Economy And Environment In The Caribbean:

Economic Policy and the Environment Mark D. Griffiths, Bishnodat Persaud, 1995 **Economy and Environment in the Caribbean** Bonham C. Richardson, 1997 Bearing in mind the recent renewed interest in the economic and environmental problems of small islands everywhere this is a highly appropriate time to bring back to world attention the issues of that time which served in large measure to define the patterns of development in Barbados Grenada St Lucia and St Vincent in the early decades of the twentieth century A book especially to be welcomed David Watts University of Hull England A seminal contribution Lucid erudite and highly readable David Barker University of the West Indies Mona Jamaica In this historical geography of the British colonies of Barbados and the Windwards St Lucia St Vincent and Grenada Bonham C Richardson describes the economies environments and societies of the four geographically dissimilar islands and outlines the severe economic depression they experienced following the 1884 plunge in London sugar prices and the exacerbating effects of two catastrophes a massive hurricane in 1898 and a volcanic eruption in 1902 In response to these problems the British parliament created the 1897 West India Royal Commission to outline a new policy for the islands development Concentrating on the years between 1880 and 1905 Richardson makes use of unpublished archival records local newspapers and records of the Royal Commission to explain the enormous changes in land use patterns in the British Caribbean In a novel approach Richardson emphasizes the effects of the islands physical environments and devotes chapters to climate waters lowlands and highlands He also demonstrates how these environmental zones and resources were contested by different socioeconomic groups leading him to one of his most provocative arguments that depression induced demonstrations and riots in the islands in the late 1890s in large part precipitated the Royal Commission s wise decision to advocate the break up of sugarcane plantations into smaller shareholds Thus Richardson demonstrates the ways in which working people far from being victims of colonialism managed to influence British decision makers such that each island developed a unique adaptation to the economic and geophysical stresses placed on it proving fruitless the British attempts to regionalize the islands under a single policy Throughout Richardson s discussion of insularity and islandness is important to understanding problems in the Caribbean today a century later and will be of interest to geographers and historians of the Caribbean and to anyone with an interest in small island economics Bonham C Richardson is professor of geography at Virginia Polytechnic Institute and State University His most recent book *The Caribbean in the Wider World 1492-1992* received the Gordon K Lewis Award in 1993 from the Caribbean Studies Association *The Economics of Sustainable Development in Small Caribbean Islands* Dennis Pantin, 1994 *Economic valuation and policy priorities for sustainable management of coral reefs* Mahfuzuddin Ahmed, Chiew Kieok Chong, Herman Cesar, Herman S. J. Cesar, 2004 **The Caribbean Blue Economy** Peter Clegg, Robin Mahon, Patrick McConney, Hazel A. Oxenford, 2020-10-22 The Blue Economy is emerging on the global scene as a powerful and persuasive new concept for sustainable development based on economic activities associated with the ocean Several

regions globally have adopted this concept at national and regional levels including the Caribbean Given the complex multisectoral and multilevel nature of the Blue Economy it is clear that different approaches will be needed for different regions Hence this volume explores the opportunities threats and risks involved in operationalising the Blue Economy in the Wider Caribbean Region defined as northern Brazil to the USA and all mainland and island countries and territories in between The first part of the book looks at where the region stands in the global picture regarding adoption of the Blue Economy and what is planned The second set of chapters examines key crosscutting issues such as ecosystem services climate change and governance at national and regional levels that could make or break the Blue Economy initiative The book then goes on to explore the main sectoral activities that will constitute the Blue Economies in the region fisheries tourism shipping and transport renewable energy oil and gas seabed mining and waste management are all considered The book ends with a synthesis of the political and technical requirements to overcome threats and take advantage of opportunities in the Blue Economy

[Economic Development of Caricom](#) Winston H. Griffith,2021-10-12 It has been suggested that if CARICOM nations wish to accelerate their development they should embrace laissez faire economic policies However laissez faire economic policies have reinforced the very economic and social structures that have contributed to their low level of development furthermore laissez faire economic policies ignore social attitudes that can

greatly influence a nation's development. Moreover, low skilled labor intensive production processes which once propelled growth in CARICOM nations will no longer perform a similar role because production processes are becoming more and more knowledge skills intensive and nations wishing to attract foreign manufacturing investment or high tech services may not be able to do so without an adequate pool of the necessary knowledge skills. CARICOM nations must therefore try to accumulate a pool of knowledge skills that can help their economies become internationally competitive. The Global Economic Crisis and the Developing World Ashwini Deshpande, Keith Nurse, 2012. The world economy is currently in the throes of a global economic crisis reminiscent of the great depressions of the 1930s and the 1870s. As back then the crisis has exposed the major structural imbalances in financial and credit markets in addition to global trade forcing many governments developed and developing to impose debilitating austerity measures that are exacerbating the structural weaknesses that caused the crisis in the first place. This volume offers historical insights into the origins of the contemporary crisis as well as detailed analyses of the financial and trade dimensions, an assessment of the technological and innovation context along with perspectives on the implications for unemployment and gender imbalances. Transactions at the Conference on Environmental Management and Economic Growth in the Smaller Caribbean Islands William S. Beller, 1979.
