**Stressors in the Marine Environment** Martin Solan, Nia M. Whiteley, 2016 A multitude of direct and indirect human influences have significantly altered the environmental conditions composition and diversity of marine communities However understanding and predicting the combined impacts of single and multiple stressors is particularly challenging because observed ecological feedbacks are underpinned by a number of physiological and behavioural responses that reflect stressor type severity and timing Furthermore integration between the traditional domains of physiology and ecology tends to be fragmented and focused towards the effects of a specific stressor or set of circumstances This novel volume summarises the latest research in the physiological and ecological responses of marine species to a comprehensive range of marine stressors including chemical and noise pollution ocean acidification hypoxia UV radiation thermal and salinity stress before providing a perspective on future outcomes for some of the most pressing environmental issues facing society today

**Stressors in the Marine Environment** synthesises the combined expertise of a range of international researchers providing a truly interdisciplinary and accessible summary of the field It is essential reading for graduate students as well as professional researchers in environmental physiology ecology marine biology conservation biology and marine resource management It will also be of particular relevance and use to the

regulatory agencies and authorities tasked with managing the marine environment including social scientists and environmental economists

**Contaminants of Emerging Concern in the Marine Environment** Victor M.

Leon, Juan Bellas, 2023-03-13 Contaminants of emerging concern in the marine environment current challenges in marine pollution reviews the available data in relation to contaminants of emerging concern CECs in the marine environment main sources transport pathways distribution in seawater and sediments bioaccumulation and biological effects Each chapter recaps the most relevant information about the main groups of CECs describing the particularities and specificities of each group and focusing on the most relevant individual contaminants CECs are not regulated substances and therefore not considered in national and international monitoring programs even though they may have a potential impact on the environment due to their continuous input relative persistence and or toxicity CECs are relevant not only in continental and coastal areas close to their main sources but also in the open sea because some of them are likely to be transported long distances through air deposition or absorbed into particulate material The persistence of many degradable substances in the marine environment increases when they are absorbed into particulate material sediments and or when they are subjected to anaerobic conditions that slow down the degradation kinetic of many contaminants Bioaccumulation of several CECs has been confirmed in different coastal organisms however in general the information available species and trophic levels considered is very limited because most studies are mainly focused on specific coastal areas This book offers useful information about not regulated contaminants that are not considered in international monitoring programs but have potential impacts in coastal and open sea areas Therefore reading the book will allow them to improve their view about the real impact of current use contaminants in the marine environment Presents a comprehensive view of the most relevant groups of CECs Includes an overview of each group of CECs including uses properties analysis distribution bioaccumulation and effects Provides information on all environmental compartments and marine areas coast continental shelf and open sea

**Persistent Pollutants in Marine Ecosystems** Colin H. Walker, D.R. Livingstone, 2013-10-22 This new volume from the SETAC Society of Environmental Toxicology and Chemistry Special Publications Series examines the phenomenon of persistent pollutants in the seas and oceans Unlike the highly visible and obvious effects caused by oil certain chemicals have unseen but long term and far reaching effects on the marine ecosystem They often have long half lives are carried great distances and pass easily through the food chain from prey to predator The behaviour and effects of these persistent pollutants on each type of marine animal invertebrates vertebrates fish mammals and fish eating birds are described A final overview draws the observations and conclusions together presenting a work that provides a foundation for understanding the behaviour of persistent pollutants in the marine environment

**Principles of Ecotoxicology** C.H. Walker, R.M. Sibly, D.B. Peakall, 2016-04-19 Cutting across traditional subject boundaries Principles of Ecotoxicology Fourth Edition gives readers an integrated view of ecotoxicology from molecules to ecosystems This new edition of a bestselling textbook continues to emphasize principles rather than practice providing the interdisciplinary perspective and grounding required for research
