Economics Of Salmon Aquaculture:

The Economics of Salmon Aquaculture Frank Asche, Trond Bjørndal, 2011-05-06 First published in 1990 The Economics of Salmon Aquaculture was the first book to systematically analyse the salmon aquaculture industry from both a market and production perspective Since publication of the first edition of this book the salmon aquaculture industry has grown at a phenomenal rate with salmon now being consumed in more than 100 countries worldwide This second edition of a very popular and successful book brings the reader right up to date with all the major current issues pertaining to salmon aquaculture Commencing with an overview of the production process in aquaculture the following chapters provide in depth coverage of the sources of the world's supply of salmon the growth in productivity technological changes environmental issues markets market structure and competitiveness lessons that can be learnt from the culture of other species optimal harvesting techniques production planning and investment in salmon farms Written by Frank Asche and Trond Bjørndal two of the world's leading experts in the economics of aquaculture this second edition of *The Economics of Salmon Aquaculture* provides the salmon aquaculture industry with an essential reference work including a wealth of commercially important information This book is also a valuable resource for upper level students and professionals in aquaculture and economics and libraries in all universities and research establishments where these subjects are studied and taught should have copies of this important book on their shelves

The Economics of Salmon Aquaculture Trond Bjørndal, 1990 Salmon aquaculture is growing at an enormous rate in countries such as Norway Scotland Ireland Japan Canada and Chile with the development spreading to other areas including Australia New Zealand and the United States Yet little systematic data and economic analyses are available with respect to the impact this development has on world salmon markets and the economic viability of the industry This book has been written to satisfy the need for a text on the economics of salmon aquaculture It describes salmon aquaculture production and analyses its impact on salmon markets Economic theory is adapted to the particularities of intensive aquaculture and appropriate management models are developed and applied to salmon aquaculture

An Analysis of the Management and Economics of Salmon Aquaculture, 2002 Salmon aquaculture can be a potential solution to bridge the gap between declining capture fisheries and increasing seafood demand However the environmental impacts it creates have generated criticism The overall objectives of this dissertation are to examine the economic consequences of environmental issues associated with salmon aquaculture and to explore policy implications and recommendations for reducing environmental impacts These objectives are addressed in five main analyses The growth of salmon aquaculture is analyzed based on farmed salmon production in the four leading producing countries and the sector as a whole Analyses indicate that salmon aquaculture is unlikely to continue to grow at its current pace A joint production function approach is used to estimate pollution abatement costs for the salmon aquaculture industry Results reveal that pollution abatement costs vary among observations and models On average pollution abatement cost is estimated at 3.5% in terms of total farmed

salmon production and 6.5% in terms of total revenue of farmed salmon. The ecological and economic impacts of sea lice from salmon farms on wild salmon population and fisheries are also studied. Analyses suggest that these effects are minor when the sea lice induced mortality rate is below 20% while they can be severe if the mortality is greater than 30%. Sea lice have greater ecological and economic impacts on pink salmon than on chum salmon. These effects are greater under a fixed exploitation rate than under a target escapement policy. The economic performance of open netcage and sea bag production systems for salmon aquaculture is compared. Netcage systems appear to be more economically profitable than sea bag systems when environmental costs are either not or only partially included. Sea bag systems can be financially profitable only when the salmon they produce can achieve a price premium. Finally, policy implications are explored and recommendations are made.

Salmon S. Shaw, J.F. Muir, 2012-12-06 with the issues involved in the management of salmon fishing, farming and ranching and the implications for production costs and the availability of supplies. Chapters 6 and 7 investigate processing, marketing and distribution and Chapter 8 discusses the workings of salmon markets and the main factors affecting the demand for salmon. Finally, chapter 9 summarises the main findings of the study and considers the issues likely to define the future of the industry. The main interest of the book is in salmon sold commercially and mention is only made in passing of the rather different though important issues involved in the management of sport or recreation fisheries. This book does not cover all species of salmon but concentrates on the main species of current commercial significance. These are the five commercially important species of Pacific salmon, all of which belong to the single separate genus *Oncorhynchus* together with *Salmo salar*, the Atlantic salmon. The related *Salmo gairdneri* rainbow trout and *Salmo trutta* brown trout/sea trout are outside the scope of the book although since these compete closely with salmon, the relationship is discussed.

