Ecology Of Mediterranean Evergreen Oak Forests:

Ecology of Mediterranean Evergreen Oak Forests Ferran Rodà, 1999 Used by humans since ancient times evergreen oak forests still cover extensive mountain areas of the Mediterranean Basin These broadleaved evergreen forests occupy a transitional zone between the cool temperate deciduous forest biome and the drier Mediterranean pine forests and shrublands Slow growing and casting a deep shade the sclerophyllous holm oak *Quercus ilex* absolutely dominates the closed canopy of many Mediterranean evergreen oak forests This is a synthesis of 20 years of research on the structure function and dynamics of holm oak forests in two intensively studied experimental areas in Spain By combining observational measurements at the leaf tree plot and catchment scales with field experiments and modelling the authors explore how these forests cope with strong water limitation and repeated disturbances

Ecology of Mediterranean Evergreen Oak Forests Ferran Rodà, Javier Retana, Carlos A. Gracia, Juan Bellot, 2012-11-01 Broadleaved evergreen forests where holm oak *Quercus ilex* is almost the only canopy tree are a distinctive ecosystem of the Mediterranean Basin Biogeographically these forests lie between cool temperate deciduous forests to the north and drier shrublands to the south In a more general view they are ecologically intermediate between these deciduous forests and humid warm temperate evergreen forests such as the laurisilva of the Macaronesian islands or the broadleaved evergreen forests of eastern Asia Holm oak forests are characterized by small stature trees usually 5 to 12 m tall which are slow growing cast a deep shade and have small evergreen sclerophyllous leaves Summer drought is the major environmental constraint Mediterranean broadleaved evergreen forests have been underrepresented in the open literature For example The Woodlands Data Set of the International Biological Program IBP contained data from just one holm oak forest plot Le Rouquet in southern France Reichle 1981 Also some models of European forests consider just two major forest types broad leaved deciduous and evergreen conifers forgetting the extensive forests and woodlands of holm oak and cork oak *Quercus suber* which are the major evergreen oak tree species in the Mediterranean Basin The extensive literature on Mediterranean type ecosystems has also largely neglected these forests being centred mostly on Mediterranean type shrublands

chapter that reflects on the current state of knowledge and identifies some areas in need of further research

Mediterranean Oaks Network Simone Borelli, M. C. Varela, 2001 **Mediterranean Ecogeography** Harriett Allen, 2014-09-25 A core textbook series that aims to provide students with accessible up to date accounts of Ecogeography the marriage of ecology with geography in the primary terrestrial and marine environments This is the first book in the series on Mediterranean Ecogeography Biological diversity in the Mediterranean Basin is amongst the highest of any region on earth both in terms of total species numbers and endemism The flora is estimated at about 25 000 species of flowering plants and ferns compared with about 6000 species in non Mediterranean Europe About 50% of these are endemic Diversity amongst vertebrate animals is also high though endemism rates are lower than for plants The high levels of diversity contribute to and are a reflection of the considerable variability of landscape This results from a combination of factors including geological and tectonic history relief and physiography climate geomorphological processes hydrology soils the incidence of fires and impact of human activities The landscapes of the Mediterranean Basin are thus varied and fragmented a mosaic of ecosystems and communities Mediterranean Ecogeography aims to examine and explain this heterogeneity and the approach is focused on the ecogeography of the region Analysing the factors which account for the present distributions of plants and animals and the functioning of ecosystems within the Mediterranean Basin can help in the understanding of the relationship between people and natural ecosystems A key to the conservation of these ecosystems is the wise use of resources biological and physical In addition it is vital to assess how the natural environments of the region will respond to further change In the last twenty years understanding of the functioning of mediterranean type ecosystems has advanced through several international projects This book draws upon the findings of these and other research in the Mediterranean Basin to present a comprehensive text on a key region of the world and the problems and prospects of its environmental exploitation **Managing Forest Ecosystems: The Challenge of Climate Change** Felipe Bravo, Valerie LeMay, Robert Jandl, Klaus Gadow, 2008-05-20 Climate changes particularly warming trends have been recorded around the globe For many countries these changes in climate have become evident through insect epidemics e g Mountain Pine Beetle epidemic in Western Canada bark beetle in secondary spruce forests in Central Europe water shortages and intense forest fires in the Mediterranean countries e g 2005 droughts in Spain and unusual storm activities e g the 2004 South East Asia Tsunami Climate changes are expected to impact vegetation as manifested by changes in vegetation extent migration of species tree species composition growth rates and mortality The International Panel on Climate Change IPCC has included discussions on how forests may be impacted and how they may be used to mitigate the impacts of changes in climate to possibly slow the rate of change This book provides current scientific information on the biological and economical impacts of climate changes in forest environments as well as information on how forest management activities might mitigate these impacts particularly through carbon sequestration Case studies from a wide geographic range are presented This information is beneficial to

managers and researchers interested in climate change and impacts upon forest environments and economic activities This volume which forms part of Springer's book series Managing Forest Ecosystems presents state of the art research results, visions and theories as well as specific methods for sustainable forest management in changing climatic conditions

Phytophthora Infestations in Forest Ecosystems Bruno Scanu, Thomas Jung, 2021-06-02 The oomycete genus

Phytophthora represents one of the most notorious groups of tree pathogens in natural and semi natural forest ecosystems Since the discovery in the 1960s of the invasive *P. cinnamomi* threatening some of the world's richest plant communities in Australia numerous Phytophthora diseases have been reported on forest trees worldwide which were previously unknown to science The most notable examples include the oak and beech declines triggered by different Phytophthora spp in Europe and North America the findings of sudden oak death and sudden larch death caused by *P. ramorum* in the Western USA and the UK respectively and the association of *P. austrocedri* with mal del ciprés in Argentina and juniper decline in the UK All these epidemic events are driven by exotic invasive Phytophthora species introduced through infested nursery plants from their native overseas environments In recent years many independent surveys have studied the diversity of Phytophthora species and the diseases they are causing across a diverse range of forests and other natural ecosystems This Special Issue presents papers on Phytophthora surveys performed in different biogeographic regions and addresses the pathways and ecological and economic impacts of these invasive forest pathogens

