Chapter 6 in *Economics of Environmental Conservation* (Second Edition) (2005) by Clement A Tisdell. Published by Edward Elgar, Cheltenham, UK and Northampton, MA, USA. ISBN: 1 84376 614 0

### **6.1 Types of Property and General Consequences**

The nature of ownership of resources, that is the nature of ownership of property, can have important consequences for the conservation of resources and the economic efficiency with which resources are used, protected and developed. If wildlife is an open-access resource, a resource to which all have free access and if it is valuable for direct use, its existence can be threatened and paradoxically the more valuable it becomes the more likely is it to be brought to the brink of extinction by overharvesting. The property of all is frequently the concern of none and usually such property is not adequately protected and husbanded.

The nature of ownership of resources may take many forms. At one extreme, ownership may involve a single owner with the exclusive right to enjoy (or to exchange) any product flowing from that resource, to use up the stock of that resource and to assign the resource together with improvements (and the rights attaching to it) to others. This is an extreme case of private property. More complicated cases arise when a resource is jointly owned by a number of persons as in a partnership, co-operative or company and when the group has the same rights as mentioned above for a single owner. Joint ownership of resources can also occur in some local communities. These cases are complicated because we cannot assume that a group will act in the same way as an individual. The way in which a group can be expected to behave will depend on the size of the group, its articles of association and the nature of the organisation for conducting its business. Private rights, however, to use a resource may be restricted or use may not be entirely exclusive. The use of a property may be subject to conditions or covenants imposed by the state or by vendors or those assigning property, in some cases.

At the other extreme to pure private property is common-property to which all have access. In the open-access case, everyone is free to use the resource. Individuals or groups of individuals gain no property rights from conserving the resource or undertaking investment to increase its economic value or its productivity. Such property is sometimes described as *res nullius* - a thing belonging to no one.

This contrasts with *res communis*- a thing belonging to a community. In this case, access and use of the resource is regulated by the community. In our society, public parks might be considered to be *res communis* because the purposes for which they can be used are regulated. In

Resources in Education, 1989 Economics for Environmental Professionals Frank R. Spellman, 2015-04-13 Environmental professionals are often called upon to find solutions to environmental degradation problems or to lead the way in planning to prevent them Because they come mainly from the environmental and science disciplines most environmental professionals have limited training in the fundamentals of economics This book is designed to provide t Case Studies in Canadian Health Policy and Management, Second Edition Raisa B. Deber, Catherine L. Mah, 2014-04-30 Covering a wide range of issues the 22 cases included in Case Studies in Canadian Health Policy and Management constitute an exceptional resource for bringing real life policy questions into the classroom Based on actual events the cases have been developed with input from mid career professionals with strong field

experience and extensively tested in Raisa B Deber's graduate case study seminar at the University of Toronto. Each case features both a substantive health policy issue and a selection of key concepts and methods appropriate to examining public policy, public health, and health care management issues. In each case, the authors provide a summary of the case and the related policy issues, a description of events, suggested questions for discussion, supporting information, and both works cited and further reading. Suitable for graduate and undergraduate classrooms in programs in a variety of fields, *Case Studies in Canadian Health Policy and Management* is an exceptional educational resource. This second edition features all new cases as well as adding an introductory chapter that provides a framework and tools for health policy analysis in Canada.

*Managing without Growth, Second Edition* Peter A. Victor, 2018. Ten years after the publication of the first edition of this influential book, the evidence is even stronger that human economies are overwhelming the regenerative capacity of the planet. This book explains why long-term economic growth is infeasible and why, especially in advanced economies, it is also undesirable. Simulations based on real data show that managing without growth is a better alternative. **Peak Oil, Economic Growth, and Wildlife Conservation** J. Edward Gates, David L. Trauger, Brian Czech, 2014-11-20. The proposed book focuses on one of the most important issues affecting humankind in this century: Peak Oil, or the declining availability of abundant, cheap energy and its effects on our industrialized economy and wildlife conservation. Energy will be one of the defining issues of the 21st Century, directly affecting wildlife conservation wherever energy extraction is a primary economic activity and indirectly through deepening economic recessions. Since cheap, abundant energy has been at the core of our industrial society and has resulted in the technological advancements we enjoy today, the peak in world oil extraction would potentially have major impacts on civilization unless we prepare well in advance. One potential economic solution covered in the book would be a Steady State Economy with a stable population and per capita consumption, particularly in such industrialized countries as the United States. Furthermore, the lack of cheap, abundant energy directly and indirectly affects conservation efforts by professional societies and federal and state agencies and NGOs concerned with wildlife issues. We need to recognize these potential problems and prepare as much as possible for the consequences stemming from them.
