The Economics of Residential Solid Waste Management Thomas C. Kinnaman, Don Fullerton, 1999. This paper provides a broad overview of recent trends in solid waste and recycling-related public policy issues and the economics literature devoted to these topics. Public attention to solid waste and recycling has increased dramatically over the past decade both in the United States and in Europe. In response, economists have developed models to help policy makers choose the efficient mix of policy levers to regulate solid waste and recycling activities. Economists have also employed different kinds of data to estimate the factors that contribute to the generation of residential solid waste and recycling and to estimate the effectiveness of many of the policy options employed.

Don Fullerton, Thomas C. Kinnaman, 2002. The market for residential solid waste management and disposal has experienced dramatic changes over the past 20 years. This collection of outstanding published research examines these changes and thoroughly analyzes the strategies popularized by municipal governments over the past two decades. Kerbside recycling, unheard of in the 1970s, is currently available to 46% of Americans. Thousands of towns across the nation have also implemented user fees requiring households to pay a fee for every bag of garbage they generate. These policy shifts have attracted the attention of environmental economists interested in knowing the best strategy for managing solid waste. The editors, both long-time scholars of these trends, offer theoretical solutions for the optimal pricing of garbage and recycling collection. They provide original data collection and suggest appropriate econometric techniques that correct for statistical biases. A policy focus provides information relevant to municipal governments as well as researchers. This excellent volume will be useful for policymakers, students, and scholars in environmental economics.

Waste and Recycling Takayoshi Shinkuma, Shunsuke Managi, 2011-04-06. As business as usual has become the mantra of today's world, it's unlikely to see a

decrease in hazardous waste generated from greater economic growth Written by renowned experts the book suggests a solution supported by theoretical arguments to this waste problem The book discusses how main problems for waste management can be addressed through appropriate policies adopted by governments in OECD countries The book also raises thoughtful questions on how household waste management services should be privatized and who should pay for the disposal and recycling costs It attempts to answer these questions The book considers several factors hindering the first best optimal outcome and highlights two crucial ones It elaborates further with models and the solutions on how to overcome these obstacles The book covers not only traditional resource economics and waste management but also the recent problem of Electric waste E waste and illustrates in details how the environments of developing countries are inevitably polluted even with the Basel ban Amendment in place The book proposes an alternative international trading regulation to address E waste This book will certainly appeal to industry decision makers policy makers and legislators

Waste and Environmental Policy Massimiliano Mazzanti, Anna Montini, 2011 This research deals with the increasingly complex issues of waste generation waste management and waste disposal that in less developed industrialised countries present diverse but critical concerns It takes a socio economic and policy oriented perspective and provides empirical evidence at EU and regional level The EU and Italy are taken as relevant case studies given the disparities in environmental performances between less and more developed areas The rich and various empirical evidence shows that a robust delinking between waste generation and economic growth is still not present thus future policies should directly address the problem at the source by targeting waste generation in EU countries Some structural factors like population density and urbanisation present themselves as relevant drivers of both waste management and landfill diversion Nevertheless economic and structural factors alone are not sufficient to improve waste performances Though waste policies are to be redesigned by covering the entire area of waste management some first signals of policy effectiveness are arising This work will be of most interest to those students of environmental economics and environmental

sciences as well as policy makers waste utility managers and companies in the waste management sector