Progress in Botany Karl Esser, Ulrich

Lüttge, Wolfram Beyschlag, Frank Hellwig, 2002-11-13 With one volume each year this series keeps scientists and advanced students informed of the latest developments and results in all areas of the plant sciences The present volume includes reviews on genetics cell biology physiology comparative morphology systematics ecology and vegetation science

Forests and Global Change David A. Coomes, David F. R. P. Burslem, William D. Simonson, 2014-02-20 Forests hold a significant proportion of global biodiversity and terrestrial carbon stocks and are at the forefront of human induced global change The dynamics and distribution of forest vegetation determines the habitat for other organisms and regulates the delivery of ecosystem services including carbon storage Presenting recent research across temperate and tropical ecosystems this volume synthesises the numerous ways that forests are responding to global change and includes perspectives on the role of forests in the global carbon and energy budgets historical patterns of forest change and diversification contemporary mechanisms of community assembly and implications of underlying drivers of global change and the ways in which forests supply ecosystem services that support human lives The chapters represent case studies drawn from the authors' expertise highlighting exciting new research and providing information that will be valuable to academics students researchers and practitioners with an interest in this field

Banded Vegetation Patterning in Arid and Semiarid Environments David

J. Tongway, Christian Valentin, Josiane Seghieri, 2012-12-06 Aerial photography has revealed the striking widespread phenomenon of repeating patterns of vegetation in more arid areas of the world Two interdependent phases bands of dense

and sparse vegetation alternate in the landscape This volume synthesizes half a century's accumulated knowledge of both theoretical and applied landscape functions from a variety of these regions It covers structure dynamics and methods of study as well as disturbances to these landscapes and relevant management issues Chapters are included to discuss the role of modeling in answering questions about the origins and complex processes of banded landscapes Studies of banded landscapes have yielded valuable lessons for understanding other semi arid landscapes as well leading to a knowledge base facilitating sustainable use and rehabilitation

Global Biodiversity in a Changing Environment F.Stuart Chapin,Osvaldo E. Sala,Elisabeth Huber-Sannwald,2013-12-01 The scientific community has voiced two general concerns about the future of the earth Climatologists and oceanographers have focused on the changes in our physical environment changes in the climate the oceans and the chemistry of the air we breathe Environmental biologists on the other hand have addressed issues of conservation and the extinction of species There is increasing evidence that these two broad concerns are intertwined and mutually dependent Past changes in biodiversity have both responded to and caused changes in Earth's environment In its discussions of ten key terrestrial biomes and freshwater ecosystems this volume uses our broad understanding of global environmental change to present the first comprehensive scenarios of biodiversity for the twenty first century Combining physical earth science with conservation biology Future Scenarios of Global Biodiversity provides a starting point for regional assessments on all scales The book will be of interest to those concerned with guiding research on the changing environment of the earth and with planning future policy especially in accordance with the Global Biodiversity Convention

Mickler, Richard A. Birdsey, John Hom, 2012-12-06 In the Global Change Research Act of 1990 global change is defined as changes in the global environment including alterations in climate land productivity oceans or other water resources atmospheric chemistry and ecological systems that may alter the capacity of the Earth to sustain life For the purposes of this book we interpret the definition of global change broadly to include physical and chemical environmental changes that are likely to affect the productivity and health of forest ecosystems over the long term Important environmental changes in the Northern United States include steadily increasing atmospheric carbon dioxide tropospheric ozone wet and dry deposition of nitrogen and sulfur compounds acidic precipitation and clouds and climate variability These environmental factors interact in complex ways to affect plant physiological functions and soil processes in the context of forest landscapes derived from centuries of intensive land use and natural disturbances Research in the North has begun to unravel some key questions about how environmental changes will impact the productivity and health of forest ecosystems species distributions and abundance and associations of people and forests Initial research sponsored by the USDA Forest Service under the United States Global Change Research Program USGCRP was focused on basic process level understanding of tree species and forest v VI Preface ecosystem responses to environmental stress Chemical pollution stresses received equal emphasis with climate change concerns **Fire Effects on Soils and Restoration Strategies** A Cerda, 2009-01-05 This book has been published a decade after *Fires Effects on Ecosystems* by DeBano Neary and Folliott 1998 and builds on their foundation to update knowledge on natural post fire processes and describe the use and effectiveness of various restoration strategies that may be applied when human intervention is warranted The chapters in this book **European Wood-pastures in Transition** Tibor Hartel, Tobias Plieninger, 2014-06-27 Wood pastures are important elements of European cultural identity and have an exceptional ecological value yet they are in decline all over Europe The structure of wood pastures is strongly influenced by grazing and multiple other land uses and by local and regional environmental conditions This book examines the diverse expressions of wood pastures across Europe It provides a new perspective using a social ecological framework to explore social and ecological values governing institutions threats and conservation approaches It explores the major drivers of decline which are shown to be related to accelerated cultural institutional and developmental changes occurring across Europe over the past century Case studies are included from North Western Southern and Eastern Europe Written by renowned scholars and conservationists the book contributes to developing better locally adapted conservation policies and management approaches for wood pastures *Water Management in Arid and Semi-arid Regions* Phoebe Koundouri, Katia Karousakis, 2006-01-01