1.2 THE SALMON LIFE CYCLE AND SPECIES The family salmonidae is indigenous to the Northern Hemisphere and is found from the temperate zone northwards to beyond the Arctic Circle in both Pacific and Atlantic waters. They are not native to the Southern Hemisphere but have been successfully introduced into New Zealand, into Argentina, Venezuela and more recently Chile and the Kerguelen Islands.

The Economics of Salmon Aquaculture Bruno Augusto Amato, 2016-11-30. Currently 70% of the salmon consumed in the world comes from aquaculture, the main producers being Norway, Chile and Canada and represents the third largest economy in aquaculture. This book provides an introduction to the economics of salmon aquaculture.

Aquaculture Upton Hatch, 2021-11-28. Presenting state of the art research on the economics of producing and marketing aquacultural products, this volume addresses critical issues concerning profitability, market acceptance and economic modeling of various aquacultural products. Research approaches range from firm level bioeconomic modelling to market level econometric modelling of industry growth and product substitution. The studies highlight the institutional structures and public policy issues that will shape growth and development of aquaculture into the twenty first century including trade policies, food safety and environmental quality.

Economics Ann Townsend Young,1993 **Economics of Aquaculture Diversification in Indian Sundarban** Jaydev Misra,2018-01-01 Indian Sundarban is blessed with adequate diversity of Small Indigenous Fish Species SIFS It is usually believed that integration of those species in the form of commercial culture along with present carp based production system can increase the overall efficiency of aquaculture production on the one hand as well as can provide food and nutritional security to the poor fish farmers on the other But despite all efforts and enormous potentials the production level and productivity are still not adequate to meet the large gap between potential and actual yields of fish In the present book attempts have been made to locate the efforts of aquaculture diversification and its effect on efficiency of overall fish production in Sundarban on more secure foundation of data and methodology In this study based on primary survey attempts have been made to examine the structural and operational features of diversified aquaculture practices and to identify the factors which impede the development of fisheries in Indian Sundarbans **Handbook of Production Economics** Subhash C. Salmon Aquaculture Knut Heen,Robert L. Monahan,Fred Utter,1993-12-14 A comprehensive guide to the responsible development of salmon aquaculture to the mutual benefits of all resources and individuals affected by this industry Geographic distribution approaches to problems of rearing in open and closed marine systems techniques dealing with transportation and feeding consequences of environmental factors on aquaculture and regulations and economic considerations are among the issues discussed **World Fish Farming: Cultivation and Economics** E. Brown,2012-12-06 Until the First Edition of World Fish Farming Cultivation and Econom ics was published several years ago there was little or no economic and technical information on commercial aquaculture either by countries or by species I tried at that time to partially fill the gap in the literature In this Second Edition I have updated data originally presented and increased the scope by adding new countries New trout data have been added for 10 western European countries sections on cost of production of food sized catfish and fingerlings in the USA new and improved chapters for Japan Hungary Indonesia the Philippines and the United Kingdom and com pletely new chapters pertaining to Poland Thailand and Czechoslovakia have all been added to this edition The book now includes 31 countries including all major producing ones Between 5 5 and 6 0 million metric tons of finfish shrimp and crayfish cultured production are represented which accounts for about 909c of the world s total The People s Republic of China and the USSR as well as countries on the continents of Europe Asia North America and Oceania are represented Because of only minimal reported cultured fish production in Africa and South America these continents have been omitted Also according to information received from New Zealand there is no culturing offish in that country other than for restocking of public waters More than 100 species of cultured fish seven species of shrimp and prawns and six species of crayfish are discussed MARKET INTEGRATION BETWEEN WILD AND FARMED FISH IN MEDITERRANEAN COUNTRIES Food and Agriculture Organization of the United Nations,2018-11-08 Market integration occurs when prices among different locations or related goods follow similar patterns over time Current knowledge on market integration

between aquaculture and wild caught fish is based on a small number of species and markets Most studies show the existence of market integration between wild and farmed conspecifics However there are some ambiguous results for European seabass and gilthead seabream in southern European countries in the literature In this study we investigate the existence of market integration between wild and farmed conspecifics for European seabass and gilthead seabream as well as several other key species in southern European countries *Economics of Ocean Ranching* Ragnar Arnason, Food and Agriculture Organization of the United Nations, 2001-01-01 The distinguishing characteristic of ocean ranching as compared to ocean fish farming is that the released species are unassisted once released into the ocean The document considers the experiences in ocean ranching in Japan the United States and Iceland up to the mid 1990s and discusses methodologies for assessing costs and benefits
