Cost_Benefit Analysis and Distributional Preferences Helen Scarborough,Jeff Bennett,2012-01-01 Helen Scarborough and Jeff Bennett have produced a work that is genuinely path breaking As is often the case with path breaking work the idea is simple enough if people can respond to choice experiments in ways that tell us a lot about what they value and how much they value it why would they not be able to respond to choice experiments where the options offered have different distributional consequences Such simple ideas evade implementation not because they are so hard to think up but because it is so easy to dismiss them as unthinkable All credit goes to Scarborough and Bennett for busting through this particular unthinkability barrier The authors may be surprised by the magnitude and the nature of the impact this work eventually enjoys From the foreword by Alan Randall The University of Sydney Australia and The Ohio State University US This pathbreaking study illustrates and enhances the potential of costbenefit analysis as a tool for decision making Advancing the incorporation of equity preferences in policy analysis the authors demonstrate the application of choice modelling to the estimation of distributional weights suitable for inclusion in a costbenefit analytical framework A platform for discussion of the challenges and opportunities of this approach is presented in the form of a detailed case study designed to estimate community preferences for different intergenerational distributions While the case study is focused on natural resource management and environmental policy the conceptual and methodological advances illustrated by the authors are relevant and applicable to a wider array of policy deliberations This book will prove a challenging and thought provoking read for academics students and policymakers with an interest in environmental issues and or public sector economics The Politics of Globalisation and Polarisation Maurice Mullard,2004-01-01 This book deals with the nature of contemporary globalisation Maurice Mullard aims to show that globalisation is not an inescapable unstoppable process somehow beyond human control rather that it represents and is being shaped by a series of deliberate policy choices and policy decisions The emphasis of this fascinating work is on how these policy choices are creating new forms of economic inequalities and also political elites that distort the democratic process **Cost-Benefit Analysis** Euston Quah,Raymond Toh,2011-10-20 Cost benefit analysis CBA is the systematic and analytical process of comparing benefits and costs in evaluating the desirability of a project or programme often of a social nature and for society as a whole CBA is fundamental to government decision making and can be an effective tool for informed decisions on the use of society s scarce resources This book highlights the main concepts and principles of cost benefit analysis used in real life cases and actual applications The book contains rich cases materials and examples of real life CBA applications with emphasis both on physical and non physical projects and infrastructure developments in Asia and beyond The book also discusses techniques frequently used in applied CBA The first part of the book introduces the key concepts and principles of CBA before Part Two covers some pertinent issues relating to CBA such as the recent trend of using behavioural economics and frequently used techniques in applied CBA Finally in Part

Three case studies are written up to illustrate how CBA is done and questions for the readers and students to ponder are raised at the end of each chapter The scope of the case studies is more than just physical infrastructures but will include public sector policies and programmes covering a host of social policies as in health education social welfare programmes and the environment For each case there will be illustrations of the key concepts and principles of CBA used Undertakings analyzed include the Three Gorges Dam in China the 2008 Beijing Olympics the Costs of Global Warming the Jamuna Bridge in Bangladesh The case studies many of which have taken or are to take place in developing countries provide a rich background to the principles of the method and are accompanied by a wealth of explanatory material As well as being suitable for courses in Cost Benefit Analysis Public Finance Environmental and Health Economics the book should be of interest to all public policy decision makers and planners

Environmentalism for a New Millennium Leslie Paul Thiele,1999 The vast majority of people in the industrialized world consider themselves environmentalists Yet environmental problems continue to worsen While the environmental movement is winning the battle for the hearts and minds of citizens in the United States and across the globe it may be losing the war to preserve the health of the planet and its biological diversity The reasons become clear in this book

Leslie Paul Thiele provides a much needed analysis of the driving forces within the environmental movement and the key challenges that it faces He begins with a concise history of the movement in the United States where he identifies four successive waves of environmental thought and action

The first wave conservation emerged in the mid 1800s and focused on the responsible use of natural resources and the preservation of isolated tracts of wilderness

By the 1960s the general public had become aware of the widespread impact of environmental problems on human health and welfare

A concern for the containment of industrial society's environmental degradation emerged

This second wave was followed by a period of cooptation beginning in the 1980s as a now popular social movement made a significant impact on public policy and witnessed the dilution of its goals

Thiele largely focuses on the fourth and current wave of coevolution

Coevolutionary thought and action is grounded in the interdependence of humans and nature in a global context

With the goal of sustainable development in mind contemporary environmentalists argue that human livelihoods must be integrated into complex and evolving ecological systems

This affirmation of coevolutionary interdependence has brought coherence to an inherently

diverse social movement Through extensive interviews and a critical study of environmental publications and scholarly research the author provides an inside look at the environmental movement His analysis illuminates the social economic political and cultural forces that shape the environmental movement today and set its trajectory for the 21st century Anyone interested the future of environmentalism will find this book an invaluable guide Selected Readings in Problems of Population (Social Relations C-711) Carnegie Institute of Technology,1941 **The Role of Ecological Chemistry in Pollution Research and Sustainable Development** Ali Mufit Bahadir,Gheorghe Duca,2009-08-10 Sustainable Development has become the leading concept of the 21 century It describes a development which agrees with the needs of the present generation but does not endanger the chances of the coming generations to satisfy also their needs Sustainable development has become an important general goal for all fields of life like economy ecology and social balance The development and shaping of our future has been discussed internationally like on the summits of the Conferences in Rio and in Johannesburg But this is also a topic on national base in various countries Leading authorities in various fields of economy and politics have also accepted this concept Although the concept of sustainable development has been generally accepted there are still problems how to achieve and evaluate these general goals It is clear that the definitions about the prime needs vary from man to man from country to country and from continent to continent But pollution does not respect national borders Therefore it is necessary to develop the politics of economy ecology and social demands by a synergistic way that they are strengthened by each other If it is not possible to stop tendencies which threaten the future quality of life the cost demands of societies will dramatically increase and negative tendencies will become irreversible **Catalog of Copyright Entries.
