administrative legislation and the definition of carbon emissions entitlements practical effect of China's climate change policy at the national provincial and local levels effectiveness of China's implementation of its international obligations lessons learned from schemes implemented in the United States and Australia comparison of China's seven regional pilot emissions trading scheme ETS programmes with the well established EU ETS linkage between China's ETS and other ETSs from a global perspective and future direction of an emerging carbon market in China The analysis assesses the critical costs and benefits of each approach in the context of selected case studies taking legal literature in the field fully into account Given that the Chinese government is taking steps to reduce emissions by altering energy production and usage and is signalling a willingness to make similar commitments in a multilateral treaty it is very timely and important for lawmakers and scholars within and outside China to think about new and appropriate regulatory measures to respond to the crisis and plan for a sustainable future This study provides not only a useful benchmark for both China and other countries in formulating initiatives on enhancing climate protection but also details the global implications for governments and for international organizations concerned with the understanding between China and the rest of the world in the context of climate change mitigation

the theoretical level but also for policy makers interested in improving the effectiveness of emission trading schemes From the foreword by Michael Faure This unique and up to date book analyses the functioning of the European Emissions Trading Scheme ETS and assesses the extent to which relevant legislation has affected its capacity to promote cost effective reduction of European carbon emissions The author investigates whether inefficiency has been caused by both the ETS cap setting procedure and by the ETS relevant allocation rule as defined by Directive 2003 87 EC He then considers whether the new Directive 2009 29 EC which reforms the ETS institutional design is likely to improve the scheme s effectiveness by reducing the risk of carbon leakage which could potentially be a consequence of implementing a unilateral policy across the asymmetric political landscape of Europe This well documented book will appeal to researchers and postgraduate students in environmental law and environmental economics as well as policymakers within environment industry and economics and electric and industrial operators and stakeholders Environmental NGOs energy and environmental consulting groups members of the European Commission and energy and environmental think tanks will also find much to interest them in this insightful book **Encyclopedia of Global Warming and Climate Change, Second Edition** S.
