Economic Models Of Climate Change A Critique:

Economic Models of Climate Change S. DeCanio, 2003-08-19 The climate policy debate has been dominated by economic estimates of the costs of policies to reduce greenhouse gas emissions Yet the models used to derive those estimates are based on assumptions that have largely gone untested The conventional approach embodies structural features that rule out alternative market outcomes In addition the distribution of climate rights is crucial to determining the economic affects of various policies Bringing these considerations to the forefront shows how domestic and international policy solutions might be found

Routledge Handbook of the Economics of Climate Change Adaptation Anil Markandya, Ibon Galarraga, Elisa Sainz de Murieta, 2014-01-03. Climate change is one of the greatest challenges facing human kind owing to the great uncertainty regarding future impacts which affect all regions and many ecosystems. Many publications deal with economic issues relating to mitigation policies but the economics of adaptation to climate change has received comparatively little attention. However this area is critical and a central pillar of any adaptation strategy or plan and is the economic dimension which therefore merits the increase in attention it is receiving. This book deals with the difficulties that face the economics of adaptation. Critical issues include uncertainty, baselines, reversibility, flexibility and adaptive management, distributional impacts, discount rates and time horizons, mixing monetary and non monetary evaluations and limits to the use of cost benefit analysis, economy wide impacts and cross sectoral linkages. All of these are addressed in the book from the perspective of economics of adaptation. Other dimensions of adaptation are also included such as the role of low and middle income countries, technology and the impacts of extreme events. This timely book will prove essential reading for international researchers and policy makers in the fields of natural resources, environmental economics and climate change.

Economic Analysis of Land Use in Global Climate Change Policy Thomas W. Hertel, Steven K. Rose, Richard S. J. Tol, 2009-05-07. Land has long been overlooked in economics. That is now changing. A substantial part of the solution to the climate crisis may lie in growing crops for fuel and using trees for storing carbon. This book investigates the potential of these options to reduce greenhouse gas emissions, estimates the costs to the economy and analyses the trade offs with growing food. The first part presents new databases that are necessary to underpin policy relevant research in the field of climate change while describing and critically assessing the underlying data, the methodologies used and the first applications. Together the new data and the extended models allow for a thorough and comprehensive analysis of a land use and climate policy. This book outlines key empirical and analytical issues associated with modelling land use and land use change in the context of global climate change policy. It places special emphasis on the economy wide competition for land and other resources especially the implications of changes in land use for the cost of climate change mitigation. Land use change as a result of mitigation and feedback from changes in the global climate to land use. By offering synthesis and evaluation of a variety of different approaches to this challenging field of research, this book

will serve as a key reference for future work in the economic analysis of land use and climate change policy
