Economics Of Forestry And Rural Development An Empirical Introduction From Asia:

Economics of Forestry and Rural Development William F. Hyde, Gregory S. Amacher, 2000 An empirical overview of social forestry in Asia and how it relates to community development and household behavior *The Global Economics of Forestry* William F. Hyde, 2012-05-23 This book traces the economic and biological pattern of forest development from initial settlement and harvest activity at the natural forest frontier to modern industrial forest plantations It builds from diagrams describing three discrete stages of forest development and then discusses the management and policy implications associated with each supporting its observations with examples and data from six continents and from both developed and developing countries It shows that characteristic distinctions between the three stages make forestry unusual in natural resource management and that effective policy requires different even contrasting decisions at each stage William F Hyde s comprehensive discussion covers a wide range of issues including the impacts of both specific forest policies and broader macroeconomic policies the unique requirements of current issues such as global warming biodiversity and tourism and the complexities of the different forest products industries Concluding chapters review the roles of the newer institutional landowners of smaller private and farm landowners and of public agencies This highly original volume reaches far beyond forest economics it explains what forestry can do for regional development and environmental conservation and what policies designed for other sectors and the macro economy can do for forestry Forests in a Market Economy Erin O. Sills, Karen Lee Abt, 2013-04-17 This book draws together contributions from forest economists in the Research Triangle of North Carolina with co authors from institutions around the world It represents our common belief that rigorous empirical analysis in an economic framework can inform forest policy We intend the book as a guide to the empirical methods that we have found most useful for addressing both traditional and modern areas of concern in forest policy including timber production and markets multiple use forestry and valuation of non market benefits The book editors and most chapter authors are affiliated with three institutions in the Research Triangle the Southern Research Station of the USDA Forest Service K Abt Butry Holmes Mercer Moulton Prestemon Wear the Department of Forestry at North Carolina State University R Abt Ahn Cubbage Sills and the Environmental and Natural Resource Economics Program of Research Triangle Institute Murray Pattanayak Two other Triangle institutions are also represented among the book authors Duke University Kramer and the Forestland Group Zinkhan In addition to our primary affiliations many of us are adjunct faculty and or graduates of Triangle universities Many of our co authors also graduated from or were previously affiliated with Triangle institutions Thus the selection of topics methods and case studies reflects the work of this particular network of economists and to some degree our location in the southeastern United States However our work and the chapters encompass other regions of the United States and the world including Latin America and Asia Local Societies and Rural Development Shinichi Shigetomi, Ikuko Okamoto, 2014-07-31 The importance of community based and participatory approaches to rural development in developing

countries has long been emphasized Rural people who are economically and politically weak as individuals can only participate in development projects w

China's Forests William F. Hyde, Brian Belcher, Jintao Xu, 2015-09-16 Forestry and Forest Policy are key issues for the protection of China's natural environment and for its continued economic development Originally published in 2003 the contributors to this title review the successes of China's forest policies and the growth of its forests over the past quarter century and examine the challenges facing China's forests and rural environment China's Forests Global Lessons from Market Reforms is a valuable resource for students interested in environmental studies international forest policy and the modern development of China *Handbook of Forest Resource Economics* Shashi Kant, Janaki Alavalapati, 2014-04-03 It is increasingly recognized that the economic value of forests is not merely the production of timber Forests provide other key ecosystem services such as being sinks for greenhouse gases hotspots of biodiversity tourism and recreation They are also vitally important in preventing soil erosion and controlling water supplies as well as providing non timber forest products and supporting the livelihoods of many local people This handbook provides a detailed comprehensive and broad coverage of forest economics including traditional forest economics of timber production economics of environmental role of forests and recent developments in forest economics The chapters are grouped into six parts fundamental topics in forest resource economics economics of forest ecosystems economics of forests climate change and bioenergy economics of risk uncertainty and natural disturbances economics of forest property rights and certification and emerging issues and developments Written by leading environmental forest and natural resource economists the book represents a definitive reference volume for students of economics environment forestry and natural resource economics and management

New Vistas in Agroforestry P. K. Ramachandran Nair, M.R. Rao, L.E. Buck, 2013-03-09 It was in late 2002 that the idea of preparing a collection of multi authored chapters on different aspects of agroforestry as a compendium for the 1 World Congress of Agroforestry June 2004 was tossed around With the approval of the idea by the Congress Organizing Committee serious efforts to make it a reality got under way in early 2003 The rigorously peer reviewed and edited manuscripts were submitted to the publisher in December 2003 Considering the many different individuals involved in the task as authors and manuscript reviewers we feel quite pleased that the task could be accomplished within this timeframe We are pleased also about the contents on several counts First of all the tropical temperate mix of topics is a rare feature of a publication of this nature In spite of the scientific commonalities between tropical and temperate practices of agroforestry the differences between them are so enormous that it is often impossible to mesh them together in one publication Secondly several of the chapters are on topics that have not been discussed or described much in agroforestry literature A third feature is that some of the authors though well known in their own disciplinary areas are somewhat new to agroforestry the perceptions and outlooks of these scholars who are relatively uninfluenced by the past happenings in agroforestry gives a whole new dimension to agroforestry and broadens the scope of the subject Finally

rather than just reviewing and summarizing past work most chapters take the extra effort in attempting to outline the next steps

Environment and Development Economics, 2004 Policy Instruments for Environmental and Natural Resource Management Thomas Sterner, 2010-09-30 As Thomas Sterner points out the economic toolkit for dealing with environmental problems has become formidable It includes taxes charges permits deposit refund systems labeling and other information disclosure mechanisms Though not all these devices are widely used empirical application has started within some sectors and we are beginning to see the first systematic efforts at an advanced policy design that takes due account of market based incentives Sterner's book encourages more widespread and careful use of economic policy instruments Intended primarily for application in developing and transitional countries the book compares the accumulated experiences of the use of economic policy instruments in the U S and Europe as well as in select rich and poor countries in Asia Africa and Latin America Ambitious in scope the book discusses the design of instruments that can be employed in a wide range of contexts including transportation industrial pollution water pricing waste fisheries forests and agriculture Policy Instruments for Environmental and Natural Resource Management is deeply rooted in economics but also informed by perspectives drawn from political legal ecological and psychological research Sterner notes that in addition to meeting requirements for efficiency the selection and design of policy instruments must satisfy criteria involving equity and political acceptability He is careful to distinguish between the well designed plans of policymakers and the resulting behavior of society A copublication of Resources for the Future the World Bank and the Swedish International Development Cooperation Agency Sida

Forests and Human Health Carol J. Pierce Colfer, Douglas Sheil, Misa Kishi, 2006-01-01 This study has two central concerns the state of human health in forests and the causal links between forests and human health Within this framework we consider four issues related to tropical forests and human health First we discuss forest foods emphasizing the forest as a food producing habitat human dependence on forest foods the nutritional contributions of such foods and nutrition related problems that affect forest peoples Our second topic is disease and other health problems In addition to the major problems HIV AIDS malaria Ebola and mercury poisoning we address some 20 other tropical diseases and health problems related to forests The third topic is medicinal products We review the biophysical properties of medicinal species and consider related indigenous knowledge human uses of medicinal forest products the serious threats to forest sustainability and the roles of traditional healers with a discussion of the benefits of forest medicines and conflicts over their distribution Our fourth and final topic is the cultural interpretations of human health found among forest peoples including holistic world views that impinge on health and indigenous knowledge The Occasional Paper concludes with some observations about the current state of our knowledge its utility and shortcomings and our suggestions for future research Journal of Economic Literature, 2001 **Annual Research Report** University of Florida.
