sites They also include dense nuisance growths in nutrient rich lakes and nitrogen fixers which aid the fertility of rice fields and many soils especially the biological soil crusts of arid regions

Molecular biology has in recent years provided major advances in our understanding of cyanobacterial ecology. Perhaps for more than any other group of organisms it is possible to see how the ecology, physiology, biochemistry, ultrastructure and molecular biology interact. This all helps to deal with practical problems such as the control of nuisance blooms and the use of cyanobacterial inocula to manage semi desert soils. Large scale culture of several organisms, especially *Spirulina* and *Arthrospira* for health food and specialist products is increasingly being expanded for a much wider range of uses. In view of their probable contribution to past oil deposits much attention is currently focused on their potential as a source of biofuel. Please visit <http://extras.springer.com> to view Extra Materials belonging to this volume. This book complements the highly successful *Ecology of Cyanobacteria* and integrates the discoveries of the past twelve years with the older literature.

Nutrient Cycling in Terrestrial Ecosystems Petra Marschner, Zdenko Rengel, 2007-05-01

Nutrient Cycling in Terrestrial Ecosystems presents a comprehensive overview of nutrient cycling processes and their importance for plant growth and ecosystem sustainability. The first part of the book presents the fundamentals of nutrient cycling. Topics included are cycling of carbon, nitrogen, phosphorus, sulphur and micronutrients. Particular attention is paid to the role of root exudates and rhizosphere microorganisms in facilitating nutrient cycling. The second part discusses nutrient cycling at an ecosystem scale covering cropping systems, pastures, natural grasslands, arid lands, tundras and forests. The final chapter reviews current models of nutrient cycling. By comprehensively covering nutrient cycling at a range of scales and emphasising multidisciplinary approaches, this volume will support scientists and practitioners alike, providing links between those involved in improving sustainable economic output from managed ecosystems and those interested in conservation of natural ecosystems.
